39946. Did you bring any evidence of it before the Commission on Arterial Drainage?—No, but it was brought before the County Council, because it was thought the County Council might take steps.

39947. Mr. O'KELLY.—Did they take steps?—I believe they did.

39948. To bring it before the Commission on Arterial Drainage?—Mr. O'Loughlin, here, might say.

Mr. O'Loughlin.—The matter was brought before the County Council, but it was stated that there was a rule in existence that the County Council had no right to interfere with it, and some of the members brought it before members of the Drainage Board, and they did not think that that lake was included at all in the sphere of operations.

Mr. O'KELLY.—My question was as to whether the Clare County Council was asked to give evidence before the Arterial Drainage Commission.

Mr. O'Loughlin.—There were two men appointed to give evidence, and they appeared before the Arterial Drainage Commission.

Mr. O'KELLY.—Did they give evidence on this?

Mr. O'Loughlin.—I do not think they touched that district at all.

Mr. O'KELLY.—What did they represent?

Mr. O'Loughlin.—I think they gave evidence about Scariff.

39949. Mr. O'KELLY.—As I understand, the Commissioners were asked for evidence in connection with the floods, and they did not get it?—No, sir; I think not.

39950. Mr. KAVANAGH.—At what date was this resolution sent up to the County Council?—About two years ago.

39951. Mr. SUTHERLAND.—What is the area of the lake?—Well, I did not ask that of the engineer.

39952. How many miles is it, about?—About two miles.

39953. Ballycullinan Lake is in the watershed of the Fergus. Does the river flow from it or into it?—From the lake.

39954. What is the name of it?—There is no name presently.

39955. Is it Ballycullinan—is it the river that flows down here (*indicating*)?—No, sir, it is not. This is flooded by the mountainy river.

39956. What is the river that it flows into?—It flows into the Fergus River.

39957. Mr. KAVANAGH.—When the land is not flooded is it in the occupation of anybody—can anybody use it, and is it in use?—Oh, it is. It is cut for meadow. Sometimes the flood takes the meadowing away, and the greater portion of it cut for meadow; there is another portion that is held as commonage.

39958. Most Rev. Dr. O'DONNELL.—You have stated that this particular question of drainage was not placed before the Drainage Commission?—I am afraid not.

39959. But at the same time you know, I suppose, that the findings of the Drainage Commissioners in their report would apply to a case of this kind?—Yes, I think so.

39960. Mr. KAVANAGH.—Have you any other point, Mr. Casey?—No.

Mr. ERNEST BROWNE examined.

Mr. Ernest Browne.

39961. Mr. KAVANAGH.—What district do you wish to give your evidence about?—Well, not any particular district. I think I wrote to the Secretary sending my precis of what I should like to give evidence about. I am connected with one or two estates that I think are congested more or less, but I do not want to go into particular estates. It was more the division of land into small economic holdings so as to keep labour in the country and the want of land for that purpose and how to get it.

39962. Are you the agent of an estate?—I have got an estate myself in Clare, and I am agent for Colonel O'Callaghan, of Bodyke, and I am agent for the Westropp estate, and I am agent for the O'Shea estate, and I suppose about five estates in Clare.

39963. Then you speak as a landlord and an agent, too?—And a farmer. I am farming about 2,000 acres for the last twenty-three years in five counties.

39964. Most Rev. Dr. O'DONNELL.—In the 2,000 acres that you farm, is a considerable portion of the land under tillage?—Where it is necessary. In one farm I have of about 210 acres, I have twenty-eight Irish acres under tillage. I am speaking in Irish acres. I understand Irish acres better than English acres. Of course the proportion is five to three. Three Irish acres are five English acres.

39965. How many acres in all of the 2,000 would be under tillage?—It varies; not so much now as it used to, but in all, I suppose, fifty Irish acres.

39966. I just wanted to get that fact before you proceeded with your evidence?—Yes. What I intended to say was more from my own experience, what I wished to suggest to the Commission as to acquiring the necessary sort of land, how to divide it, and what my ideas are about dividing. I am quite in favour of making economic holdings, especially in cases where large holdings are surrounded by very small and uneconomic holdings, and where those large holdings are of the type that can be used for mixed farming, just what we want to introduce into this country. We want more tillage on tillage land. I do not hold at all to go into the heavy fattening lands of Limerick, Meath, Kildare, and Westmeath, that you could divide them into small economic holdings, because they are not good for tillage. They are too heavy. It is no use trying to till them. They turn into a very heavy state, and you cannot break them and till them, and the crop is not satisfactory.

39967. Mr. KAVANAGH.—And also they are necessary for the cattle trade of this country?—Quite necessary, sir, that we should have such lands for finishing the cattle by grazing; and it is also absolutely necessary that we should have small holdings for tillage purposes, and I think Providence has made such holdings, plenty of them; suitable for all we can supply the cattle with if we fed them better in the winter. But we do not, because we do not till, and if we tilled we would employ more labour.

39968. Mr. O'KELLY.—Have you seen the work carried out by Mr. M'Cann in the County Meath?—No, I don't know Meath. I would not like to speak from any experience of Meath. My experience is all of Munster.

39969. You have remarked upon the heavy quality of the land in Meath. Was that by experience?—No; but I know from the knowledge I have gained upon about 4,000 farms of land valuing that there is in Limerick heavy land and in Meath heavy land. Of course there is more limestone in Limerick, and there is a heavier soil. I should think not so deep even in the County Meath.

39970. You think it impossible to till these lands?—Not impossible on the fringes, but impossible on the fattening portions of land. Dairying land is a rich land which requires more subsoil, but not as much heavy clay as purely fattening land.

39971. Mr. SUTHERLAND.—Is there geologically fattening land?—Of course. It is a heavy, deep

soil with limestone. There are many types of fattening land.

39972. How do you know it is fattening land?—Because I have fattened on it.

39973. Is there a special category of land which is by nature fattening land?—Certainly.

39974. In my country cattle have been fattened on some of the poorest land?—Then it has some quality in it.

39975. No, but small holders fatten cattle for the market?—Do they give them any help in the way of feeding?

39976. They till their land and could not that be done in Ireland?—Of course.

39977. If the feeding can be done in another way, why are you keeping this land in Ireland waste?—It is not waste.

39978. But it is not cultivated?—But you need not put a 10-stone horse to carry 15-stone. The 10-stone horse is very useful for its own purpose, for the light weight for which it is suited. It is exactly the same thing with land. You want certain portions of tillage land and you want certain portions of fattening land.

39979. You must have this land, which is the very best land made by nature for work, let lie waste if this system of non-tillage is to be kept up?—No, sir; I think that there is plenty of tillage land—leave aside your fattening land—to support the carrying power of Ireland if it is tilled. There is plenty of fattening land to finish the beasts up to the carrying power of Ireland also. And this I can assert from my personal experience that if you turn down the surface of essentially fattening land with the spade it will not recover itself for twelve years or fifteen years or twenty years. Now, that is my experience as a practical farmer of a type of fattening land.

39980. You say "essentially fattening land." You assume a certain thing?—I do not assume it. I know it.

39981. It is an assumption to me. It is contrary to my experience. Our difference lies in that. You assume that it is calculated to fatten cattle and to do nothing but to fatten cattle?—I do not say that it is calculated to do nothing but fatten cattle, but that it is best fitted. I have land in this county that is essentially tillage land and it is only worth 25*s.* the Irish acre—that is about its value. Well, I have other land worth 50*s.* the Irish acre, and I can grow better crops on my 25*s.* an acre land than I can on my 50*s.* an acre land.

39982. If the 25*s.* an acre land is better land than the 50*s.* an acre land the whole question is solved?—For tillage, mind you. I know Scotch farming, and I studied Scotch farming for two years in Forfarshire. I was with a farmer called Lindsay who had in Forfarshire 1,600 statute acres for which he paid 16*s.* an acre. I would not give him 10*s.* a statute acre for it. That man fattened his cattle with the help of cotton cake, and he also put his cattle indoors in the winter and fed them well.

39983. He was turning the land to the best advantage?—But it is tillage land, the same as there is dairying land, and the same as there is fattening land, and everyone here that hears me knows that it is the case in Ireland that there are essentially tillage land, dairying land, and fattening land.

39984. It is a justification of the present system, and I think it is rather a justification of more than the present system?—I do not justify the present system at all, but I do not think we have half enough tillage farming, but they do not treat their land as simply and merely tillage land, and they do not go through the rotation of tillage to enable it to recover itself. My opinion is that the size of an essentially economic holding would be 25 Irish acres, that is about 42 statute acres.

39985. Mr. KAVANAGH.—Do you say that of the whole of Ireland, or only of the County Clare generally?—Well, of Munster I am really talking, of course. Twenty-five acres of suitable land.

39986. Mr. SUTHERLAND.—Which of the six or seven categories?—I cut out fattening land altogether, because fattening farms should not be less than 50 or 100 Irish acres. If possible I should like it to be 500 acres, but it should not be less than 50 or 100. I wish I had some fattening land. I would give £3 an acre. It would suit me down to the ground; because I have no fattening land, and I have plenty of tillage and dairying and storing land.

39987. Anything to keep you going?—No. Anything that I can fatten my cattle on.

39988. Then you want to be saved labour and expense?—I do not want to be saved labour at all. One of my recommendations is that if you want to keep labour in the country you must have 100 acres at least to keep four men. There is the Golden Vein in the County Limerick, of which I wish I owned some. There is the Meath fattening land and the Kildare fattening land, and there is some here in Clare, but not much.

39989. Where?—I think there is some out here belonging to Mr. MacNamara. I think that is here, but I have not seen it. I think it is out towards Lisdoonvarna way.

39990. Mr. KAVANAGH.—He gave evidence about it this morning. He mentioned it?—And is that essentially fattening land in the Golden Vein suitable to be turned down with the spade?

39991. The Golden Vein?—The Golden Vein—thousands of acres. I don't believe there is an acre of it suitable for tilling.

39992. Twenty-five years ago there was not a single acre of it tilled?—No.

39993. We had evidence to that effect?—Here and there there are fringes.

39994. But Mr. Finucane stated that before he left Ireland for India so many years ago he saw 100,000 acres of the present Golden Vale in tillage*?—I remember the Golden Vale myself twenty-five years, and I saw it during twenty-five years, and the average is one to one hundred tilled. Before that time when the people of this country lived on potatoes and milk—and I should be sorry that they should ever live again in the way they did in those days—they might have tilled it with spade work.

39995. Most Rev. Dr. O'DONNELL.—Do you not think that there was a great deal of the land here under tillage, when wheat was sown?—Yes, and it ran out the land. There is wheat land and there is barley land. Wheat land is stiff clay. Barley land is more friable. Wheat land will grow wheat, but not grass so well, and wheat land was in those days always burned, because they had not stock in those days and manure to nourish their wheat, and they burned their land, and burnings of eighty years ago are still telling on the land at the present day.

39996. Of course, such a system is most injurious?—Most injurious. They do it in the east of France, where they grow thousands of acres of wheat and have no live stock. They rake up the surface every year and burn it.

39997. How much do you think of the land called grass land in Clare would be of the class that you call tillage land?—I think that would be easily found out.

39998. But I think you are coming to tell us that there is a large proportion of the Clare lands which under the best economic system should be under cultivation?—I should say one kind. Say a man had twenty-five acres, I think that to support him and his family decently and fairly, with ten cows winter and summer, and with that 25 acres properly treated on medium lines, not going to extremes one way or another, certainly 2½ Irish acres ought to keep the right sort of cow if he fed in the winter, and he should keep six acres out of the twenty-five in tillage.

39999. And what would you call tillage—would you include artificial grasses?—No, I am talking of roots and oat crops.

40000. You would not agree that a man could make a decent livelihood with one acre for tillage and the land for three cows?—It is a small holding.

40001. What would you say to twenty-five acres?—I should think about six acres in tillage.

40002. Under cereals?—And oats.

40003. And root crops?—And a root crop, say, 2½ acres, and turnips and mangels; 2½ acres of potatoes, and the balance in oats, which would be, of course, in usual course, a meadow the following year.

40004. And would all the twenty-five acres come under such rotation?—Whatever was necessary of it, and, of course, if it is tillage land the land would be all the better for being gone over every ten or twelve years.

40005. Would you put the whole twenty-five acres through the rotation of crops?—Certainly, if it is all tillage land. If it is all suitable for tillage and can be improved by tillage.

* See Appendix to the Third Report of the Commission [Cd. 3414, 1907], page 113, Question 15508.

June 3, 1907.

Mr. Ernest Browne.

40006. But with a rotation of crops it would not follow that a good deal of it would not in the usual course be under grass?—Yes, it would also be under grass, and if a certain margin of the rest was not tillage land there is sufficient manure from ten cows if they are properly fed in the winter on the tillage, you know, to topdress what land you would have for meadow.

40007. And would your farmer of twenty-five acres stall-feed his cattle?—I am talking of dairy cows.

40008. Mr. SUTHERLAND.—But then what would he do in the winter—would he stall-feed them in the winter?—I would put them in at night in the winter. I had my own out on the 1st of May this year. I put them out, say, on the 10th of May, and they never come in again till about the 20th of November.

40009. But between November and May?—Always in the house at night, and out in the day.

40010. And would not you have to stall-feed them then?—Well, they give them hay. If you till I say you feed your cattle a great deal better in the winter, but I know lots of men of forty or fifty cows and they have not half an acre of tillage.

40011. Most Rev. Dr. O'DONNELL.—The advantages seem almost obvious of a system of tillage such as you mention, but how would you get the land into the hands of the occupiers?—That is what I should like to come to.

40012. Mr. KAVANAGH.—First of all, you are in favour of enlarging small holdings?—I am, sir.

40013. And of giving a man twenty-five acres as a fair economic holding?—I would not like to have less than twenty-five Irish acres.

40014. Then is there land available as far as we know in the County Clare for that purpose?—I think there is a great deal of land available if you take it in this way—how to get the land and how to divide it. Where a landlord or a large farmer, for example, has got land in the County of Limerick or Clare, and where either of the owners neglect their land and do not give sufficient employment to properly treat their land and to use it up to its carrying power, I would take away, with compensation, such land as was not being properly worked with the labour employed. That is my theory. There is a lot of land, and it is a shocking pity, I think, in this county and neighbouring counties not properly worked. They are not carrying up to their full carrying power. They are robbing the country of its taxable capacity.

40015. Do you consider that if the owner or occupier is manifestly not making proper use of the land the public authority ought to step in and compensate him and take the land?—Yes. I think it is a great hardship that a small tenant or labourer or farmer should have to go to America when he sees alongside of him, over the fence, a farmer or landlord who has 100 or 200 acres of land, say 100 Irish acres of land, which ought to carry thirty-five or forty cows, not doing so owing to the way the land is treated. It is carrying twenty-five cows, and it is robbing the country of the balance—of the support of ten cows, what it is worth to the country; and the man says: "If I had thirty acres I could live on it and keep ten cows on it." And I think that would make those farmers employ more labour. They will employ as little as ever they can. They are just the same in their treatment of the poor labourer in Germany. They will employ him only as little as they can, to work on off days and turn him out in the winter.

40016. Then you think it should be turned to better account than it now is?—Yes.

40017. Then you are coming to your main point, which I understand to be that, from the nature of the soil, certain large tracts should be under cultivation?—Should be under cultivation, for they are not giving what they should be able to give, and that should be done in rotation, and that can only be efficiently done by small men. Take the case of a man with 100 acres who keeps four men. That man can till twelve to fifteen acres of land with three horses and treat it well. Take the case of a 400-acre man who keeps three men or a herdsman and two dogs, as I heard a witness say; if most of his land is like tillage land it will return to moss. It must be tilled and must be sub-soiled. There is no man who can do that but the small man and his own family. You will keep that man and his eldest son in the country here.

40018. And you would give him a fair inducement to stay?—Yes, I think he could get a respectable living on it.

40019. Mr. KAVANAGH.—From your own knowledge of the holders of that sort—take the twenty-five-acre man—how much does he till?—I cannot say about Clare, but in parts of the County Limerick, Pallaskenry and up to New Tipperary, which is land meant for tillage, or King's County, which is barley land, or Kilkenny or Queen's County, the small farmers till a suitable quantity; they go through the land just as I say. They are fond of their land, and they do it from time to time, and they go through that thirty acres in eight years.

40020. Would you say that they do so in the country here?—No; although it is better here than in some parts of the County Limerick.

40021. Suppose you enlarged the holdings to twenty-five acres would they continue to do so?—I think the twenty-five-acre man always treats his land better than any other man.

40022. What is the average holding about here?—It is very hard to say what the average is, because there are lots of holdings here that are very small and there are holdings that run to the mountain and they may be valueless.

40023. Not the mountainous country but here?—Well, the cultivation of this country might be better. I am speaking more of East Clare.

40024. But it seems to me that the whole county is under grass?—So it is, and so it is in the County Limerick.

40025. And yet the farms, I should say, were very big, I should say fifty would be the average?—It is more than the average, but this county is a very up-and-down county. There is a lot of rocky land that cannot be tilled, and there is a great lot of bogland, and you must discriminate in land.

40026. Most Rev. Dr. O'DONNELL.—You cannot go by acreage?—You cannot go by acreage.

40027. One obvious advantage from the introduction of tillage on the scale you contemplate would be this, that those who have now small uneconomic holdings would have their holdings enlarged to such an extent as to give in Ireland a very convenient outlet for the labour of the family?—Of course. Yes.

40028. Suppose we have acquired land which should be split up for the enlargement of holdings, and suppose the holdings were enlarged, now would you not consider that there should be a system of general instruction of a practical kind to teach the occupiers of the enlarged holdings the best class of agriculture on those holdings?—Of course the knowledge would come much faster, and I think the rising generation will see that for themselves.

40029. Would you contemplate some sort of public premiums or prize system for well-kept farms?—Anything of that kind that would arouse an interest in the work. But I would rather have a system of Government bonuses.

40030. Would you be in favour of having the boys in the district from their tender years taught the lighter operations of farming?—A technical knowledge of farming, certainly.

40031. So as to give them a taste for tillage employment?—Yes; I think it is absolutely necessary that the son of a farmer who means to be a farmer should learn his profession the same as a doctor learns his.

40032. If instruction of that sort were introduced the tendency to till might be increased?—Undoubtedly it would and to till in a good way, and not only to manure the land but they would go in for other things still that are certain to pay; not merely such instruction as you get on a dairy farm. Take these large dairy farms in the County Limerick. You simply go out there with your hands in your pockets and look at the girls milking the cows.

40033. Mr. SUTHERLAND.—Is not that characteristic of all grazing farms?—Yes. I say it is because they won't feed in the winter. How can a man with 100 acres of land feed his cows?

40034. I asked the same question, and my answer to it is because he does not till the land?—Because he does not till the land, and he should till it. Because the large farmer will not employ labour. And I would make him employ it, and if he did not employ it and keep his farm right I would make him do it. That is the only way, to make him do it.

40035. Most Rev. Dr. O'DONNELL.—On this farm of twenty-five acres there would be employment for the boys and girls?—Yes.

40036. And there would not be any tendency to

encourage notions of idleness?—They would have plenty of work if they tilled. A tillage farmer must work all the year round, and there is no more interesting life in the world than a farmer's life if he takes an interest in it.

40037. I think you were about to explain how the land was to be got for the purpose?—Yes. I think that wherever you see these large farms not properly treated you would have to get power to do it. I would inquire why that man does not properly use his farm, and if he does not give any excuse or does not use it properly I would offer him a fair price for it. I tried that in thirteen or fourteen cases myself, and evicted the tenants that I had. And before this eviction thing came there was a great complaint I had to make. I went to some of these people. I knew some of them had been industrious fellows, and now I am glad to say they are all back again. Some of them had gone back before the Estates Commissioners took it into their heads to go in for evicted farms, and some of them had not, and in the case of any of them that had not I proposed that the tenant and I should write to the Estates Commissioners; and we wrote to the Estates Commissioners, and it was very unsatisfactory both to the tenant and myself, and of course any landlord or any gentleman looking, from their point of view, to a deal in business would expect that a body of men like the Estates Commissioners would be people that you could deal satisfactorily with. But first of all they take ages and ages in correspondence, and many a time they don't answer your letters, and you never come to any finality about anything. That is my experience. I have had to reinstate tenants off my own bat on that account, and they cannot get their grant. I would like to see the tenants get a free grant to stock the lands.

40038. Are all your evicted tenants back?—All of mine are back except on Colonel O'Callaghan's estate, and their rents were scaled down to the same level as the rents of the men around.

40039. Before the 1903 Act?—Oh, yes, long before.

40040. What is their status now—future tenants?—No; eleven months' tenants, living on their holdings.

40041. How were the rents fixed?—We fixed them by comparison with the second-term rents of the neighbouring tenants.

40042. They are on the same scale?—They are on the same scale, and they have agreed to it. Of course it would be much better to have them properly in their holdings.

40043. And how long would it be till that?—From the sale of the estate, when it takes place.

40044. If the estate were sold to the tenants would they be put, so far as you are concerned, in exactly the same position as the others?—Exactly the same as far as I am concerned, and buy at the same price. They are all second term tenants on the estate.

40045. You convey to the Commission that since the Act of 1903, when evicted tenants were being restored there was some delay in the offices of the Estates Commissioners?—Yes. I have one or two cases. I give you one case that occurred with me. I take a case in this county of a tenant whose father died very much in arrears. The son was evicted by my father, who was the agent for the estate. I knew the son to be a decent fellow, and he wanted to live in the country and do work, and I went to him and said, "We will try to make a settlement if we can." The old rent was £36 a year, and I said to him, "I think £24 a year is a fair rent," and he agreed with me, and he said "that is about the value," and I said, "I will reinstate you at £24 a year and you buy at 24½ years' purchase as a second term tenant." That was giving him 4*s.* off that £24 a year, bringing him down to £19 10*s.* as the future rents that he would pay, and he was quite satisfied, and very thankful as well. And, of course, he served notice on the Estates Commissioners, so that when he went in he should have a grant to stock the land with, and they sent an Inspector, and the Inspector used to be a tenants' valuer, and I think he is a very good judge of land, and he came down and he said, "I think we will get this man the grant," and he walked the land and he said "I think this is worth only £22 5*s.* a year; that is my valuation of it." I said, "We have both agreed on the other, and I think it is a fair price," and he said he could not recommend it, and I said "I will consent and take off the £1 15*s.*, making it £22 5*s.*," and that was fixed, and then I got a letter from the Commissioners, "You must reinstate this tenant" (this was last October), and I said, "I have reinstated him from the 1st of November." I thought it was unfair that the tenant should be reinstated when he could not make anything till the 1st of May, and I said "Don't go in till the 25th of March," and I told the Commissioners I would make him a second term tenant from the 25th of March following, and I would leave him as caretaker in the meantime, and sign his judicial agreement on the 25th of March. And we conformed to the rules, and then I was informed that they would only give 23 years' purchase for the holding, and that I would have to throw in bog as well, and I said, "You are not treating me fairly at all, and the tenant will have to go out, and the onus will be on you." I said, "This is a warning to me how to deal with you, gentlemen, again." But I was not going to destroy the tenant, and I gave way and knocked £60 off the purchase price which the tenant agreed was a fair purchase price, and it reduced his rent from £36 to £16 5*s.* And then they said, "We will now give him a grant of £120—£90 for young stock, and the balance for implements"; and he came in on the 25th of March and signed his agreement, and everything was conformed to. And I said, "When do you think you will be able to stock your land," and on the 8th of May there was a fair at O'Brien's Bridge, and I wrote to the Commissioners to send down a man to purchase him the cattle, as that was the best opportunity he could have for getting seven or eight cows and a horse. I went out the night before, but the Inspector did not come, and there was not a sign of a man down to get the cattle on the 8th of May, and I and the tenant wrote collectively to the Estates Commissioners, and the last thing was a letter saying that they had been unable to do so. I think it is harassing in the extreme.

40046. Apparently up to the 8th of May the Commissioners looked after the interest of the tenant, but since that they have not done anything?—They have not done anything. That is so. I cannot deal with them again. I will never touch them again. I will not deal with them again if I can help it. I will give you another case, a case of a rent of £200 a year in which they have left me stuck. I went security to the landlord, and the tenant went in, and the rent and the purchase price were all agreed to, and they wrote me a letter which I think I will read out:—

Estates Commissioners' Office,
25 April, 1907.

Estate of Rev. J. T. N. Lee.

Sir.—I am directed by the Estates Commissioners to inform you that they estimate the price of the land in the townlands of Killonahan and Killanahan, containing 390 acres at £5,629. If the owner is prepared to sell at this price, and if the Commissioners can arrange to re-sell the land to suitable persons, they will, in the event of proceedings being instituted under the Irish Land Act of 1903, be prepared to advance that price (which is exclusive of such bonus as may be payable according to law), and they will be prepared to declare the lands to be a separate estate. I am to add that this estimate is furnished solely for the information of the vendor, and is not to be taken as a formal offer to purchase."

40047. Was that tenant reinstated?—I put him in according to their instructions on the 1st of May, and I told the landlord "everything is right, and the rent is £200 odd a year, and will be payable on the 1st of November next"; but the Commissioners say, "We have not bought this estate." Where am I going to get my half-year's rent from? That is now looking at it from the landlord's point of view. There is a case where the landlord through taking the meaning of the Land Act of 1903, re-instated his evicted tenant. We fixed that rent. The Estates Commissioners' inspector was there, and I was, and there was only £15 between us on that whole valuation of that farm, and we got to a settlement on the spot, and he came and went over it acre by acre, and brought it out the same way, and it was agreed on. And there is the position I am in at present. And how can I deal with these people again? I am a member of the Reform Association and in favour of their policy all through, and I am only too anxious to obtain land for anyone that I can; but I cannot do it under the machinery that we have got.

June 3, 1907.

Mr. Ernest Browne

40048. Mr. KAVANAGH.—It is just a little congestion in the office work in Dublin?—I don't know, sir.

40049. I think so?—When you write about the evicted farms, the Secretary answers you. You go to Dublin for an interview, and you meet Mr. Finucane to-day, and if you go up on the same case in a fortnight's time you meet Mr. Wrench, and he refers you to someone else, and then they won't answer your letters for you when you go back. I suppose it is not your duty to deal with the zones?

40050. Mr. O'KELLY.—Say what you have to say about the zones?—In the Land Conference Report it was agreed by the members—Messrs. Redmond, O'Brien, Colonel Everard, and Lord Dunraven—that it be first at twenty-one and a half and twenty-four and a half years, if you do away with the zones

40051. Have you read Mr. O'Brien's speeches?—A good many of them.

40052. Have you read his speech following the Land Conference Report?—I am sure I have.

40053. Have you ever read where he suggested that the number of years was eighteen?—No; I think not. The Land Conference Report was signed by all of them.

40054. Did you agree with Mr. O'Brien's interpretation that the Land Conference Report was eighteen years' purchase?—I agree with the Report of the Land Conference signed by all the parties, and I think it is eminently fair. I have often heard it suggested, reading the evidence of the Commission, that lands were sold at eighteen and nineteen years' purchase under the Ashbourne Act. That is so easily answered—they were all first term rents then. They paid four and a half per cent. interest. Now it is three and a quarter. Now the tenants are all second term. Besides, before that, in most of the estates which were encumbered, the real owner had no interest. They were sold for the mortgagees, who wanted the money.

40055. Do you mean to say that in the past the estates sold were embarrassed properties?—A lot of them.

40056. How many of them?—I could not possibly give the number.

40057. Do you suggest twenty-one and a half years' purchase on first term rents is fair?—Yes.

40058. And you suggest that is the Land Conference term?—It is their price, neither less nor more.

40059. Supposing I suggested to you that eighteen years' purchase represented the Land Conference settlement, would you agree with that settlement?—I would not. In the recommendations of the Land Conference it means 6*s.* in the pound reduction on first term rents.

40060. Most Rev. Dr. O'DONNELL.—I do not fully follow your point about the interest being different under the two Acts?—It means that the tenant had a greater advantage under the last Act. You could not ask the tenant to pay twenty-seven or twenty-eight years' purchase; neither could the landlord accept much less, because his second term income would be reduced.

40061. The bonus was brought in to make up the difference?—Yes.

40062. There were also certain advantages to the landlord in legal expenses?—Yes.

40063. And the re-purchasing of land?—Yes, but it seldom arises.

40064. Come to a place like Clare; you are aware that in the case of purchases by the Congested Districts Board the zones do not apply?—I suppose not.

Mr. O'KELLY.—They don't shut out inspection.

40065. Most Rev. Dr. O'DONNELL.—Well, Mr. Browne, I think you have found that the owners' have experienced no great difficulty in selling to the Congested Districts Board?—I have never dealt with the Congested Districts Board directly, but I have always heard praise of the Board. I have never dealt with them myself. I am personally selling twenty-seven estates. I sold thirteen of these, twenty-one and twenty-four years' purchase is the average price, and I have made out schedules to show how the landlord will stand and also the tenants. Under the twenty-one and twenty-four years the landlord loses from twelve to fifteen per cent. of his present second term gross income, and the tenant gets 4*s.* 6*d.* in the pound reduction on his second term rental.

40066. In this case you have put before us would you consider that the owner is losing anything?—I think it is fair. I would not be losing more than I would, say, lose in a year on law costs or——

40067. Then your income will be secure?—At 3½ per cent. the twenty-one and twenty-four years' purchase will bring me in very near what it is.

40068. Could you not invest at more than 3½ per cent. quite safely?—My trustee would not invest at more than 3½ per cent.

40069. Would you not think it would be possible to get an investment at four per cent. which would be a better security than Irish Land?—I would prefer Irish Land. I think the prospects will greatly improve. I don't see why they should not.

40070. Mr. SUTHERLAND.—Is not the landlord getting his salary paid down?—He will not get it into his pocket. It will be invested by his trustees.

40071. Is it not paid to his trustees?—Yes.

40072. What do you mean by his trustees?—They are nearly all life estates—the estates in Ireland. You have marriage settlements.

40073. All entailed?—Yes. It is all settled property and in the hands of trustees.

40074. Have you any lands in England?—No.

40075. Is it not extraordinary that the lands in England appears to be down in rent compared with Ireland?—Only in two or three counties.

40076. The returns one sees in England seem surprising?—It is about thirty-eight per cent. in the last twenty-five years. In Ireland it is about forty-six, and now they are getting another twenty on the purchase.

40077. Most Rev. Dr. O'DONNELL.—When one compares about the same class of soil?—Because they are English acres.

40078. Mr. SUTHERLAND.—Are the official returns Irish acres?—They are not. I studied dairy farming in Surrey and tillage in Forfarshire. They pay a higher acreable rent than we do.

40079. Most Rev. Dr. O'DONNELL.—One would expect they should, because in Ireland the tenant has a joint interest in the soil?—If they build their houses and drain their lands they have the value of their improvements in their holdings, but the other is a sentimental value.

40080. Mr. SUTHERLAND.—What is the landlord's interest? Is it not sentimental?—If you paid £20,000 in the Incumbered Estates Court for a property, would that be sentimental interest?

40081. You are sufficiently acquainted with the history of Ireland. Have you heard of the Plantations?—That is past history. You have to discriminate.

40082. Where do you draw the line?—I take any country, say England, where the Danes had conquered England and there were the Normans and Saxons. Are you going to bring them in and reinstate them?

40083. That does not come down so far as the 17th century?—None are alive now.

40084. Mr. KAVANAGH.—Is there any other point?—No.

40085. Mr. O'KELLY.—I can quite see that you are desirous of having the evils of congestion removed?—Certainly, and I think it can be done.

40086. It is a source of a great deal of discontent in this country?—Undoubtedly.

40087. Suppose you found it impossible to achieve that result by voluntary sale, would you apply compulsion?—I have thought that compulsion is a terrible thing. There is sentiment in ownership too.

40088. Land is taken compulsorily for other purposes?—You have taken a lot of the rights of landlords, a great lot of the things have gone, including control over their own property. If you take it by compulsion you will have to take it fairly. You must give the average price.

40089. Conditionally that all things are equal and the price equitable and fair?—I don't see why a man should object to selling his property at a fair price.

40090. Mr. KAVANAGH.—I think you said that a man who did not make use of his land that it should be taken from him?—Yes, for his own good and the good of his country he should treat it properly.

The Commission adjourned.

EIGHTIETH PUBLIC SITTING.

WEDNESDAY, JUNE 5TH, 1907

AT 11.0 O'CLOCK, A.M.

In the Market House, Kilrush, County Clare.

Present:—WALTER KAVANAGH, Esq., D.L. (in the Chair); The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Rev. P. GLYNN examined.

June 5, 1907.

Rev. P. Glynn.

40091. Mr. KAVANAGH (*in the chair*).—You are nominated by the Kilrush Rural District Council and Poor Law Board to give evidence?—Yes.

40092. Will you kindly bring before the Commission the statement you wish to make?—Yes, sir. By the Act of 1891, under which the Congested Districts Board was established, it was declared to be necessary, in order that a district or an electoral division be declared congested, not only that the valuation per head of the population of an electoral division be below £1 10*s.*, but that the valuation per head of one-fifth of the total population of the county should be less than £1 10*s.* The result of this was that the County Clare, whose small occupiers and fishermen stood in such need of the fostering care of the Congested Districts Board, have never got any assistance from the Board, for, unfortunately for Clare, although there were in 1891 several electoral divisions in which the valuation per head was under 30*s.*, the population of these electoral divisions did not reach twenty per cent. of the population of the county. I know an electoral division where the decrease in population has been twenty per cent., another where the decrease has been fifteen per cent. in ten years.

40093. Mr. SUTHERLAND.—Is that an electoral district?—Yes, they are both in my own parish. There are still in West Clare many electoral divisions where the valuation per head of the population is below 30*s.* per head. I am glad that at long last the Government has come to recognise that there are "areas outside the districts now scheduled as congested that require to be dealt with as congested." I hope to be able to satisfy the members of this Commission that West Clare is one of the "areas" that should be scheduled as congested, and that some of its population, now crowded in uneconomic holdings, should be transferred to the ranches, from which the people have been driven to make room for cattle.

40094. Mr. KAVANAGH.—Have you any suggestions to make?—I will make suggestions further on.

40095. An alteration of the definition of congested districts, do you mean?—As to that I have heard several definitions. For instance, take Kilkee Electoral Division. There are 209 people whose valuation is £4 and under, there are 116 from £4 to £10, and 165 whose valuation is over £10. Well, if you take the whole of these the valuation would be more than 30*s.* per head of the electoral division. I should say, at all events, wherever you have fifty per cent. of the holdings of the people at a valuation of less than 30*s.* per head that that ought to be declared congested. I put that rather high. I should not be surprised if 20*s.* per head would not be sufficient.

40096. Most Rev. Dr. O'DONNELL.—In 1901 there were four electoral divisions in Kilrush district with the valuation under 30*s.*?—And they are there still. There was more people there then. The population has fallen 11·2 per cent. since.

40097. Mr. KAVANAGH.—Then it is not the valuation you find fault with: it is the amount of population?—It is the fact that in order to have the district scheduled as congested it is necessary that one-fifth of the entire county should be congested. If you take Clare, we have some of the biggest ranches outside perhaps Roscommon, and wherever you have numbers of these ranches, no matter how dense the population may be in certain parts, and where it is easy to get one-fifth of the population under 30*s.*, it is almost impossible, where there are large ranches, to have the whole of the county at 30*s.* per head.

40098. Most Rev. Dr. O'DONNELL.—Twenty per cent. of the population reside in districts of this class?—Yes.

40099. Mr. KAVANAGH.—County Clare, originally, was not scheduled at all?—No, portion of it got scheduled by accident.

40100. It was due to the alterations in the boundary of the county?—Yes, it was.

40100A. When the Local Government Act was passed portion of the County Galway which had been scheduled as congested, and which adjoined the boundary of Clare, was transferred to the County Clare, and that is the only portion scheduled?—Yes.

40101. Mr. SUTHERLAND.—This anomaly that you point out arises from the definition in the Act of Parliament?—Yes.

40102. Have you considered what would be a desirable amendment of that?—I have considered that if you are to relieve congestion. Congestion is quite as bad in a county where there are not ten per cent. of the people who would not be under 30*s.*, quite as bad as in Donegal and Mayo, where there may be fifty per cent. of them, because a man is poor, wherever he is, if he is in a £4 holding.

40103. Then, as to the practical question whether a definition could be framed that would meet all cases?—As far as I am concerned, what I should say is this, that in any county where you have an electoral division in which fifty per cent. of the population have a valuation of not more than 30*s.* per head I would declare that congested. I pass the county altogether as the area, and I take the electoral division. If I get an electoral division—I do not care where—where fifty per cent. of that division does not exceed 30*s.* per head of the population I would declare that congested.

40104. Most Rev. Dr. O'DONNELL.—In two ways you would broaden the definition. You would get rid of the county restriction, and you would be content to look to fifty per cent. of the population?—Yes.

40105. Mr. SUTHERLAND.—Do you know a disadvantage that would accrue to anybody by such an arrangement?—No.

40106. It would be an advantage?—To the small holders.

40107. Most Rev. Dr. O'DONNELL.—What would you think of leaving to the body for relieving congestion the duty of varying the areas wherever the necessity arises?—If it is a body that I have confidence in, such as the Congested Districts Board, I would leave it to them.

40108. And what is your conclusion? That the body, on the whole, should have some general powers?—Yes, my lord. Now, the great object I think that this Commission ought to have, and that every right-thinking man should strive for, is to try and save the Irish people from extinction, and unless something is done in places like Clare there is no question we are in the high way to be as scarce as the red Indian

June 5, 1907.

Rev. P. Glynn.

on the shores of Manhattan. In proof of that I may state that in 1841 Clare had a population of 286,523, in 1901 its population was only 112,159; and, seeing that its young men and young women are emigrating at the rate of 1,500 each year, Clare has to-day not many more than 100,000 of a population, having lost since 1851 by emigration 143,649 persons. These statistics alone should be sufficient to convince the members of the Commission and all who take an interest in the Irish people that if Clare is to be saved from becoming a desert a radical remedy must be applied, and applied quickly.

40109. Your point applies, if we go back, not to the famine years, but to 1851?—Yes, from that date to this we are decreasing steadily, and even to-day, when we are told we are so prosperous and that our banks and post offices have more money than ever before, we are losing the population and the flower of the land at the rate of 1,500 each year.

40110. Without going back to the famine years at all, you have it in the census of 1851 that there were then more than twice as many people in Clare than it has at present?—Yes, nearly one-half as many as Clare has at present.

40111. Mr. KAVANAGH.—How do you think scheduling districts as congested would stop that?—I will come to that in a minute. I am aware that some of our doctrinaire economists attribute Irish emigration to Celtic restlessness, to temperament, to want of amusement, to everything except to the true cause. These gentlemen have never had the experience of living in a one-room or in a two-room cabin, as a member of a family of ten, and on a family budget of some £20 a year. If they had they would be, I venture to say, in as much a hurry to seek a means of livelihood in America as the 1,500 Clare boys and girls that yearly rush to the emigrant ship. What prospect of anything but misery have these emigrants if they stay in Ireland? Give them farms on which they can maintain a family, or give them employment, and you will soon put a stop to emigration. I have been intimately acquainted with hundreds of emigrants, and I do not recollect that it was possible for three per cent. of them to have remained at home with a reasonable prospect of a livelihood.

40112. Mr. SUTHERLAND.—How is this emigration going on at present—is it by families or by individuals?—That is the saddest part of it. If it were by families there would be some hope for the country. Take a family of six, seven, or eight on a holding under £4 valuation, and here is what happens. There is some one of them that is not much good, either a boy or a girl, and he or she is sure to be kept at home. The others, those boys and girls, the flower of the land, get a ticket from somebody in America, or buy one, in ones or twos. The eldest goes to America, and after a time he or she buys a passage for the second eldest. Then they both combine and bring out the third eldest, and the old people and the infirm are left at home—the cripples and the paralytics—and the result is, they are good for nothing. Another result was that in the next parish to my own lunacy is increasing to an alarming extent. People say it is ardent spirits and things of that kind. It is nothing of the sort. It is the least fitted of the population remaining at home.

40113. Is it more prevalent—this individual emigration—now than it was before the famine?—At the famine they had free passages and they had to emigrate *en masse*, but since 1851 it is individual emigration.

40114. Most Rev. Dr. O'DONNELL.—You say 1,500 Clare boys and girls leave annually. That would be one-eighth of the total number of emigrants from Ireland?—Oh, no, it would not. The total number of emigrants from Ireland is about 35,000.

40115. A year?—Yes, my lord. It is one-fifth of our population.

I ought to have said Munster.

40115A. Mr. SUTHERLAND.—You would always look for emigration to a small extent?—Oh, yes.

40116. It is emigration that is lowering the population of the country?—This is not emigration; it is blood-letting.

40117. And the whole population is decreasing steadily?—Yes, seeing we have lost 143,649 persons in fifty-seven years out of a population of 200,000, whilst here in Clare, with healthy air and big families, the population would have been trebled in the same time but for emigration.

40118. Most Rev. Dr. O'DONNELL.—You would not have the least objection to emigration from Clare if the Clare population were kept up to the numbers which the county could reasonably support?—Oh, no.

40119. But you do object to emigration which takes away in fifty years more than half the population?—I not only object to it, but I very strongly object to namby-pamby remedies that might keep a dozen of people in employment. I want something that would stay emigration. With all due respect, I think that is what you ought to address yourselves to, that if we have land or means to keep people at home, you ought to put your finger on that remedy and say: "This country is going to ruin, and the only thing to stop that ruin is so and so." An inspired Apostle has warned us of the hollowness of the charity which tells a "naked destitute brother to be warmed and filled, yet gives not the things which are needful to the body." Equally hollow is the appeal of those who beg of our naked and destitute emigrants to "remain at home," yet "give them not those things which are needful to the body." This dreadful hemorrhage is draining the lifeblood of Ireland away, and is leaving her weakened and debilitated—bankrupt and pauperised—with the inmates of workhouses increasing while the population is decreasing. I will illustrate my contention by the case of the Kilrush Union. I could do so equally well by the case of the Ennistymon Union. The valuation of the Kilrush Union is £53,807, the population of the Union in 1901 was 28,734; the valuation per head of the population is little more than £1 17*s.*, while in the following six electoral divisions the valuation per head is at or under £1 10*s.*, viz., Doonbeg, Dromellihy, Knocknaboley, Einagh, Cahermurphy, Glenmore, and these divisions are by no means the poorest electoral divisions of the Kilrush Union. In some of the electoral divisions the valuation is inordinately high, because of the high state of cultivation that existed in them at the time the valuation was made, when "every rood of ground maintained its man," and also because while the price of the corn crops, which these lands then yielded in great abundance, was relatively high, the cost of producing them was nothing—because labour of the very best kind had then very little value. To illustrate that, I take my own parish. We suffer from that high valuation in two ways. When the Commissioners came along—they know very little about land, I am sorry to say—they go to the valuation. If they find the rent is under the valuation they at once rush to the conclusion that the fellow has his land for nothing, and accordingly they give no reduction. On the other hand they come to a district where there has been improvement of the land and the valuation is very low—no matter how low the rent is they pull it down to the valuation. In 1847 and 1848 the land in my parish was very good for corn growing—I do not know whether it is true of other parts of Ireland, but it is true of West Clare that the lands grew twice as much then as they will grow now. Suppose the land would grow a certain number of barrels of oats or wheat to-day, it would grow twice as much then. Why? Because they then tilled with the spade. There was no ploughing. Ploughing nowadays is just scratching. The people burned the land and thereby ruined it, while the valuation remained the same the whole time. When you consider a district of that kind, where the poor-rate is about 4*s.* 6*d.* in the pound, what between poor rate, and railway rate, and the road rate, some of these people are paying 12*s.* and 14*s.* and 15*s.* per acre for land that positively in other parts of Ireland would be let for 7*s.* or 6*s.* Then when it comes to purchase, you point out to the landlord that the land is worth nothing. He says, "Were not the Commissioners on it?" as if the Commission man was infallible. The result is very disastrous to the poor people.

40120. Mr. SUTHERLAND.—Your position is that the valuation that was fixed at that time is the basis in the mind of the Commissioner from which he is to work?—Yes.

40121. And that that may have been fixed arbitrarily for purposes that are not now so apparent?—Yes. There was a little estate sold in my parish some years ago. During the negotiations the agent

used this argument to me: "Why, their rents are more than thirty per cent. under the valuation, and they dare not come into court, because if they did the rents would be raised." Even there the rents were too high, seeing that in a small estate of £200 a year there were £800 of arrears. If I got one of those farms to-morrow at half the purchase money, I would rather a good deal pay 30*s.* an acre for land than get it for nothing.

40122. That sounds rather paradoxical?—Because I say that the land got burned in the famine years, and any land that got burned and taken away has to be replaced in some way before it is workable.

40123. Most Rev. Dr. O'Donnell.—Spade labour has disappeared?—Yes.

40124. And consequently the land is not as well tilled as before?—Yes, they exhausted the farms.

40125. And as the result of the famine, to try and manure the land they burned it?—Yes.

40126. You call attention to this fact, that in times before the famine, at all events, there was an abundance of cheap labour?—Yes.

40127. It is difficult to get labour of any kind now?—It is nearly impossible, my lord. And the third cause of the deterioration is this. I was talking to a man who has really bad land, and I said, "That is miserable land you have." "Well," he said, "my father took eleven crops of oats out of that field and he never manured it."

40128. Mr. Kavanagh.—One crop after another?—Yes.

40129. It left that land very bad?—Bad from that day to this, and bad for ever, until you turn round and put in some other soil. If the Commissioners came on that land to-morrow, I have not the slightest doubt they would tell anyone that it is very good land. I wish to submit to the Commission some further facts in connection with the Kilrush Union. In Kilkee Electoral Division the number of rated occupiers of £4 and under is 209; over £4 and under £10, 116, while these over £10 are only 165. Killard Division occupiers under £4, 31; under £10, 32; over £10, 57. Clonadrum Electoral Division, under £4, 34; between £4 and £10, 61. Kilmurry Electoral Division, under £4, 80; between £4 and £10, 65. Kilballyowen Electoral Division, under £4, 45; between £4 and £10, 61; over £10, 65. Moyarta Electoral Division, under £4, 76; between £4 and £10, 30; over £10, 41; Rahona Electoral Division, under £4, 76; between £4 and £10, 58.

40130. Most Rev. Dr. O'Donnell.—I think we have all these statistics here in the return before us?—That would show that there are few electoral divisions in the Kilrush Union that might not reasonably and fairly be declared congested, and would be so if what I suggest were brought about, that where 50 per cent. of the population lived in holdings the rateable value of which was not more than 30*s.* per head, the district should be declared congested. From this it can be seen that there are in the Kilrush Union a vast number of uneconomic holdings, there are few employers of labour, and there are practically no industries, there must necessarily be considerable emigration—and so, I am sorry to say, there is. Of course, where you have a man living in a £4 holding, for that matter in a £10 holding, all these holdings are uneconomic, because they will not pay for the labour spent on them, you cannot rear a family on them. What will, however, give the best indication of the poverty of the Kilrush Union is the proportion the number of persons relieved bears to the entire population. Looking at the pages of Thom's Almanac, I find that in 1902—the last year for which the figures are available to me (I am sure the figures for that year differ very little, if at all, from the figures for the year 1906)—the number of persons relieved, indoor and outdoor, in the Kilrush Union was 3,042—indoor, 1,338; outdoor, 1,704—so that one person out of every nine in the Kilrush Union received relief of some kind. The Kilrush Poor Law Board expends yearly on outdoor relief £2,250, a sum equal to 1*s.* 2*d.* in the pound on the valuation; while the total expenditure on poor relief in the Kilrush Union amounts to 3*s.* 0½*d.* in the valuation.

40131. Mr. Sutherland.—Is the number receiving poor relief increasing?—Well, considering that the population is decreasing, the number relatively is increasing, but it is in about the same state as far as actual numbers for the past ten years. What I have said of Kilrush may be said with little variation of the Ennistymon Union, in which the valuation per head is about £2, where the poor rate is equally high as in Kilrush, and where there are two electoral divisions, Clonanaha and Formoyle, where the valuation is under £1 10*s.* per head of the population. In Moy electoral division of the Ennistymon Union there are 123 ratings under £4, and 126 between £4 and £10. In Miltown Malbay, excluding houses in the town, there are 128 under £4, and 119 between £4 and £10. In Ballysteen, 173 under £4, and 108 between £4 and £10. The electoral division of Killiagh is rather remarkable. There are 125 ratings under £4, and 71 under £10; while Mr. M'Namara has some 900 acres of land in the neighbourhood. I am very glad to see Mr. M'Namara is ready to sell all that land to anybody who will buy it for the purpose of having congestion relieved.

40132. It is all a question of price with him?—Well, I think when people want a thing they ought to give a reasonable price. Of the 149 ratings in Killaspuglenane, 59 ratings are under £4, and 53 ratings between £4 and £10. In Ballyea, out of 200 ratings, 51 of them are under £4, and 80 of them under £10. In Ballagh there are only 138 ratings—47 of them are under £4, and 71 of them between £4 and £10. The valuation of the entire electoral division is only £957 13*s.* The valuation of Clooney is £1,168 16*s.* There are 125 ratings—31 under £4, and 50 between £4 and £10. With these facts concerning the unions of Kilrush and Ennistymon before us, does it not seem unintelligible that West Clare was not scheduled as congested under the Act of 1891, even although 20 per cent. of the population of the County Clare were not rated at less than 30*s.* per head? It would be indeed unintelligible if we had not been aware that in 1891 County Clare was misrepresented by a gentleman whose principal anxiety was about Mashonaland, and who was far more concerned about King Lobengula and his subjects than he was about the people of West Clare. The present Commission will, it is to be hoped, do what is in its power to repair the past. There are two classes of persons whose condition is in urgent need of improvement—fishermen and farmers under £10 valuation. I will refer to the fishermen first, they are the less important and the less numerous. The number of fishermen on the coast of Clare is roughly about 300, many of them have other means of livelihood—they are small farmers or labourers, and they also collect seaweed, which they dry and sell or convert into kelp, while their womenfolk save and sell Carrigeen moss. In this connection I would mention what is a great hardship, viz., most of those who collect seaweed have to give a "royalty" of from one-third to one-half to the owners of the strand where the weed is collected. They go out endangering their lives, either on foot or on cars—sometimes the horses are swimming, and I have even seen them up to their armpits dragging it in, and because they are supposed to trespass on somebody's land they have to pay the royalty. When that weed is dried—it used to be that two cocks were made of the dried weed—the owner of the land takes one cock and the man who had all the labour takes the other. Things have improved slightly in regard to that.

40133. Has the legality of that ever been tested?—It is like this. You need not let anybody go into the strand through your land.

40134. If it is enclosed?—It is not enclosed. The owner claims the foreshore up to high-water mark.

40135. If he has a charter for it?—I need not tell you these poor people could not afford to contest the claim. It would cost a good bit of money to find out that charter.

40136. Mr. Kavanagh.—What you describe is the existing custom?—It is, on most of the strand. There are some of them, called "free" strands, where a man is at liberty to go out and take what he can get.

40137. Mr. Sutherland.—What makes them free?—Just what you have said, I think. They were not able to show their charter.

40138. As a general principle the foreshore belongs to the Crown, except where there is a charter saying that the Crown gave it away?—That is the law, but against that there is this, that the landlord has custom for perhaps 200 years. He establishes a right and puts the onus upon you to disprove it.

40139. There is no prescription against the Crown?—I know that.

June 5, 1907.
Rev. P. Glynn.

40140. Mr. KAVANAGH.—It is not a question of foreshore, but bringing the kelp across a person's land?—No, it is a question of the foreshore rather than that. I know the case of a gentleman, in this town, a Mr. Brew. We had a big fight over that business. I was in this parish, and we knocked him down to one-third instead of one-half. We did not trespass in the smallest degree on his land. There was a road going into the foreshore.

40141. Most Rev. Dr. O'DONNELL.—There is drift weed and weed which is cut out at sea. If they could cut it at sea and escape to any other port in their boats they would be all right?—Oh, yes.

40142. They go for the drift weed, and that they cannot take without paying a royalty?—Not without paying a royalty. The primitive curragh, or canoe, is the only fishing boat on the coast of Clare, with the exception of one nobby at Carrigaholt. It is difficult to say how the condition of the Clare fishermen can be improved. A few landing places are required. A small pier at Ballaghaline, for which the Agricultural Department has consented to give a grant and the County Council a grant of a like amount. At the Goleen-Moveen, between Kilkee and Carrigaholt, there is a narrow and dangerous creek, a very treacherous landing place. The Agricultural Department promised a free grant to improve this creek about six years ago, but since then nothing has been done. In connection with that I would wish to say that after I saw a communication that was sent to the County Council, where the Department promised to give a free grant for this particular place, because it was very dangerous, I wrote to the Department thanking them and trying to keep them to their word about it, and I got a reply saying they would carry out that improvement in connection with the other landing places in Clare. Since then they have done absolutely nothing, and they have denied that they ever made any free grant at all, though I have it down in black and white that they did. Besides providing the fishermen with less dangerous landing places, I do not know that much can be done to improve the fishing. I do not believe they would attempt deep sea fishing, even if provided with large boats. Of course, I do not know that of my own knowledge. I was told in Liscannor last year—because I made it my business to inquire—that Sir Francis Brady offered them a deep-sea fishing boat, and they would not go out, but I think if the young fellows were trained they would go out.

40142A. Mr. KAVANAGH.—They are not trained at present?—No. It seems extraordinary that our fishermen never got even a net since the Congested Districts Board was established, while the fishermen of Aran and Galway and all round the coast have been nursed and cuddled.

40143. And your Claremen have not?—No.

40144. Most Rev. Dr. O'DONNELL.—Did they apply for boats?—I applied for a boat for Carrigaholt last year, and did not get it; but four fellows borrowed money themselves and bought one, and I am sorry they have not been very successful. They paid £140 for a nobby and nets.

40145. Mr. SUTHERLAND.—Do they fish from Carrigaholt?—Yes.

40146. Do they go out far?—Yes; these men went down to Fenit, and fished fifty or sixty miles beyond the coast.

40147. What were they fishing for?—Mackerel. One night they had 3,000 mackerel, but they were obliged to sell them at 4*s.* a hundred.

40148. Most Rev. Dr. O'DONNELL.—How long is it since they got their boat?—About fifteen months.

40149. It would be a great thing, I would suggest, to get them to persevere?—I think they will.

40149A. One does not know in the fishing business when a prosperous season sets in?—There is one way they lose in fishing—I am talking of fishing round the Clare coast—and it is the middleman who gains. When they come in they sell the fish for 4*s.* or 8*s.* a hundred. The middleman holds them on and sends them to America, and often sells that very fish at 12*s.* and 13*s.* and 14*s.* a hundred.

40150. Mr. KAVANAGH.—The middleman is the local buyer?—Yes. I think if there were some small curing station established where these people could cure their fish, or if they were helped by some means that would enable them to hold the fish for a rise in the market.

40151. Most Rev. Dr. O'DONNELL.—Would it also occur to you if there was a considerable development in the fishery that you might expect where the take was large that a number of buyers would come and compete for the fish?—Naturally. They used to come to the Clare coast some years ago when there were large takes.

40152. Along the coast of the scheduled area it is not unusual to have keen competition at an auction for the fish?—Sometimes you will have only one man to buy from you, and you must take the money he offers or nothing.

40153. Mr. SUTHERLAND.—You have a railway behind you?—You have, but I think if you put fish into that railway it would be pretty old before it got to the end of it. There would also be delay in transferring the fish from the narrow to the broad gauge. To improve their condition I would suggest that each fisherman be provided with a few acres of land, say four or five, near his dwelling, on which he could keep a cow and sow potatoes and vegetables. Most of them can get suitable houses built under the provisions of the Labourers Act. There is great need of inculcating habits of thrift and economy and sobriety amongst them. Of course if a man has a bad cabin and lives in miserable surroundings it is really very hard to expect thrift from him. If you improve their condition thrift would follow, I think. I take Ballaghaline. There are a lot of wretched cabins there, and they pay £4 an acre to Mr. M'Namara for a little plot of land on which to sow potatoes. Mr. M'Namara has on that very spot adjacent one place of 104 acres, another of 173 acres, and others of 143 acres, 233 acres, 175 acres, and 199 acres. Those poor people have to pay him at the rate of £4 an acre to sow plots of cabbages and potatoes.

40154. It is conacre?—Yes. You take it for a season. You have no claim to it after a season.

40155. They have no plots of land attached to their houses?—No.

40156. Mr. KAVANAGH.—I think Mr. M'Namara expressed his willingness to sell?—Yes.

Mr. O'KELLY.—Mr. M'Namara said if the landlords were properly approached they would be prepared to enlarge their holdings. I do not think he expressed their willingness to sell——

Mr. KAVANAGH.—I gathered he would be inclined to sell part.

Mr. O'KELLY.—Yes, according to the procedure I have indicated.

40158. Most Rev. Dr. O'DONNELL.—You say, Father Glynn, it would be desirable these men should have four or five acres?—I think every poor man of that kind ought to have enough land for a cow to give milk for his children.

40159. You would like to provide for a class that would scarcely be fishermen all the year round?—Yes.

40160. You would like to provide a second class of occupation for them?—Yes.

40161. If they were fishermen all the year round a smaller grant of land would be required?—Yes.

40162. Under the Labourers Acts it would be possible to get an acre for them?—Yes.

40163. And a good house?—Yes.

40164. That could be taken compulsorily?—Yes.

40165. Don't you think that would be a good thing to do, unless the owner was willing?—Certainly. I think every fisherman who works ought to get an acre.

40166. Your idea would be that wherever land is assigned to a family it should be sufficient for milk and vegetables?—Yes.

40167. But short of that it would be a great improvement for these people if they had a nice little dwelling and plot?—Yes.

40168. Does the West Clare Railway really touch at any point a safe harbour of refuge for fishing boats?—There is Lahinch, only two miles from Liscannor.

40169. Mr. KAVANAGH.—You would not call that a safe harbour?—Liscannor is a safe harbour.

40170. I thought you said Lahinch?—Liscannor. It is only two miles distant from Lahinch.

40171. Most Rev. Dr. O'DONNELL.—Going further south, is there any other?—The only other would be Kilrush—in this way that at Kilrush there is traffic with Limerick by boat. You could transfer your fish to the boat and get it sent to Limerick.

40172. Would you think that some harbour of refuge would be required between Kilrush and Liscannor?—There is a harbour, but I do not know

whether it is a safe place for fishing boats. There is a place at Seafield near the railway station at Quilty. There is a pier there, but I do not know that it is safe. It might be made safe at very little expenditure.

40173. Quilty gives evidence of the existence of a sturdy fishing population. Do you not think it would be possible to encourage the people to follow the fish wherever they are?—I do not know that you could do that with the old fellows. These people have spent their lives in canoes, and it would be difficult to get them to go far out to sea. You might do something with the young people. As to the second class, the small farmer class is the class whose condition most loudly calls for amelioration—it is the class which supplies the great majority of emigrants. In Clare fifty-three per cent. of the holdings are under £10 valuation, and in West Clare the percentage of the holdings under £10 valuation cannot be, in my opinion, much less than seventy per cent. of the entire number of agricultural holdings. The occupiers of these small holdings rear their children for the American market, and the earnings of those children supplement the profits of the little holdings and enable the parents to maintain themselves and pay rent, etc. As I have said already, it is quite impossible for people living in many of these miserable holdings to maintain themselves without some means of support. Their really standing means is the American money. If that were stopped I fancy rent would almost automatically cease to be paid. The cruel thing is that, side by side with these miserable uneconomic holdings, or at a distance of twenty or thirty miles of them, there are ranches of hundreds of acres with no human habitation except that of a herd. If the owners of these ranches added to the wealth of the community, or even prospered themselves on the profits of ranching, there may be some semblance of grounds for not at once taking measures to relieve congestion and for not taking steps to stop the hemorrhage that is draining away the life blood of the country. But it is notorious that the grazier gives no employment, that ranches in the neighbourhood of a town or village means ruin and decay for that town or village. Bullocks and sheep don't wear boots and clothes, neither do they eat bread, and it is pretty well known also—the graziers themselves are continually saying so—that grazing does not pay. Yet no sooner does a grazier break down—and the event is of rather common occurrence—than a shopkeeper, a professional man, or a returned American or Australian tries his luck at grazing, and spend upon bullocks and sheep the money they have made in their shops or professions. The obvious duty of the State then is to take up (1) all grazing lands now in the occupation of the owners; (2) the surplus lands—after the occupier himself is left a holding of the estimated value of £200.

40173A. Mr. Sutherland.—You put it rather high?—I put it very high—too high, because I think £100 would be quite sufficient, but I want to be specially generous, so that there could be no objection to what I have said. In Clare this would more than suffice to give sufficient land to raise the holdings of all persons under £10 valuation to £10. The valuation of land in owners' occupation in Clare is £22,000. The valuation above £200 and not exceeding £300 is £15,757. The valuation of holdings above £300 is £30,386. That works out in this way. If you leave each of these holdings of the valuation of £200 there would be land of a valuation of £17,786 available for distribution. So that there would be thus land valued at £40,000 for distribution in Clare which would be sufficient to bring all holdings under £10 up to that standard. That works out at £43,000 worth of land in County Clare, and you would require only lands of the valuation of £40,000 to bring the uneconomic holdings up to the £10 valuation.

40174. Mr. Kavanagh.—Is all the land you have referred to suitable for enlargement—is there no mountain or bog?—I have no doubt that a great deal of it is available. There are a good many crags, but not so much mountain. But, working at the thing as I have done, you would have a margin of £13,000 for waste lands of the kind that may not be suitable, and I certainly believe that there is somewhere in the neighbourhood of £40,000 valuation of land available for migration purposes if the suggestions that I take the liberty of making were carried out.

40175. Most Rev. Dr. O'Donnell.—Even the crags would be useful?—They would.

40176. But not for tillage?—No, but the crags would be more useful for men living in the neighbourhood on uneconomic holdings. You have a man, say, with a valuation of £5 who has a little bit of a farm in the neighbourhood of a crag, and if he got a good slice of crag that he could graze sheep and young cattle on it would make a very comfortable man of him. Another thing I wish to say is this. We start with the fact that there is land to the valuation of £43,000 available for migration purposes in Clare. You would not require anything like the £40,000 worth to raise the holdings to an economic standard. I will show you how. There are numbers of persons who have holdings under £10 valuation who are unsuitable for migration purposes. I would not migrate those who I did not think would be likely to prosper, and in every department you have ne'er-do-wells and people who would not prosper anywhere.

40177. And there are some who would not remove?—Certainly, but even among those who would go there are some whom it would be undesirable to remove. Then, as regards fishermen, they are put down as the holders of uneconomic holdings, and so they are; but I would not migrate them. Of course I would give them a little bit of land with their houses, as I have said, three or four acres. Then there are small shopkeepers, carpenters, and people of that kind, who have small holdings, and I would not migrate those.

40178. Most Rev. Dr. O'Donnell.—They have already a means of living?—They have.

40179. Mr. Sutherland.—Then there would be the addition of the holdings that would be vacated?—Just so. Some people say, "Why make them all one standard"? I would not do that at all. First of all there is quite a large number of people to start with, with holdings of £200 valuation. That is an enormous tract of land to leave to any individual, especially to a Clare farmer, who does not till and gives no employment. I certainly think that no farmer who does not give employment and till a considerable portion of his land, say one-fifth or one-sixth or one-seventh, according to some standard that is laid down, should be allowed to have land valued for more than £100. Of course if a man is a large farmer and gives large employment of labour, he is as useful to the community as any man could be, and he helps the people to live.

40180. Most Rev. Dr. O'Donnell.—You think that the body having charge of the relief of congestion should have large powers and a free hand?—I think it should have absolute powers. If it has not, the process of relieving congestion in bits and scraps will only ruin everything, because the result will be that graziers, when they see what is coming, will stripe the land among their own friends and defeat the object of the law. As regards the difficulty of inducing persons who live on uneconomic holdings to migrate, in my opinion no difficulty exists, except in the cases of old and unenterprising farmers, or in the cases of some few persons who for one reason or another are tolerably comfortable on a farm of less than £10 valuation. Many small occupiers would be, I think, reluctant to migrate to another county, but where, as in the case of Clare, there is plenty of good land for the landless in the county itself, very few of the small occupiers, whom it would be desirable to migrate, would refuse.

40181. Mr. Kavanagh.—Would there be any disinclination to remove from one end to the other?—I don't think there would be.

40182. Would there be any disinclination on the part of those among whom they go to welcome them?—I certainly would improve the conditions of the local people before any outsider, but if that was done I don't believe they would object, or at all events they would not object in a way that could not be got over. I would supply land for the landless in the immediate neighbourhood first. After doing that I would bring in outsiders from the same county, and if I had sufficient land after that, I would bring them in from another county.

40183. Most Rev. Dr. O'Donnell.—At what stage would the sons of tenants in the county have a claim?—After providing for men of £10 and under.

40184. But you would put congests at a distance before the sons of tenants in the vicinity?—I would, certainly, because our first object is to try to relieve congestion. A tenant on a £30 holding who has three sons is not a congest, though he has a son who

June 5, 1907.

Rev. P. Glynn.

would be very glad to get a farm. I would not give them farms until I had provided for the congests first.

40185. Then this is the order in which you would take them: congests in the vicinity first, congests from a distance next, to a reasonable extent, and then, if there is any surplus land left, you would give it to the sons of farmers?—Yes.

40186. Mr. O'Kelly.—In last analysis, would that mean that sons of farmers would be shut out altogether?—Are not they shut out at present by the grazier; and again, the daughters are shut out, whereas the daughters could marry congests who would get the land, and in this way be saved from emigration.

40187. Suppose that we say that the congests would have the first claim on the land so acquired, and that after these then that the sons of tenants should have the second claim, don't you think you would have exhausted all that land before you would have exhausted the congests?—No, I don't think so at all; as I have shown, so far as the County Clare is concerned.

40188. But I presume that after satisfying the claims of local congests, you would give the first claim on the lands left to congests from another county?—No. I did not deal with the other county. I think that the question his lordship asked, would I deal with local congests first; that is, those in the vicinity: I said, yes. Then he asked me would I bring in congests from a distance, and I said, yes. By congests from a distance, I meant those within the county. I certainly do think that if there are desirable sons of farmers in the neighbourhood, I would give them the preference before bringing in congests from another county.

40189. Most Rev. Dr. O'Donnell.—Your view is, that considering the number of congests in Clare, it would be very good of Clare to provide for its own congests?—Yes.

40190. That would be a considerable demand on the available grass land?—Yes.

40190A. After that the sons of Clare tenants would have a look in?—Yes.

40191. Mr. Kavanagh.—Have you ever thought out a scheme of common grazing for these uneconomic holders: suppose there is a large ranch in the middle of a district of uneconomic holdings, what would you say to giving common grazing? You would do away with the expense of moving these people and building new houses and fencing and striping and all that?—I am afraid that it would not be practicable—that it would lead to a great deal of litigation and trouble.

40191A. It is very general in Scotland, I understand, in the Crofter district?—Possibly it would be a good thing. There is a farm which we contemplated buying. We were dealing with the landlord recently, and the sale fell through. It would be forty acres of good land that would be a great accommodation to small people around the place. I was considering, if we bought it, what would be the best thing to do with it; should we have common grazing, as you suggest, or stripe it into small holdings; if you stripe it into small holdings a great deal of it would be eaten up by the fences. I would approve of what you suggest if I had sufficient confidence that the people would keep from litigation and quarrelling. But those small people are very tenacious of their imaginary or real rights, and if law got up once, I am afraid that the improvement of their holdings would not pay the expenses of law.

40192. In sheep-grazing rights, do you find that there is litigation?—I do not. There is in one part of my parish a place that we bought some time ago, and there is never any trouble there. There is a very large commonage of 1,500 acres. Those people who have rights not only graze there, but allow their neighbours to graze it and don't make any noise over it.

40193. I have experience, too, of grazing rights, and I find no litigation resulting, and I cannot see why there should be litigation over common grazing rights on those ranches?—Once you settle what the rights are, I fancy there would not be.

Mr. Kavanagh.—The rights would be so much a head for the cattle.

40194. Most Rev. Dr. O'Donnell.—I take it you speak of people whose past history on confined areas has involved them in that litigious disposition to some extent?—Yes.

40195. Living in a close neighbourhood, on small holdings?—Yes. A trespass means a good deal to some of them.

40196. Mr. Sutherland.—But the ancient custom in Ireland was common management of the land?—I am aware of that, but it is so long ago that I am afraid they have forgotten the traditions.

40197. They have been fed upon political economy and individualism?—Yes. Another means by which the condition of the occupiers of small holdings—and for that matter of the occupiers of large holdings as well—could be greatly improved is, agricultural education. Clare is, I regret to say, very backward in agricultural education—West Clare especially. The few resident landlords farm such lands as are in their own possession just as badly as their tenants. The Agricultural Department has done practically nothing for agriculture in West Clare. Whether that is the fault of the County Committee or the fault of the Department, I am not prepared to say. I believe both are to blame. For the past six years some £2,000 a year has been expended on what the Department and the local Committee are pleased to call Agricultural and Technical Education, while the value received by Clare bears a very small proportion to the expenditure. A good portion of this money has been spent on bulls and stallions, good enough purposes in themselves, although West Clare has benefited very little by them; but what Clare East and West sorely requires is education in modern methods of agriculture, and little or nothing has been done in that direction. With improved agricultural methods, I venture to say the land could be got to produce twice as much as it produces at present. The land is saturated with moisture, and there is very little done in the way of drainage. Drainage, arterial and field, is greatly needed. The tillage in the county is small and badly done. After six years under the Department of Agriculture, not one-fifth of the potatoes were sprayed last year. There is just one way by which Clare farmers can be taught, and that is by object lessons. If a few well-managed and well-tilled small farms and the profitable results of them, were in each parish, I believe the results would be beneficial. Demonstration plots scattered through the county and in the neighbourhood of every church in the county where the people could see them, would be a great advantage. Above all, the children at school should be taught practical agriculture, and with a view to that object, there should be attached to every rural school one acre of land at least, for the purpose of a school garden, and which should be cultivated according to the best and most up-to-date methods. In every rural school there should be at least one teacher, a skilled agriculturist, holding a diploma for the teaching of agriculture. This he could get by attending an agricultural college for six months, either at the period of training or afterwards. The great and, indeed, the only industry of the people of Ireland is agriculture, and it seems ridiculous to be teaching children in rural schools during their entire course, everything except agriculture.

40197A. Most Rev. Dr. O'Donnell.—You begin with the beginning?—Yes.

40198. You consider that if the sons of farmers got a little practical training in agriculture they would be more inclined to till the land afterwards?—Of course. They would know how to till it, and know the advantages of tilling it.

40199. You think that if in the peninsula stretching out to Loop Head, demonstration plots or farms were established on a practical basis so as to show the people what could be done in the proper rotation of crops, the results would be good?—I think that the results would be very beneficial.

40200. Mr. Sutherland.—You want these attached to the school?—Yes.

40201. You want to bring the education to the people who would benefit by it?—Yes. In our National schools they are taught everything, clerking and all sorts of things, everything to wean them from the land, though the land is what they are to live by afterwards. There was nominally agriculture in the schools, but the schoolmaster himself could not tell you a thistle from a dock-leaf. He read the thing out of books, and his own garden was the worst in the parish.

0202. It seems rather anomalous that there is so h effort put forth to teach what is called agricul-, and that agriculture is exactly the thing we t see in Ireland?—No. We have read a lot of eches about agriculture in Ireland, but as far as ctical work is concerned, there has been nothing. was all round West Clare last summer. I went d with the view of getting evidence and seeing w things were. I did not see from Lisdoonvarna d by Ballaghaline, Moher, Lahinch, Miltown-ay, and on until I came home, a garden of atoes sprayed; and you are told that really this partment of Agriculture has changed the face of land in Ireland.

40203. I dare say you would not in any country in ope travel so much good land and see so little riculture?—Unless to have a cow in a field.

40204. I don't call that agriculture?—Nobody does, course.

40205. Most Rev. Dr. O'Donnell.—From that sug-tion of yours to which you have given much con-eration, it would appear a necessary conclusion to ve an agricultural side to the training college for chers?—Certainly, because if you send in a teacher l tell him to teach agriculture, he will get it out books, and when an inspector comes who knows little about agriculture as he does himself he will swer what is down, and tell him about the rotation crops and that turnips ought to follow oats, and so ; but if you bring him out and ask him how is the rnip to be tilled, and how are the oats to be tilled, has no more idea of it than he has of the transit Venus.

40206. Mr. Sutherland.—The thing is to have an perimental garden attached to the school?—Yes.

40207. You want to see more reality imparted into e teaching of agriculture?—Certainly.

40208. Mr. Kavanagh.—Is there any spraying going this year?—Last year taught them a lesson. I ink that there will be a good deal of spraying this ar. The price of the stuff has gone up a great deal. me years ago it was 22 shillings. This year it will 33 shillings.

40209. They have no horse machines for spraying? No. I wish they had hand ones, and used them.

40210. Most Rev. Dr. O'Donnell.—Did any scheme cur to you by which a county could encourage and rtly compel the people to spray?—Personally, I ve been preaching spraying for thirteen or fourteen ars and have succeeded wherever I have been sta-oned. That is one way of working. If the priests ork it up I think that they could get their arishioners to spray I certainly think that our Agri-ltural Committee—and I recommended it to some f them, and don't know why they did not take it up—ould give a bonus for spraying, say, in the shape of pplying the stuff for spraying at half-price to small oldings under £10 They did not do this. They refer to have shorthorns, or something of that kind.

40210a. Don't you think that your suggestion would e a very practicable expenditure?—Of course it ould, but I don't think that the Department would llow that. As Sir Horace Plunkett once said to me, hat would be encouraging a man to do what he ought o do himself.

40211. Would not you consider it educational to ive the spraying mixture at a reduced price until ll the people got into the habit of spraying regu-arly?—Yes.

40212. Mr. O'Kelly.—I thought that the Depart-ment came into existence for the purpose of en-uraging and stimulating agriculture?—So it was. It has had a rather good trial, and except where griculture was at a pretty good stage of progress be-ore it was established I don't think it has improved much since.

40213. It has gone on now for from six to seven years?—Yes.

40214. I venture to say that the views you have formed are shared by nine-tenths of those who have inquired into its working?—I think that anybody who inquires with an open mind, at all events, must come to that conclusion. People who have jobs on the De-partment staff naturally don't come with an open mind.

40215. Mr. Kavanagh.—At the same time I don't see how you can encourage agriculture where there is no tillage?—In one way you can. You can show a man what may be done. If you say to him, "You are exhausting that land by your present system of grazing cattle; you have old grass there for forty years, and it has got full of weeds; turn it up; to be sure a crop of oats won't pay you, but when you sow a crop of turnips and manure it well, and then let it out with grass seeding, you will make fine land of that," he won't agree; but if they had small farms in his neighbourhood where he could see this system carried out and see its advantages, I have no doubt that before two years they would adopt the system.

40216. If they had labour; but suppose they had not the labour?—He has his own sons very often out working at something else, when it would be more profitable to have them attending to the farm. Suppose he has no labour there is a great difficulty. You can have labour if you can pay for it, but the labour is going away steadily. That is another strong reason for doing what I want to do, that in a short time—already we have nearly come to that—if emigration goes on as it is going there will be no labour left in the country.

40217. You are strongly in favour of experimental plots?—Certainly, and I think that if we could get experimental small farms it would be even better than that

40218. Most Rev. Dr. O'Donnell.—Farms of the ordinary size that the people hold?—Yes.

40219. Then you would have it tilled in the best way for that locality?—Yes.

40220. You think that the successful tilling of such a farm would induce neighbouring holders to follow suit?—I have no doubt about it.

40221. If they did that young men would have a great deal of occupation for their own lands?—I have had experience of that. I was down in King's County and part of Tipperary as a curate. Wherever you had in that neighbourhood a landlord who tilled his land, as most of them did till them—having stewards and giving employment—all the small farmers around there were quite as good farmers as the landlord's steward. What taught these farmers was the object lesson before their doors. We have never had anything of the kind here. Want of capital is in a great many instances the cause why many farms in Clare are not worked to great advantage. To provide capital I think the State could with advantage lend to occupiers who have purchased their holdings sums of money up to one-third of the amount of the advance made to purchase the holding—the loan to be at 3¼ per cent. for 68½ years. A man purchases his holding at say, £300. He borrows for drainage purposes £75. The interest upon £75 will add little to his instalments of interest, while £75 judiciously expended on many a small holding would make it twice as valuable as it was before such expenditure. This would make the payment of his instalments of purchase more easy and the danger of failure less. I think certainly that in West Clare it would work very well. The farmer himself would earn all that money in improving his own holding.

40222. Mr. Sutherland.—I could understand a scheme of advancing money for drainage?—This is for improvement in general.

40223. Including drainage. If the farmer had no other burden that would be all right; but do you mean to impose this further burden of a loan upon him after he has purchased?—Yes, because I don't consider it a burden. I consider it a means of relieving the burden already upon him.

40224. After a time?—The first day—you take a farm, as I have said, bought at £300, that requires improvement, and is notoriously in a rather derelict condition.

40225. What annuity would he be paying?—On £300 his annuity would be £9 15s. You add fifty shillings to that.

40226. Would that be sufficient?—That would give him the £75.

40227. How would he expend it?—He has been for a great number of years paying at least £12 or £13 rent. He buys, say, at 21½ years' purchase, and gets a reduction of six shillings in the pound on his rent or about seventy-eight shillings a year. Deduct that from £13, and the rent he would have to pay is only £9 2s., as compared with £13, in fact £14, which the man's rent used to be.

40227a. He is actually paying now in rent more than he would pay after getting all these improvements in future?—Yes.

June 5, 1907.
Rev. P. Glynn.

40228. Mr. KAVANAGH.—The £2 10*s.* a year would be added to repay the £75 borrowed for and spent on the improvement of the land.

40229. Most Rev. Dr. O'DONNELL.—You would have this advantage; as the drainage told on the land you would relieve the pressure at a time when future contingencies might make it very difficult for him to repay his instalments?—Certainly. You improve him in every way. You give him money to earn—the very thing we want in Ireland. You give him £75 that himself and his family can earn and apply to the improvement of his holding. In addition he improves his holding, and makes it certainly once and a half as valuable as it was before that, and he still pays less rent than he paid before purchase.

40230. Do you suggest any plan to secure the expenditure of the £75?—Yes. I would be very careful about the expenditure. There should be an Inspector belonging, I suppose, to the Estates Commissioners or the Board of Works, a man who would take care not to give out a penny until it was earned.

40231. Mr. KAVANAGH.—What could he borrow at now?—I suppose that the State would lend at the same rate as it does to the borrowing purchaser. At present he could borrow at £6 10*s.* per cent. for twenty-two years. Borrowing at that rate is rather prohibitive, because you increase the rent too much right off.

40232. Most Rev. Dr. O'DONNELL.—You consider that it would be good State policy to advance money at a cheap rate of interest to enable a man to purchase his holding, and that it is better policy still to advance money that you may hand over that holding to him in good workable condition?—Yes.

40233. Mr. SUTHERLAND.—What strikes one is the difference in the two transactions. You purchase a holding and improve it and your annuity is less than the rent that you pay at present?—Yes.

40234. How do you reconcile that?—I don't reconcile it. It is a fact.

40235. Is not it a remarkable thing that a farm without any improvements except what are made by the tenant pays £13 at present, and that after it is purchased and improved he can get it for £12?—Yes.

40236. What is the inevitable deduction from that?—I don't know.

40237. The enormous rent that he is paying?—Yes.

40238. That a tenancy unimproved is of more value than a tenancy improved?—Yes; but the old system of paying these high rents is one of the factors, I need not tell you, in producing the existing condition of the country.

Mr. SUTHERLAND.—I think it is; but there could not be a more striking illustration than you have given.

40239. Mr. KAVANAGH.—I don't think that it is evidence of very high rents at all, but rather that the State is lending money at a cheap rate of interest?—Owing to the system of purchase within zones, I regret to say that in the poorer districts the prices paid are excessive. Fairly good land favourably situated in proximity to markets may be worth twenty-five and twenty-seven and a-half years' purchase when inferior land in backward districts is not worth ten years' purchase. Bad land is dear at any price, and the security to the State is precarious. Tenants on bad and inferior land, nevertheless, are anxious to buy at almost any price: first, to get rid of the millstone of arrears, and thus, as they say themselves, "cut the gad next the throat," and, secondly, because of the few shillings in the £ reduction. In nineteen-twentieths of the cases of purchase of inferior land no competent inspector would say the holdings were security for the instalments. I also consider it a great misfortune that by the purchase of small holdings congestion is being stereotyped. One of the strongest reasons put forward by Mr. Wyndham for the necessity of the Land Act of 1903, and it was the reason that appealed most strongly to Parliament, was—in order to bring relief to "the rotten and rigid communities" in the West of Ireland. Surely reducing the rent of a tenant who has been paying £5 a year to £3 10*s.* will not bring him much relief, neither will it enable him to keep one less of his seven or eight children from the emigrant ship. As far as Clare is concerned, the Land Act has not given even the small relief above referred to, for it has been practically a dead letter in the county owing to the high prices demanded by landlords for their estates. During the period from the 1st November, 1903, up to the 31st March, 1906, the amount of money applied for in Clare was only £410,554, and the average purchase price exclusive of bonus was 20·9 years, while under the Ashbourne and Balfour Acts the average purchase price was 15·9. And this high purchase price is very often given for miserable uneconomic holdings; indeed average holdings purchased in Clare under the Act of 1903 can scarcely be said to be economic. From the Report of the Estates Commissioners I learn that the second-term tenants in Clare purchased their holdings at 22·9 years' purchase, exclusive of the bonus, and the average rent of these tenants was only £10 8*s.*, while the average rent of the non-judicial Clare tenant purchasers was only £10 18*s.*, and the purchase price 21·8 years without the bonus. The conclusion to be deduced from these figures is obvious. I think it is a block in the way of emigration as stereotyping congestion.

40240. Most Rev. Dr. O'DONNELL.—You consider that no good purpose is served by selling to a number of small occupiers without some attempt being made to enlarge the holdings?—Yes.

40240A. You think where the land is occupied to this great extent by small occupiers public policy demands that before the holdings are sold to the occupiers on an estate an effort should be made to provide an enlargement?—They should be made economic where you see a man who cannot rear his family on what he has got.

40241. That is one of your points, and the other is this: that the sale of bad land is a very different thing from the sale of good land?—Yes.

40242. And a large number of years' purchase on the sale of bad land is a dangerous thing?—In two ways the thing is quite ridiculous. You have a number of tenants who have bad land, and if the authority sent round to investigate the circumstances of their holdings declares that their holdings are not security to the State for an annuity, then, surely, they are not security to the landlord for rent. Beside these men is a body of men on good land whose rents are paid as regularly as the interest on Consols. The landlord makes no distinction in the purchase price between the man for whom he has good security and the man for whom he has no security. I think that is ridiculous.

40243. Mr. SUTHERLAND.—What is the position of the large grazier? Can he purchase also?—No. If he has only an eleven months' letting he is not a tenant and cannot purchase, but a grazier who is a twelve months' tenant or a judicial tenant can purchase. The policy of the State was that money to a greater extent than £3,000 could not be advanced to these people. That was increased to £5,000, and unfortunately, under the Wyndham Act, it got further increased to £7,000, so if he can show reasons to the Estates Commissioners for having an advance made up to £7,000 he can perpetuate grazing.

40244. Mr. O'KELLY.—The increase to £7,000 was to cover the case of tenants who had been evicted under the plan of campaign and others?—I think it is a pity that that was not put down in black and white.

40245. Mr. SUTHERLAND.—So they are stereotyping it in both ways?—Yes, stereotyping poverty, congestion, and grazing.

40246. Most Rev. Dr. O'DONNELL.—Don't you think that it is very much against good policy that public money should be advanced to enable a man who merely grazes his land to receive advances up to £7,000?—I think that it is outrageous.

40247. Mr. O'KELLY.—Suppose that the Congested Districts Board bought a property on which such a tenancy exicted, would not it be within the power of the Congested Districts Board to determine such tenancy?—That is the suggestion I make. I would allow no man, whether a tenant or a landlord, to have more than a certain quantity of land—say £200 valuation.

40248. They can determine the tenancy?—I did not know that.

40249. £200 is rather high?—Too high, except in the case of a farmer who gave a great deal of employment for labour. If a man has a very large holding and gives constant employment to six or seven labourers he is quite as useful a member of the community as anybody. In illustration of what I have been saying about congestion I submit a case, however, which has come under my own notice, and which will give the Commission some idea of the miserable character of many of the holdings that are being purchased. A Clare landlord who held an estate in the neighbourhood of Kilkee offered to sell it to the tenants in the

1896 or 1897 for sixteen years' purchase. No sooner was the Act of 1903 passed than the tenants agreed to buy from him at twenty-three years' purchase. They afterwards backed out of their offer, and he sold the estate to the Estate Commissioners, and he got a price which worked out at, I believe, twenty-two or more years' purchase. On that estate the valuation per head of the population of four of the townlands sold is only £1 4*s.* 4*d.*, and in these four townlands there are about sixty families. Surely, this is stereotyping congestion. In one of these townlands the population has fallen thirty-five per cent. in the ten years from 1891 to 1901, and the Census Blue Book informs us that the decrease is due to emigration.

40249A. Most Rev. Dr. O'Donnell.—Are there grass lands near that might be used?—No; unfortunately in West Clare there is very little grass land. Near Quilty there are 300 or 400 acres, and there is quite a large number of poor people on small holdings in the neighbourhood. There are some rather inconsiderable grass lands in the peninsula, but there are very few grazing tracts in West Clare. In North Clare it is all grazing. What we complain of most is that the Estates Commissioners in this case were the medium of the bargains. It was sold to them, and they re-sold to the tenants.

40250. Did they re-sell to the tenants without making any attempt to enlarge the holdings?—I don't know that it was possible to enlarge them because there were no lands in the neighbourhood.

40251. Would it have been possible to buy lands at a distance and migrate some of the tenants?—Certainly, I don't think they should agree to a sale of that kind.

40252. Mr. Kavanagh.—The Inspector saw it?—Yes.

40252A. And declared it value for the money?—I presume so. Seeing that the valuation per head worked out at £1 4*s.* 4*d.*, and seeing that in one of the townlands 35 per cent. of the people emigrated in ten years, I don't think it was value for very much.

40253. Mr. Sutherland.—You think this was a case in which a public body like the Congested Districts Board might deal with the estate before it was sold?—I think so.

40254. Most Rev. Dr. O'Donnell.—Would this be your idea? The public body in charge of relieving congestion should buy that land from the owner. That same body at the same time should, if necessary, purchase grass land at a distance, and work the two things together?—Yes; transfer some of the uneconomic people to these grass lands, and then divide the holdings among these others.

40255. But you consider that the vesting order should not be made out until an attempt was made at all events to secure holdings at a distance?—Yes; and in addition I think that it was the duty of the Congested Districts Board, the Estates Commissioners, or some body to improve the land that they were giving to these people, which is in a most derelict condition.

40256. Mr. Sutherland.—Have you nothing to say about the land that was offered in 1897 for 16 years' purchase, and was afterwards sold for 23 years'?—Simply that the very statement of the fact shows how land is going in Ireland.

40257. That is to say that the motion of the price of land is upwards?—Automatically this happened on the passing of the Act of 1903. You cannot buy under that Act except you buy within the zones. Automatically the price of land went up.

40258. Why?—Because you cannot buy it under a certain price. The landlord says, "I cannot sell, because the remainder man will have a case against me. Here is the State saying: Instead of 18½ years' purchase of first and 23 of second term rents you must give from 21½ to 27½. I won't go as high as 27½, I will sell for 22."

40259. We have heard continually that the value of the land has gone down since 1881?—Yes; it has. Are not they getting deductions every day?

40260. Rent moves down and the price of land moves up?—A rather funny argument is that a man ought to give more for a second term than for a first term tenancy. The landlord would argue in this way, that the second term tenant has been into court and got a reduction of 5 shillings in the pound, but the reply to that is that the reduction was given because the land was not worth any more, and times have gone down.

40261. Most Rev. Dr. O'Donnell.—You consider that the number of years' purchase should follow the current rent?—Certainly; but I have shown it has gone up in the County Clare 5 years' purchase, or if you add the bonus, by 8 years' purchase, and if you add the advantage in the payment of legal expenses equal to a years' purchase, the addition to the price would be 9 years' purchase. No wonder the people should emigrate, seeing that they had nothing to live upon at home. Whether the petty reduction of 5*s.* in the pound which they have received on purchase is likely to enable the remnant that remains to prosper is, I think, disputable. The same landlord has an estate in the parish of Carrigaholt, for the purchase of which there were negotiations in 1904. The landlord had at the time a considerable acreage of "cut-away bog" upon his hands, and he agreed at the time to give this bog for the purpose of having it divided with a view to make some of the holdings on the estate less uneconomic. The sale fell through, and the "cut-away bog" has been since then disposed of to tenants upon other estates—in punishment as the tenants allege, for the tenants not having agreed to the landlord's terms of purchase. On this estate there are about twenty or more tenants whose holdings are entirely valueless, consisting of a cabin and a few acres of "cut-away bog," for which they pay about £2 a year. The occupiers live by the sale of turf, and on money sent by relatives from America. The turbary bog which supplies them with turf is the only bog within a radius of six or seven miles and supplies turf to the people within this radius. It is almost exhausted and can last only a couple of years at the furthest. When the turbary has been cut away, the security for the instalments of those poor people shall have gone, and, yet, if these men had agreed to the landlord's terms and had purchased at 23 years' purchase in 1904, the sale would have automatically gone through. If emigration is to be put an end to, the sales of uneconomic holdings should at once cease, these holdings should be added to other holdings in the neighbourhood, and the occupiers of these uneconomic holdings should be transferred to holdings provided for them in other parts of the country, and to lands now in the occupation of graziers.

40261A. Are you aware that one of the objects, perhaps the leading object of investing the Estates Commissioners with the powers of the Congested Districts Board in regard to congested estates, was to enable them to do this class of work which you describe outside of the scheduled areas in such counties as Clare?—I am aware of that, but I was aware that they did not do it.

40262. Mr. Kavanagh.—You wish to have the whole of Clare scheduled as congested?—I did not say the whole of Clare. I said any electoral division in which the per head valuation of 50 per cent. of the population is under thirty shillings.

40263. That applies to nearly all the Union of Kilrush?—Yes, practically, and Ennistymon.

40264. You think that the fact of these districts being scheduled would tend to stop emigration?—Not the fact of scheduling them. I do not look on that as any advantage except this, that whenever a district is scheduled in any county where there are scheduled districts, it should be in the power of some authority to take up compulsorily all land that is needed for the relief of congestion, and then by transferring those people in the congested electoral divisions to these lands now in the hands of graziers it would tend to stay emigration, because it would give them the means of living at home.

40265. Do you find that emigration takes place less from the large holdings than from the small holdings?—Certainly, because some of the people can provide for their children at home, give them a fortune sometimes, or start them on other farms.

40266. That is your experience?—Certainly.

40267. Most Rev. Dr. O'Donnell.—About that definition of yours a question has arisen. You consider that no area ought to be scheduled where half the population are under thirty shillings valuation?—Per head of the population.

40268. Would you limit that in this way; would you consider that they should be not only under thirty shillings valuation, but that they should be under thirty shillings valuation as considered

June 5, 1907.

Rev. P. Glynn.

attached to the holdings on which they live? The point is this: if you don't put in a limitation of this kind, you might pick out the people from different families, and say, "Such a one has no valuation at all"?—No, because I take an electoral division, and I find that in that electoral division fifty per cent. of the population are under a valuation of 30*s.* per head.

40269. You take them as they are found on definite holdings?—Yes, of course.

40270. That is the sense in which you understand it?—Yes.

Mr. JOHN MURRAY examined.

Mr. John Murray.

40271. You reside at Kilkee and represent the County Council of Clare?—Yes.

40272. Kindly refer to any points that you wish to bring before the Commission?—The first matter that I had intended to deal with was the high prices demanded by landlords. Father Glynn has dealt fully with that.

40273. The next point, I understand, is the high rates charged for fish by the railway companies and the want of accommodation for landing fish on the coast of Clare?—I know that from Kilkee the rates for cured fish to Liverpool are 17*s.* 6*d.* a ton, while from Clifden or Dingle the rates are only 14*s.*

40274. Mr. SUTHERLAND.—What would be the value of that ton of fish when sold?—It varies. It goes up as high as £12 or £14.

40275. That does not appear a very high proportion for the carriage?—It very seldom touches £14. It is generally about £12.

40276. But you may have cases like this of fish being consigned to market to sell, and then a demand from the railway company for carriage that cost more than the price realised by the fish?—Certainly; it occurred to myself.

40277. It is quite common in Scotland?—It is quite common with us. I have sent fish to England or Dublin, and instead of getting something for the fish I was billed for the freight.

40278. That is of course when the quantity sent is small?—It generally occurs when the quantity of fish is large and the market is glutted, so that prices go down.

40279. Mr. KAVANAGH.—What would be your remedy for that?—If the rates were reduced for fish coming to the market it would help. The rates are very high, about three shillings a hundred for fresh fish, from Kilkee to Dublin. If that were reduced to 1*s.* 6*d.* it would help very much.

40280. Mr. SUTHERLAND.—Are there special cheap rates for fish in Ireland?—I don't think there are, as far as I am aware.

40281. How are they regulated—are they divided into zones, and if you have five or six towns inside a certain circle, do they all pay the same inside that circle?—Yes; that is how it is.

40282. You would like to see that rate reduced?—Yes.

40283. It would help the fishermen?—Yes, very much. When I buy the fish from the fishermen I have to try to meet all these expenses, to buy the fish cheap, so that it recoils on the fishermen.

40284. You heard what Father Glynn said about the profit going ultimately to the man who buys?—I was not in at the time.

Mr. KAVANAGH.—He said that most of the profit went to the middleman.

40285. Mr. SUTHERLAND.—Do you agree with that?—Sometimes; not always. The middleman sometimes loses heavily, but taking it generally, as a rule, he has his profit.

40286. May I ask if you do anything in the fishing?—Yes.

40287. As a fisherman or a middleman?—As a middleman. For the last three months we could not buy any fish at all. We could not touch it, to send to market or otherwise.

40288. Where do you get the mackerel principally along the coast of Clare?—From Miltown-Malbay to Clare Head.

40289. Mr. KAVANAGH.—Is there a baronial guarantee on that railway?—Yes.

40290. How much in the pound on the valuation does it amount to?—It varies. It goes up and down. It is 8*d.* this half year—it will be 4*d.* the next.

40291. Mr. SUTHERLAND.—It depends on the loss on the working?—Yes.

40292. It would be the interest of the railway company itself to give facilities for carrying fish?—Yes.

40293. They would get more fish to carry?—Twice as much.

40294. The amount earned would be more, and consequently the guarantee would be less?—That is a fact.

40295. Have you ever made representations to the railway company to that effect?—Yes; I have often spoken to the manager about it, and he says that they cannot reduce it.

40296. Is not it a fact that it is a favoured railway—that there was a grant of public money to make it, and a guarantee of public money to pay it dividends: In virtue of getting that should they not carry the fish more favourably?—I think so.

40297. What have you got to say about the piers that are required?—We have no piers at all in the County Clare to land fish in with sailing boats. There is a place caled Farragh within two miles of Kilkee, and if there was £40 expended on that place they could fish twice as often as they do.

40298. Mr. SUTHERLAND.—What would it be for?—If there was a shelter for closing up a gap between two rocks it would keep the sea away.

40299. It is not the difficulty of living outside when the boats go out, but the difficulty of getting in and out?—That is the whole difficulty. Further back towards Loop Head the same difficulty exists. In Kilkee if there were a pier that a sailing boat might come into and deliver fish it would be a great facility.

40300. Where would it require to be—it is very shallow there?—No; it is very deep around Kilkee in the bay of Kilkee. There could be a pier built there. There is a breakwater already there.

40301. Where is the landing place already?—It is at the place I refer to.

40302. I saw fresh mackerel being carried around Kilkee this morning—when would that have been caught?—Last night.

40303. How much would they have as a rule?—Some mornings they might have about 1,000 or so.

40304. Is it in the currachs they go out?—Yes. There is not a sailing boat. The sailing boat could not be there without a pier. If there was a pier there it would be all right. I had a fishing boat there, and I had to sell her, because there was no place to put her or land the fish.. There is a pier at Carrigaholt.

40305. How many nets do they carry in these currachs?—Three or four nets—each net about sixty yards.

40306. What at the very best times of the year would they get for a night's catch?—I would put it down at £1 on an average.

40307. Which is the better fishery—spring or autumn?—Autumn is the better.

40308. How long does the autumn mackerel fishing last?—It lasts from September to Christmas, but from last September up to Christmas, I suppose, they did not get six nights' fishing. They might go out and get no fish, or else the weather was very bad and they could not go out at all.

40309. Most Rev. Dr. O'DONNELL.—It was a stormy season?—Yes. They could not get the fish. The fish were not there at all. It was after Christmas that they got the principal fishing.

40310. Did you say to Mr. Sutherland how many piers there are on the coast of Clare at which an open boat or a decked boat would be safe?—I don't think there is one.

40311. Mr. SUTHERLAND.—Liscannor?—A boat may come in in the day time, but it could not come in at night. The pier at Carrigaholt is inland up the river, and when a boat comes up to discharge her fish she cannot go out to fish until the following night.

40312. Most Rev. Dr. O'DONNELL.—You know the coast of Clare yourself?—Thoroughly well.

40313. You know the classes of boats called the nobby and the zulu boat?—Yes.

40314. Where on the coast of Clare would a nobby or a zulu boat be safe during the winter?—Nowhere, except in Kilrush here, and at the pier at Carrigaholt and at Ballyvaughan.

40315. On a stormy day during summer where might you land on the coast of Clare?—Carrigaholt would be the safest. Liscannor is not so safe, but Carrigaholt is so far up the river and so far from the railway that you cannot fish from it regularly every night. Kilkee is just beside the railway, and if you had a pier there at which a boat could be sheltered safely while the fish could be landed it would be very useful, and, in addition, you are immediately on the fishing ground the moment you go outside the pier, whereas from Fenit and Carrigaholt you cannot fish more than three nights a week. From Kilkee you could fish every night regularly if there was a pier built, which would help the fishermen very much.

40316. It is the currach or canoe they use there now?—Yes. These are the only boats that are safe there or could live there.

40317. It would take a very considerable expenditure to make a safe fishing harbour there?—A harbour could hardly be built there, but a pier could be built where the people could run in and deliver their fish.

40318. Mr. KAVANAGH.—If we could have anybody to show us this evening, Mr. Sutherland, and I will go down and inspect the site at Kilkee?—I will be there any time after six o'clock.

40319. Have you anything to say as regards drainage and the reclamation of waste bog lands?—There are some bog districts where poor people are living on very small poor holdings, and if these places were drained, and roads were made into the bogs, and the holdings were enlarged, it would be an enormous advantage.

40320. Would drainage be a difficult matter in the County Clare?—Quite easy.

40321. Is there a good fall?—Splendid fall; either to the Atlantic or to the Shannon side. It would be very easy to drain West Clare everywhere.

Mr. MICHAEL MESCAL examined.

40322. Mr. KAVANAGH.—You represent the Kilrush Rural District?—Yes.

40323. Kindly bring before us any statement that you wish to make?—I have been appointed by the Kilrush Rural District Council, at their meeting, held on 11th May, 1907, to give evidence before the Royal Commission on Congestion at their Sitting to be held at Kilrush on Wednesday, the 5th June. I have been a member of the Kilrush Board of Guardians since 1886, Chairman of the Board from 1890 to 1900, and Chairman of the Rural District Council for a period of six years. I am Chairman at present. The rural portion of the union comprises twenty-seven electoral divisions, divided into four dispensary districts. The area of the union is 136,170 acres; the population is 24,555, and the valuation is £48,589. The indebtedness of the union is as follows:—Balances due to the 31st March, 1907. Kilkee, £819 3*s.* 4*d.*, at 3½ per cent. for thirty years; Cross, £37 19*s.*, at 1 per cent., for thirty years; Mullogh, £34 2*s.* 8*d.*, at 3½ per cent., for thirty years; Carrigaholt, £58 2*s.* 4*d.*, at 3½ per cent., for thirty years; Coovaclare, £30, at 3¾ per cent., for thirty years—Total, £979 7*s.* 4*d.* Shanakyle Burial Ground, £168 10*s.*, at 4 per cent., for fifty years; Farrihy Burial Ground, £23 15*s.*, at 4 per cent., for thirty years; Labourers' Act, 1903, £2,844 15*s.*, at 3¾ per cent., for fifty years.—Gross total, £4,016, 7*s.* 4*d.* Proposed Kilkee Waterworks loan, £4,000, at 3½ per cent. Probable cost of New Labourers' Scheme, £29,000, at 3½ per cent. Total amount for outdoor relief, ending 31st March, 1907—£1,020. In addition there is a guarantee of 2 per cent., on £55,000 on the barony of Moyarta, on a valuation of £27,158, together with a county-at-large charge of twopence on the £1 for West and South Clare Railways, involving a tax from seven pence to fourteen pence per annum. There is a further charge on two parishes, and portion of the third, namely Killimer, Kilmihill, and part of Kilmurry M'Mahon, within this union, on a guarantee of £5,000, together with a county-at-large charge, thereby involving a tax of from four pence to seven pence in the £ on a valuation of £11,607. The portion of the barony of Ibrickane, within the union, is liable for a county-at-large contribution of two pence on the £ for West and South Clare Railways, and for deficiency in guarantee and working expenses in West Clare Railway. The barony of Moyarta, and other contributory areas liable for all deficiency in working expenses, on the South Clare Railway. The area of chargeability for the Kilkee Waterworks loan is the dispensary district on a valuation of £11,670 15*s* There are 223 holdings in the union under 1 statute acre; 475 above, and not exceeding 5 acres; 865 above 5, and not exceeding 15 acres; 5,671 acres of barren mountain land; 1,104 acres of marsh land; 7,437 acres of turf; 505 acres of woods; 12 acres of fallow land; 81,855 acres of grass; 32,138 acres of tillage; 8,775 acres under water, roads, and fences. From the number of small uneconomic holdings in the Kilrush Union, and comparing same with similar holdings in any of the unions in the counties already scheduled under the Congested Districts Board, I am of opinion the Kilrush Union has a strong claim to be scheduled under the Board, with a view of these poor people deriving the benefits conferred on people similarly in the counties already scheduled. The area of the union extends along the coast of the Atlantic Ocean for a distance of about thirty miles. The poor people on the coast live principally by fishing, and burning kelp, and drawing sea-weed, and selling it in winter and spring time to the farmers. They have no land attached to their houses, but have to go sometimes miles into the country districts to till what is commonly known as con-acre lettings from year to year. I refer to the electoral divisions of Kilmurry and Clounadrum, abutting on the sea. There is a grass farm in the latter division, owned by the representatives of H. M'Mahon Creagh, in the townland of Kilclahanne, containing 383 acres 2roods 32 perches; valuation, £205 10*s.* This holding has been let under the eleven months' system for grazing purposes. Had the union been scheduled under the Congested Districts Board, the Board could acquire possession by compulsory purchase, of this large holding, and migrate the poor people from the sea coast into this holding, when parcelled out in lots, to suit the requirements of the individuals and thereby relieve congestion to a great extent. Otherwise I would recommend to the Commission that compulsory powers be given to the Estates Commissioners to acquire possession of this holding and have it parcelled out amongst the poor people in the immediate locality, who have no land. I would recommend to the Commission the advisability of assisting the poor fishermen along the coast of the Kilrush Union. Their fishing gear is of the worst description. They never received any aid from Government whatsoever, but always depend on their own poor resources. Whereas the fishermen along the coast of the counties scheduled derive every benefit at the disposal of the Board. There are several electoral divisions whose congested conditions deserve the consideration of the Commission because of their congestion, and the very miserable hovels in which several families at present reside, with as many as ten in family, in houses built of bog sods, and thatched with rushes. The Dromelihy electoral division, area of which is 6,472 acres; valuation, £1,848; population, 1,335, and number of holdings, 913. I beg to refer the Commission to the townland of Sragh, in the above electoral division: area, 1,483 acres 0 roods 6 perches; valuation, £236 10*s.*, with sixty-four ratings on same. About forty of these householders reside in miserable cabins built of bog sods, and, in fact, not fit for human habitation; their holdings are very small, and not large enough for to maintain the poor people in any way approaching decency. The poor people in this townland mainly subsist on the earnings that accrue from the cutting and saving of turf, and loading it on the siding on South Clare Railway. The holdings occupied by these poor people were once wild, barren bog; they carted sea-weed from the shore, and after years of hard work and labour succeeded in reclaiming their respective little holdings, the area of

June 5, 1907.

Mr. Michael Mescal.

which an average does not exceed four statute acres. So congested is this townland that scarcely a year but there is an outbreak of fever of the worst type, which cost the ratepayers of the union a considerable amount of money each time there is fever in the townland. The union sunk a pump in the locality—£40. There is a holding in the centre of this townland on the landlord's hands at present—Mr. Marcus Walsh—area of which is 393 acres 16 perches; should this be purchased at a fair value and parcelled out to these poor people, it would go a good way to relieve the congestion in the miserable novels in which they reside at present, together with the other facilities at the disposal of the Congested Districts Board by way of small loans for building purposes. Portions of the electoral divisions of Einagh and Knocknagone are in a congested condition, some of the houses built on the verge of the bog—rather on very unsanitary sites. There is a good deal of barren mountain as well as of marshy land in the union which requires cultivation as well as drainage, should a properly constituted Board be formed, with borrowing powers. The Land Purchase Act of 1903 is no improvement on the previous Land Acts. Prices obtained for land from 1885 to 1896, and up to 1903, in this union ranged from thirteen to eighteen and a half years' purchase, with a decadal reduction of 10 per cent. every ten years; whereas the price paid for land since the passing of the Land Act of 1903 varies from eighteen and a half to twenty-four and a half, with a bonus of about three years' purchase added. Very few sales have taken place in this union since the passing of the Act of 1903, owing to the high prices demanded by the landlords, and their unwillingness to sell. Consequently there are very few sales in the union. I am conversant with an estate in this union; the tenants held under lease for a term of thirty years, from 1857; the gross rental was about £220; valuation, including buildings, £119; number of tenants on arable holdings, fourteen. At the expiration of the lease, and at the passing of the Leaseholders' Act, the tenants applied to the Land Court to have fair rents fixed. The rents were reduced to £140, or a reduction of £80 per annum; these tenants were paying this £80 over and above the value of their holdings, as decided by the Land Commissioners of the day. The tenants had paid £2,400 during that period—in very depressed times—over the value of their holdings, owing to the bad laws relating to land tenure. I need not point out to the Commission how serviceable this amount of money would be to the tenants; what amount of improvement they could effect during the period of thirty years. I mention this case, it being only one of the many cases of rack-rented estates in the Kilrush Union. Therefore, I have no hesitation in stating that the exorbitant rents demanded in the past is the principal cause of the great poverty in this union. Tenants on some estates have agreed to purchase at rather high rate of purchase owing to certain amount of arrears being wiped out, and proceedings being stayed to recover the current years' rent. It would be advisable the Estates Commissioners would have, in future, recourse to inspection on all estates sold under the Land Purchase Act, 1903. I maintain that direct sales by landlords to tenants, even at a low price on uneconomic holdings, does not better the condition of the tenant, because such tenant is devoid of capital to work his holding, even at a reduced rent; land without capital is almost valueless to the occupier. I am of opinion land purchase at a fair value is the first step leading to the future prosperity of any country. The farmers and small householders of the union depend, to a certain extent on money, the earnings of their families and friends who emigrated to America, and Australia, and other countries, to enable them to tide over the depression in this union. Emigration still continues in this union. The farmers are devoid of capital, but living from hand to mouth. The Manchester Co-operative Association has built four principal creameries, with many auxiliaries in connection with each creamery. The company advance money to the farmers at the rate of £5 per cent. to enable them to buy cows to stock their lands. The principal and interest is to be paid to the company by giving the milk to the creamery company, the latter keeping half the price of the milk per month, or, as per agreement, until such time as the money advanced is repaid. Were it not for the money advanced by this company I am certain many farmers, with a radius of five miles, would be without a beast on their land.

40324. Most Rev. Dr. O'Donnell.—You consider that the grass farm to which you have referred in Clonadrum should be acquired and used for the enlargement of small holdings on the margin of it?—Yes.

40325. You also seem to hint that such an institution as the Parish Committee would be very much in place to encourage the people to improve their homesteads?—Yes.

40326. Mr. Kavanagh.—Is the Manchester Co-operative Company a company that has come into the district to start a co-operative creamery?—Yes. It is a foreign co-operative creamery, and the farmers have no voice in the matter. You may really call it a private company.

40327. Is it doing good in the district?—It is enabling the people to live, that is all. Were it not for their intervention at the time, to my mind the farmers would be without stock or cattle enabling them to tide over a very miserable existence.

40328. What price do they get for their milk?—A very poor price, from 3½*d.* to 4*d.* a gallon. which, I think, is about the highest. I have nothing to do with this co-operative association, but I have learned of it from the people who are supplying the milk.

40329. You have no other creameries in the district?—No; we had not capital enough to start co-operative creameries. Efforts were made to start them and the people had not sufficient funds, and the attempt fell through.

40330. How long has this creamery been in existence?—About seven years, I should think, at least.

40331. Have you noticed that the country goes out of tillage when the creamery comes into it—we have had evidence in other districts, especially in Leitrim and Sligo, that the presence of a creamery diminishes the tillage—is that your experience?—I don't think that the erection of this creamery had anything to do with diminishing the tillage.

40332. It has diminished, of course?—Of course the tillage has diminished. The cost of producing it is rather expensive, and the capital was not in the country except what labour farmers could have in their own resources.

40333. Tillage would pay with a man who had his own labour?—Yes.

40334. What would you say was the size of an economic holding in this union of Kilrush—what would a man require to have to enable himself and family to live comfortably?—That depends on the quality of the land on which the holding is situated.

40335. You know Kilrush Union pretty well—suppose you were to enlarge these holdings of £10 and under, and you had sufficient land in the district to do so, to what extent would you enlarge them?—I would enlarge them at least to about £20 valuation.

40336. How many acres would that represent about?—It would represent, as land is situated at present about forty Irish acres.

40337. That would consume an enormous amount of land if you were going to make the holdings under £10 valuation economic?—I would not suggest all the holdings. I refer to the uneconomic, that is, these people between one and five acres, and the people living in the most miserable hovels. It is to these that I refer.

40338. People under £5?—Yes.

40339. Mr. O'Kelly.—Do you say it would require forty acres in the County Clare to make these holdings economic?—No. The Chairman referred to £2 valuation holdings, and I was referring to £55 valuation holdings.

40340. What is the general quality of the land in Kilrush Union?—It is very poor productive land.

40341. Mr. Kavanagh.—I asked you what would you consider an economic holding, and you said one of £20 valuation. I then asked you how many acres that would represent, and you said forty. Therefore practically you say that forty acres is the size of an economic holding in the Kilrush Union?—Even with forty acres it might not be considered an economic holding, because there are many circumstances in connection with the term economic holding.

40342. Mr. O'Kelly.—What is the circumstance in your view?—The circumstance that if a man has forty acres of barren bad land without sufficient capital that could not be considered an uneconomic holding.

40343. Mr. Sutherland.—But of the average land about here, would it be necessary to have forty acres

to maintain them properly—could a man and his own family till a farm of forty acres?—That depends on the family. If he had twenty-five acres he might be just as comfortable as the man with forty acres.

40344. The measure would be the amount that he would be able to labour without paying for?—Yes.

40345. Mr. KAVANAGH.—Have you any experience of the working of the Agricultural Committee in this district?—Yes. I am a member of the committee. They put certain schemes into operation. They have poultry keeping, live stock and prizes for agricultural holdings and farms, and an itinerant instructor going all over the county giving lectures, teaching the people how to till according to the best methods of agriculture.

40346. Do you think that these schemes benefit small holders as much as large holders?—The schemes are new, and only in operation for the last six years in this county. Very likely some benefits will accrue, but there is no substantial benefit at present

40347. You think not?—I am certain of it; but the schemes will develop after a while.

40348. Have you any experimental plots in this district?—Yes, outside the town. We had no plots in the urban area, but you have them all over the entire county.

40349. Mr. SUTHERLAND.—Where is the nearest one? Up at Moyasta, about five miles away.

40350. Mr. O'KELLY.—What are your reasons for stating that after a while good results would accrue from the working of the Agricultural Committee?—Every beginning is weak, but I believe that when the whole scheme is developed later on some good will accrue.

40351. What is your experience of this committee during the last six years—has it reached the more needy class of the population?—It has, because there was no exclusion.

40352. There was no statutory exclusion of anybody, but have you given assistance during the last six years to small farmers?—Yes.

40353. What schemes have you in your opinion for their advantage?—A live stock scheme, and butter-making instruction, poultry and domestic economy instruction, and an itinerant instructor going all over the county.

40354. Take the last first—what is the itinerant instructor doing?—He is giving lectures in the different centres on up-to-date methods of agricultural cultivation.

40355. These are all lectures given in the local schoolhouse?—Yes.

40356. Are these lectures accompanied by any practical demonstration on agricultural plots?—Sometimes they are.

40357. How many of them?—I could not say.

40358. What is your opinion of the value of itinerant instruction minus practical demonstration?—To my mind itinerant instruction is perfectly valueless without giving practical proof of such instruction.

40359. Therefore, that being your view, in the majority of cases at present the itinerant instruction is valueless?—I would not say so, because there are several plots in the county here, and they are becoming more numerous.

40360. Is it your opinion that the schemes promoted by the Agricultural Department and the local committee are of use, and that the money is well expended?—Let us take what good is in them out of them.

40361. Is it your opinion that the schemes promoted by the Department and the local committee are suitable to the County Clare, and have been productive of good results?—I think that the results are not very great up to the present.

40362. Mr. KAVANAGH.—There are some results?—The results are very little.

40363. Mr. O'KELLY.—We have now six years' experience of these schemes which are endowed by the Department of Agriculture and by the County Committee. I want to know have any practical results accrued from this expenditure, and if so in what direction we must look for them?—We had not in the County Clare an ordinary agricultural instructor until two years ago.

40364. You had other schemes?—Yes.

40365. Kindly lay a finger on the particular scheme which has justified the County Committee in incurring the expenditure that it has incurred?—Really I could not, because there is not much benefit accrued as yet, but at all events we are hoping for the best.

40366. But in so far as the past six years are concerned there are no tangible results to its credit?—No, not very much.

40367. Are there any?—I would not say but there are. First of all domestic economy and manual instruction; they are under the heading of technical instruction.

40368. What is spent on manual instruction?—I could not tell you.

40369. A considerable sum is spent on it?—Yes.

40370. How many centres of manual instruction are there in the county?—A great many centres.

40371. What is the period intervening between the coming of a manual instructor to a district to teach a class and his advent to that district again?—It might be two years, or twelve months at the least.

40372. So really it is sporadic and not continuous instruction that you have under that heading?—Yes.

40373. It is often possible that when an instructor comes back after such a long absence his former pupils in that district have disappeared altogether?—Some of them.

40374. Do you regard that as a scheme on which you are justified in spending considerable sums out of the local rates?—To my mind the schemes should be improved so as to give a longer course of instruction, because the manual instructor only devotes six weeks of his time at each centre, except in the urban areas.

40375. Devoting six weeks to manual instruction merely results in turning out what you call handy men?—Exactly.

40376. But it would be idle to say that they have any really practical knowledge of the subject that is supposed to be taught?—Six weeks will only enable the pupils to handle tools, &c., for the first time.

40377. The teaching they get leads to nothing?—If they drift into farming they will be able to make small gates and finish up other articles in connection with the household.

40378. How many pupils are usually in one of these classes?—From twenty-four to thirty-six.

40379. How much money have they spent on domestic economy?—I could not exactly say.

40380. Could you tell me the proportion between what is spent on domestic economy and manual instruction, and upon live stock schemes, subventions of shows, from which schemes the richer portion of the community derives the greatest benefit?—I did not go to the trouble of making up these returns, but I know that every opportunity is given to the small farmers to avail of the horse-breeding scheme, because two-thirds of the nominations are devoted to farmers in the lower grade. Therefore, the farmers in the higher grade are excluded to a certain extent; but then, of course, they contribute to the raising of the rate to carry these schemes through, and they are included then, of course, in the scheme. In the County Clare we levied a rate of a halfpenny in the £ last year for agricultural and technical instruction, and I believe this year it is three-farthings in the £.

40381. The results so far justify an increase of the rate?—The County Council were of opinion that no matter how small the results, they were justified in levying a rate of three-farthings.

40382. Most Rev. Dr. O'DONNELL.—I am interested in what you said about those creameries. From your statement it would appear that the word co-operative scarcely applies to them so far as these localities are concerned?—Yes.

40383. They are a mere private enterprise?—A private enterprise, coming over to this country speculating to advance their own interests.

40384. What attracted my attention in your statement with reference to them is this. You are confident that it is due to their agency, at all events, that farmers were able to acquire stock who otherwise could not stock their land?—Yes; and the reason I mention the intervention of these creameries was to show the poverty of the union and their inability to procure the money otherwise to stock their lands.

40385. How is the loan repaid?—It is repaid in milk at the rate of 5 per cent.

40386. That goes to show that however much we may deplore borrowing for the population, yet in its present poor circumstances some system of industrial borrowing had become necessary?—Yes.

June 5, 1907.

Mr. Michael Mescal.

40387. If they had not been allowed to borrow in that way apparently they would not have got on at all?—No.

40388. Whatever the details of the scheme may be that is one merit that attaches to the introduction of those creameries?—Yes.

40389. Is it the case that where the creamery system prevails there is a tendency to starve the family and not supply them with a sufficient quantity of milk?—I did not hear that stated, but of course I heard it stated that the quality of the separated milk was of the very worst.

40390. In answer to Mr. Kavanagh, you said that an economic holding about here would be about forty acres; but take one of those small men whose holdings are from five to ten acres; would not the circumstances of such a man be enormously improved if you gave him an addition of five acres of good land?—It would be a great acquisition. With that quantity of land added to his present holding you might term it an economic holding.

40391. I don't wish to suggest that the addition of five or seven acres would be a satisfactory arrangement, but would not it be a great improvement on his present condition if, leaving him what he already has, you gave him five, six, or seven acres of good land?—Yes.

40392. Getting rid then of the question of economic holdings and economic theories, and coming down to practical life, one of the small occupiers in Clare would be greatly benefited by the addition of a few acres of good land to his present holding?—I would think so.

40393. Is the general trend of your evidence this, that while Clare is not scheduled, there are to your knowledge in Kilrush Union districts as much needing the differential treatment of the Congested Districts Board as the districts already scheduled?—Yes. I may mention that I was appointed to give evidence on behalf of the Clare County Council, but when I learned that the Commission had arranged to sit in different parts of the county I thought it sufficient to confine my evidence to the rural district of Kilrush.

Mr. George Casey examined.

Mr. George Casey.

40394. Sir Francis Mowatt (*in the Chair*).—You are a farmer, Mr. Casey?—Yes.

40395. Where is your farm situated?—At Quilty West.

40396. Mr. Sutherland.—What union is that in?—Kilrush union.

40397. Sir Francis Mowatt.—Just give us the particulars of your holding. What is the acreage?—Eighteen acres—a freehold property.

40398. You don't pay rent for it?—No.

40399. Did you buy it?—It is an old estate.

40400. You have got a document, and perhaps you had better read it, and we will ask you anything that occurs?—I am a farmer and publican holding fifteen acres freehold property, and reside at Quilty West, in County Clare. I am familiar with the condition of the fishermen and labourers of my district for the last fifty years. I believe that the fishermen of my district are badly in want of proper accommodation, such as sheds for the shelter of their canoes. Every year there are a few of the canoes broken when the storm comes, as the harbour is very open and affords no shelter.

40401. When you say "canoes," are they small deck boats?—Very small, frail boats.

40402. Are they deck boats?—No; very small boats, with small oars. They are covered with canvas. My view is that the Congested Districts Board should encourage the fishermen in my district by giving them proper boats and gear to go to sea, as their canoes are too small to venture far to sea in.

40403. Just tell me what sort of fishing these small boats do—is it line fishing or nets?—Yes, and nets.

40404. They fish for mackerel?—Yes.

40405. In what month?—During the months of autumn, and from that to December.

40406. Mr. Sutherland.—Is there a harbour at all at Quilty?—Yes, at Seafield pier.

40407. Is there a harbour there now?—It is very shallow. It would require something to be done with it.

40408. Sir Francis Mowatt.—It is silting up?—Yes. It is a very good pier, and all the money spent on it will be lost unless there is something done in the cutting of the channel to it.

40409. Mr. Sutherland.—Are there many fishermen at Quilty?—There are about 150.

40410. Most Rev. Dr. O'Donnell.—Are the rocks outside the pier?—Just close by it. There was a man drowned when he was coming in there last year. It is very dangerous to the fishermen when they are entering.

40411. Perhaps if the rocks were removed the sea would break with greater fury?—It would be a very good thing if they were cut away, and most profitable.

40412. You think the shelter would not be reduced if the rocks were taken away?—There is shelter required for the poor fishermen's canoes besides the cutting of this channel at all. Every year a few of the canoes are torn away by the storm.

40413. Mr. O'Kelly.—You spoke of 150 fishermen. Do you include the families?—No; the men themselves, young and old.

40414. Would not some of those men belong to the one family?—They may.

40415. How many boats would the 150 men represent?—About 35.

40416. Sir Francis Mowatt.—That is five men in a boat?—Three in each canoe, and there are about 35, as far as I can learn, in their coming and going in and out there.

40417. Mr. Sutherland.—Is there a built harbour?—There is a built harbour.

40418. Is there shelter for a sail boat?—Oh, well, it could be made feasible for a sail boat.

40419. And why have not they sail boats, then?—They require them now. They are trying to get them as best they can, and they would work them now if they could only get them. The mouth of the channel is very dangerous in bad weather. The rocks should be cut away, and the channel deepened a few feet. As it is it is very discouraging to the poor fishermen. There was a fisherman drowned coming in there last October, and another a year before. Seafield pier can be encouraged in many ways. If the channel was cut deeper schooners could come in there. There used to be schooners coming in there a few years ago, and through the cutting not being done properly they cannot now.

40420. How far is Seafield from Quilty?—About three-quarters of a mile. There were about eight hundred barrels of mackerel cured there this last autumn season.

Sir Francis Mowatt.—That is at Seafield.

40421. Most Rev. Dr. O'Donnell.—Have the fishermen ever brought before the Fishery Inspectors the need to have the approach to the pier at Quilty improved?—They have, my lord.

40422. Was there a correspondence?—There was, my lord, and there was an inspector sent to the pier a few years ago, and even last year, to see could they get something to be done.

40423. What did the inspector say?—That they required more money to have something done with it.

40424. Did they consider that what the fishermen wanted was a good project?—Yes, they did.

40425. Sir Francis Mowatt.—Do you know was the inspector from the Board of Works?—The Board of Works.

40426. Mr. Sutherland.—Of course, you have the advantage there of having a railway?—Yes; it is very close—it is a mile to the pier.

40427. And you think there should be an effort made to develop the fishery there?—Yes; and there is another disadvantage that the fishermen have—that they have to moor their nets and leave them

out overnight and go out to them in the morning, and two or three times in the year it happens that the storm comes while they are out at the mooring, and they are drifted away in the morning.

40428. Are they not able to ride by their nets all night?—They cannot fish that way at all.

40429. Could the canoes not be left out?—No; they have to come in and leave the nets there, and then they go out in the morning early to meet their nets, and then the storm comes and the sea gets up, and between that and the morning they are drifted away and thrown on to some other shore, and that happens two or three times in the year.

40430. Sir FRANCIS MOWATT.—To sum up your evidence, you advocate the cutting away of the rocks to enable the boats to have free passage into the harbour, that some shelter should be built in which the canoes could be protected, and that if possible a few steam trawlers should be bought and let out to fishermen?—Yes, sir. The men are fully inclined to get some new system of fishing besides what we have. The young men are thoroughly inclined, if they could get some small boats, for a new system, and they would have a great advantage if they had a change of system.

40431. At present do they fish for mackerel only?—Yes, for they are fishing in very small boats, and the bank for ling fishing is very far from them.

40432. Mr. SUTHERLAND.—How far?—About fifteen miles away from where they are; but if they had boats they would surely go to the bank.

40433. Most Rev. Dr. O'DONNELL.—Could a trawler rest safely at the pier at Quilty?—Yes, and all the money that has been spent will be lost unless something is done to it.

40434. Mr. SUTHERLAND.—You have that pier?—Yes.

40435. And you have the railway?—Yes.

40436. How do you account for it that the fishery is not developed more under these favourable circumstances?—The entrance to it is very bad. It is too shallow.

40437. Most Rev. Dr. O'DONNELL.—Are the men in the village that one sees at Quilty all fishermen?—About two miles from that all along round there there are more. There is Seafield and there is Clonahinchy.

40438. But taking Quilty village itself, are those men that live in the cottages fishermen?—Yes; most of them.

40439. They are a large body?—They are a nice little population, and most of them try to be industrious, and there is an industry there, that is to say, the kelp industry, that I want to draw your attention to.

40440. Sir FRANCIS MOWATT.—Briefly speaking, besides the items of improvement that I have recited to you you are in favour of getting this district scheduled if you can under the Congested Districts Board?—Yes, indeed.

40441. And you are probably aware that the Kilrush District Council has passed a resolution to that effect?—Yes. There is the kelp industry there, too, that is wonderfully put back, from the way it is now.

40442. They have some in this year?—Every year. This year the kelp industry in my district is very bad, owing to the want of opposition. There is only one buyer there.

40443. Owing to the want of competition?—Yes, owing to the want of opposition. It is confined to the one company.

40444. Mr. SUTHERLAND.—Is that Sandford and Company?—It is Fairleigh and Company, of Glasgow, that are buying, and they give whatever price they like, and the price they are paying this year is £2 10*s.* to £3 15*s.* per ton, and that is not able at all to pay the poor man for his labour. In my view there should be a factory established in the locality for this kelp industry, as it would give employment to a lot of poor people along the seashore, and prevent them from emigrating to America, and the population along the seahore is about 500, young and old. I remember the kelp to be paying from £6 to £7 per ton some few years ago. It is not very long at all. There was opposition then, but now the companies have settled with each other. The company that is buying kelp in this country is very large. They buy all the kelp in the different counties besides this county. They buy it in other counties along the seacoast, and won't let any other company buy but themselves. They supply and give to the other companies a certain amount of kelp to keep down prices, and the poor people have no profit for their labour. There are about seven or eight hundred tons of kelp made in my district every year.

40445. Sir FRANCIS MOWATT.—I am sorry to say that the kelp has lost its value. I am afraid another competing company would not help you at all. It is not worth more than that now?—These companies were coming in every season some years ago.

Yes, but they found out another way of getting what they wanted.

40447. Mr. SUTHERLAND.—You will understand that it is not because there are not more companies competing that the price has gone down. It is because other sources of iodine have been discovered?—Surely, the poor people won't be able to take this kelp at all, for it does not pay them, and they have no other industry except fishing, and they are wonderfully put back in price. The price is very poor.

40448. The price used to be £20 a ton?—I have not seen that.

40449. Sir FRANCIS MOWATT.—Any other point?—No.

Rev. JAMES CLANCY examined.

40450. Sir FRANCIS MOWATT.—What do you wish to bring before us, Father Clancy?—Some time ago I saw that my name was placed amongst those of witnesses that were to give evidence on behalf of the County Council, and I endeavoured to prepare statistics and heads of evidence, but I afterwards found that a different system was adopted, and there was another representative sent on behalf of the County Council, so I dropped the preparation of my evidence then. However, there were a few points that I heard to-day in consequence of which I would like to give a little evidence on some of the points that were made. In the first place I do not regard the advantages accruing from the Agricultural Department as commensurate with the outlay, and unless there is a very radical change in their methods I do not think that it will be a benefit to the country to have the outlay continued much longer. The system that is adopted generally is to send round a lecturer. The lecturer comes and gives lectures from time to time, and he explains things on a black-board, and if you were a shorthand writer, and took notes, you would have some advantages from it, but otherwise I do not see how an ordinary farmer, that goes to listen to the lecture, can benefit much by it. I have again and again endeavoured to impress upon the Committee the necessity of having agricultural plots to show, what I have called agriculture by demonstration, by method. My idea of the way that agriculture ought to be taught is that there would be a plot in some central place, and that notice would be given to all the people in the neigbourhood of the plot that the instructor would come, and that the owner of the plot, under his supervision, would carry out all the steps necessary for the production of crops, and that the people would have an opportunity of seeing each step taken in the agricultural process. Because my idea is that the people of a district in which agriculture is the principal industry require technical education for agriculture just as much as people would require technical education for anything else, and unless each step of the process is shown to them they have no more chance of getting any advantage from seeing merely the results than if a carpenter were to hand a finished chair to an apprentice and say, "That has been made by one of my men."

40451. Your object would be then, I presume, to have a resident instructor there?—I would have a man resident in the county, and I would have him going around in a certain district, and I would have notice given in each district when he would go round, so that the farmers could assemble and see the manner in which tillage should be carried out, and not that he should merely come at the end of the season and show the potatoes growing, and say, "That is what

June 5, 1907.

Rev. James Clancy.

can be done by improvement." And even the plots the Department has are not shown, because Mr. Mescall gave evidence, and spoke of a number of plots going on, and now, to give you an idea of what that means, a short time ago a statement was made by an instructor that he had two plots in Moyasta, and I made inquiries among the people of that place, and the people did not know that these plots existed at all. So they got no instruction, and they saw no result, so that up to the present day, after several years, the only result that I can see, the only really tangible results of the agricultural scheme are the payment of salaries, and unless some change is made, and some radical change, in the method by which they work the itinerant instruction the County Council would be justified in declining to go on with the scheme much longer, for, as I have said, the results are not commensurate with the outlay.

40452. Is it the County Committee that works with the Department?—Yes.

40453. And they take, I presume, an interest in the people of their own neighbourhood?—Yes, they do.

40454. And has this plan of yours been brought under their notice?—I have brought the matter of the agricultural plot under their notice.

40455. What reply have you had to that?—They accepted their instructor's idea that all that he had to do was to have the plots tilled and to let the people see the results, and that it would not be possible to have notice given to the people in the neighbourhood that he would be there on a certain day to have the thing carried out, so that all that the people can see will be this, that after Mass on a Sunday, say perhaps in the month of July, they will see that there is a good crop of potatoes; but how it has been produced, and by what seeds and methods, they know nothing, and Mr. Godfrey won't tell them.

40456. He won't tell them?—Well, he does not hold it to be part of his duty, and the Committee do not insist upon it to be part of his duty.

40457. Mr. KAVANAGH.—Do they not publish a report at the end of the year?—Yes.

40458 Would not that rather meet your view by showing that by adopting certain methods you arrive at certain conclusion, and there is a certain result, and from listening to one of the lectures would not a farmer understand what to do with regard to certain things, such as the depth of drill, and the width of drill, and a variety of things of that kind that should be adopted under a system of proper tillage?—I hold that the thing should be actually going on under the eyes of the people, and that they should have an opportunity of seeing these things done by the farmer under the direction of the agricultural instructor.

40459. Most Rev. Dr. O'DONNELL.—It should be done on the class of land that they themselves hold?—Certainly. There should be an ordinary plot taken, with ordinary land, such as ordinary field and bog, and the instructor should show what can be made of the land such as the people hold.

40460. Mr. SUTHERLAND.—Like a demonstration in anatomy?—Precisely.

40461. Most Rev. Dr. O'DONNELL.—Perhaps you were not here when Father Glynn suggested that it might be better even to take a small farm and to work the farm properly in a model way in a particular district?—That is a very good idea, but the objection to that would be, I think, that there should be a great number, and that consequently in the result they would be more expensive. If you take a public farm in Carrigaholt, that will be very good for the people of Carrigaholt, but you cannot have one near that again. If you take a plot at Carrigaholt you would want to do so at other places also.

40462. So far as it would go, the farm would be better?—It would.

40463. It would give more instruction?—Yes.

40464. And in a wide area surrounding, farmers could be better shown how their own farms might be treated?—Certainly.

40465. The objection you mention is a very serious one, of course, but supposing the instruction by means of that farm has gone on at Carrigaholt or other such places for four or five years might not that farm then be sold at the market price and the instructor then sent on to another locality?—Oh, decidedly.

40466. It would be good as far as it went?—I believe that would be very good. There could be no question at all of the immense advantage of the suggestion of Father Glynn.

40467. Do you think also that agricultural instruction should be given in the National schools, especially the bigger schools?—Oh, certainly, and it is extraordinary that it has not been adopted long ago.

40468. Do you think it is desirable, in an agricultural country, that boys should close their school career without having been brought into contact with practical agriculture at the school?—I think it is intolerable.

40469. Do you not think it would be a good thing to have a practical teaching of agriculture?—Yes; in an agricultural country like Ireland, in which almost the sole industry is agriculture, everything possible should be done to give the people instruction in every way that it could be given to those who are to make their livelihood by it. Now, with regard to the fishermen, there are about ten boats in Kilkee, and eight boats in Coosheen and Corbally, that is, in the parish I come from, and they are the ordinary canoes, currachs, and there is a crew of three for each boat, and one of the ameliorations that I would suggest would be technical instruction to the fishermen in the most improved and up-to-date methods of curing their fish.

40470. Sir FRANCIS MOWATT.—Of curing their fish?—Yes, so as to place them properly on the market; and I have been informed that the methods in other fishing countries, like Norway and others, are more up-to-date than ours for curing, and consequently, when the fish are sent to America, which is the great market for mackerel, which is the principal fish taken here, the price given for the Irish article is much lower than that given for mackerel cured by approved methods.

40471. I thought Irish-cured mackerel fetched the highest price in America?—Well, I have been informed not.

40472. Perhaps you are not quite so up-to-date in your curing as other parts of the country are, but can you give me an idea at all as to the amount of mackerel exported from here. Is it a regular export trade—what happens the mackerel—is it half-salted?—When the mackerel is caught here it is generally sold on the spot to dealers.

40473. And cured as the catch comes in?—Yes and I think these dealers cure the mackerel and export it to America.

40474. They cure it here on the spot?—Yes. You have got evidence of one mackerel buyer to-day, Mr Murray, who buys fish in Kilkee neighbourhood, and think he buys it as it comes from the net, and exports it to America.

40475. It is his business, not the fisherman's business?—I have seen the fishermen themselves curing it, but I cannot say exactly whether it is cured by the fishermen or whether he does it afterwards.

40476. Mr. SUTHERLAND.—The probability is that he buys the fish fresh and cures it himself?—Yes. Now, with regard to another point, it is difficult to cope with congestion when we have no untenanted land for the purpose of enlargement of holdings.

40477. Out towards Loop Head?—No; nor in Kilkee, nor in Kilrush.

40478. But in the county there is?—There is about Burren, and there is in North Clare; but in our immediate neighbourhood there is practically no untenanted land for any practical purpose, at least for the purpose of grappling with the problem of congestion in their immediate neighbourhood; and therefore I lay more stress on improved methods of agriculture. If there is to be improvement in the condition of this place it must be by the people making the most of the land they actually have, because I am afraid it is out of the question that they can have more land; and therefore, I advocate that more care should be bestowed on teaching the people to make the most of the land they actually have. Now, in Kilkee there is a great market for certain kinds of agricultural produce, potatoes, eggs, butter, and all kinds of table vegetables; but unfortunately for one reason or another the people around Kilkee do not attend to the supplying of the wants of the six or seven thousand visitors who are in Kilkee in the months of July, August, and September; and I think that a very good outlet for whatever body will be the result of this Commission will be to teach the people in the neighbourhood of a place like Kilkee how to produce those vegetables, and how to pla

other things of the kind on the market. and, generally throughout West Clare, to teach the people to make the most of the land they have by up-to-date methods.

40479. Sir FRANCIS MOWATT.—Are the lands round Kilkee held in very small holdings?—Well, not very small, but generally small.

40480. About what sort of valuation is there of the holdings there, would you say?—Well, the land round Kilkee is of a rather poor quality, of a very poor quality. As I have said, I was not expecting to give evidence to-day, and I did not make myself up on the statistics that I might.

40481. I do not want statistics, but I mean are the holdings large enough to be able to be converted into market gardens, and that sort of thing?—Yes.

40482. Most Rev. Dr. O'DONNELL.—At Kilkee there is a special demand?—Yes.

40483. Even if no special demand existed, do you not think that if improved cultivation and tillage prevailed throughout the County Clare, tillage would be the best economic use of that peninsula going out towards Loop Head?—Oh, certainly.

40484. There is very little tillage in it now?—Very little. And along with that the means of transit, and if possible help from some outside source like the Department to enable the people to put their produce on the market; I think it would be well if there could be co-operation in that direction by means of which under an official of the Department a number of farmers would bulk their produce and put it on the market to the best advantage. As each one is at present trying to do, it is an uneconomic business, and they are tired of asking for greater facilities in the way of railway transit.

40485. Sir FRANCIS MOWATT.—If you had to frame an agricultural scheme for the county, what changes would you make in the present system?—Well, principally in the introduction to a greater extent of practical demonstration.

40486. Would you carry on this agricultural scheme of bulls, and stallions, and poultry, and such like?—Yes, I see no objection to that, but with regard to the poultry, I think the finding of a market for the poultry is a very important thing. That has not been so well carried out in Clare as in other places.

40487. You are dependent on local buyers?—Yes.

40488. But the agricultural instruction you take exception to?—Yes, particularly.

40489. Mr. Mescall said it had been only in operation for two years?—Yes.

40490. Could you see much improvement in two years?—Not the slightest.

40491. Could you expect to see much improvement in two years?—No, I could not, and I could not expect to see improvement in forty years if things are allowed to go on in the way they are.

40492. But you have an agricultural instructor?—Yes.

40493. And do you think that he knows the climate and soil?—I have no doubt that he does, and he ought to know Clare very well. I do not question his ability to do it at all, but I do not think that either he or the committee look upon the question in the same light that I do, namely, that you should put it on a different footing altogether, but at any rate my idea is that lecturing at the present stage is practically useless, that it is a waste of money.

40494. Lecturing by itself?—Yes, lecturing by itself; and that if you want to have the people properly instructed you must come down and show them how to handle a plot the same as you would teach a man to make a boat or make a chair, and that what the people require to get is an opportunity of seeing the work actually going on. That would be demonstration by method and not mere lecturing.

40495. That is the only change you would make in the instruction?—The main change, because the thing that has struck me most, and that I have given most attention to is the absolute futility of all the schemes so far to improve agriculture by means of lectures.

40496. We have already had a great many witnesses who have given evidence about the schemes of the Department and the local committees, but no evidence from anybody that has propounded an ideal scheme of business. You have apparently gone into the matter, and you object to the agricultural instruction without demonstration plots?—Yes, and demonstration plots in which the work will be done under the eyes of the people, where they can see it actually in progress.

40497. Take the other side of the question, then, the girls. Have you any suggestion to make?—Well, I have not thought out that part of it, but I may say that in the part of the country that I am particularly acquainted with, about Kilkee, I am sorry to say that the girls do not take advantage of the classes in laundry and in cooking. I know that for the last two years or so we have had no class of cooking and laundry at Kilkee, for the simple reason that when the classes were introduced they were held there twice, and it was practically the same girls that attended and in rather smaller numbers.

40498. Was there any reason for that, or could that be remedied?—I do not think so. I did everything in my power by going about amongst them and trying to urge them to come, but they did not come.

40499. Is there any lace industry at Kilkee?—Except that they work locally. They learn it at the convent, and they try to dispose of their work by their friends without anything like co-operation. And Kilkee is specially favoured in that way because so many visitors come, and there is a good market there for Irish crochet. But there is nothing like such a school of lace as exists in other places.

40500. Has it never been tried?—Never.

40501. Have you noticed any particular effects from creameries on the domestic life of the people?—Well, we have no creameries in the immediate neighbourhood here, but I have heard people say that they rather tend to make the people loiter about the creameries when they go with the milk. And then people also allege that it is attended by deterioration of the calves; but I think that is the fault of the farmers themselves and not the fault of the creamery, because the farmers know perfectly well that separated milk is not a proper food.

40502. And you have no village dairies?—No.

40503. Mr. SUTHERLAND.—And you think that the introduction of creameries has had a tendency to put the land out of cultivation in order to increase grazing facilities?—I have no experience of that in my own neighbourhood, and so I will not commit myself to make the statement.

40504. In what way is it that you have had no experience?—No creamery.

40505. But you have had experience of the land going out of cultivation, I presume?—Oh, yes.

40506. And what is the reason of that?—I think a large number of families in the west of Clare have friends in America, and the young fellows look to a life in America rather than to a life at home, and won't settle down doggedly to make the most of the land.

40507. And which is the reason—is it because the young fellows have gone away, or because those remaining behind take no interest in the land?—Both. I may just mention one instance of a deplorable fact, which might easily be remedied if there were a proper spirit amongst the people. I know a man in this neighbourhood—he happens to be a brother of my own—who up to a month ago had sold a large quantity of potatoes to the neighbouring farmers; and I think it an appalling thing that farmers who have more land than he has should pay 5*d.* and 6*d.* a stone for potatoes when they might have grown potatoes for themselves. So that unless something is done to change the ideas and methods of the people and teach them better methods, and give them a greater interest in the land, I do not think there can be much improvement. And I attribute the land going out of cultivation to the fact that those young fellows, looking forward to America, won't work here while they are waiting to go to America and that those remaining behind are generally the weaker portion of the family. The pick of the family will go to America, and those remaining behind do not appear to have the grit to work the farm.

40508. And they might anticipate going to America at a later period?—Yes.

40509. Sir FRANCIS MOWATT.—Those farms that go out of cultivation, what happens to them—do they become derelict?—They go out of cultivation in the sense that they do not till them. That is what I mean. They go out of tillage.

40510. There is another point with regard to the starting of local industries?—Oh, yes, with regard to the starting of local industries, for my own part, I disagree with a great deal of what I hear about the

June 5, 1907.

Rev. James Clancy.

starting of local industries. I think as a general rule the starting of local industries goes on a wrong principle and they generally fail, with the result that you will have people pointing to this as a reason why people should not touch industries at all. Now, my idea about industries is that you can never have anything in the line of an industry successful unless it is taken up on strictly commercial and not philanthropic principles, and unless you have men of business experience putting their capital into it to such an extent that they will have an interest in making the thing pay. If you have people starting an industry with capital, say, of £10,000, and managed by people who have no business training, and very often who will not have more than £10 or £100 in it, I think those things are almost bound to fail, and I do not join in the cry that the Government ought to subsidize local industries of that kind.

40511. The question is whether the Government might go so far as this—that when the conditions of a neighbourhood point to a new industry being able to get on if once started, and there is not at the moment capital available to start it, the Government might consider whether it was worth while, after due inquiries, to start the industry on the assumption that once started it can pay its way?—Certainly.

40512. There can be no question whatever that you cannot keep a permanent industry going unless that permanent industry is self-supporting, and the question is whether it is possible to give a little help to start the industry, which, once on its legs, can pay its way?—So far as I can see of those actually started, I think they are started on a principle that almost certainly leads to failure, that you have not men of experience going into them, and you have not men of capital going into them, and you have not men of commercial experience sufficiently interested in them who will take off their coats to the work.

40513. Mr. Sutherland.—This is a matter that I have no doubt you can speak of from your own experience. May I ask you this question then—Do you know any industry that has been started in Ireland on the philanthropic grounds that you have mentioned that has permanently succeeded?—I do not.

40514. Well, that is an answer to the whole question?—I do not. We hear a great deal about the success of the Foxford tweeds.

40515. What about the Foxford industry?—I am not sufficiently acquainted with that. I believe that was started to some extent on philanthropic principles, but then one swallow does not make a summer.

40516. Do you know any other?—I do not.

40517. Sir Francis Mowatt.—None has come under your notice?—I know of none which has to any extent affected the industrial aspect of the neighbourhood.

40518. Then, really, the sum of your evidence, as you have given it to us to-day is that what you have to recommend is the practical instruction of the people in agriculture?—Yes.

40519. When I say practical, I mean instruction in the actual processes in which agriculture is carried on?—Yes, and agriculture to meet the people in every place they turn, at school and everything of the kind, because that is what they will make their livelihood out of. And that is the principal thing I came to say.

Mr. Thomas K. Daly examined.

Mr. Thomas K. Daly.

40520. Sir Francis Mowatt.—Where do you live, Mr. Daly?—Kilmurray-i-Bricken.

40521. That is in the district of Kilrush?—Kilrush and towards Miltown-Malbay.

40522. Are you a farmer?—I am a farmer's son, and I assist my father in his farming occupation. I am a land valuer and surveyor.

40523. Tell us what you wish to bring before us?—With reference to agriculture and technical instruction, I would say that there should be one school at least in every parish to give instruction in agriculture alone. I do not believe demonstrations or lectures would be much good, because I know that of the people who go to those lectures very few go away from them who retain any part of them. Those people have very little education, and they go away from those lectures without having derived any good in the world from them. I believe in having in every parish one school where boys of the sixth standard could attend, and only boys of that standard or boys who are not able to remain any longer at school, where they would be taught agriculture.

40524. You would have an agricultural school in every parish?—Yes, and funds devoted to other objects at present should be devoted to that agricultural school.

40525. Mr. Sutherland.—Should it not be grafted on the common school, because it would be very expensive to set up a special school in each parish?—I do not think that would be the proper way, because the whole time of the school should be devoted to agriculture, for boys of the sixth standard, or those whose parents can't afford to keep them at the elementary school any longer.

40526. Did you hear the proposal of Father Glynn that an agricultural plot might be established in connection with each school, and that one teacher ought to be capable of giving instruction in the school. Would not that do?—Well, I do not think it would, because you would have to instruct every teacher in agriculture. I would confine it to one school in the parish. It would take a long time to instruct all the teachers now in this country in agricultural matters, and I daresay there are very few of them who have even a preliminary idea of agriculture.

40527. But there are a great many parishes in Ireland?—The funds necessary would be abstracted from other purposes and devoted to other agricultural purposes.

40528. Most Rev. Dr. O'Donnell.—You would have a central school?—A central school.

40529. It would be a great improvement on the present conditions?—Oh, I think so. The people are very backward. Then there is the County Council not carrying out its business properly with regard to the direct labour scheme. There are some large farmers employed where there should be only poor labourers. Large farmers' children are employed on some works, and I do not know why they are employed instead of labourers. They are employed in place of labourers in positions of trust and salaries. I think myself that those employments should be thrown open to the small holders under £5 valuation by lottery. I would only have small farmers under £5 valuation drawn by lot for the work, and have each road divided into mile sections, and let the chairman and secretary and surveyor of the County Council cast the lots for these roads and sections, and divide them out among the people under £5 valuation each year to maintain the roads.

40530. Instead of doing it by contract?—Well, I would do it on contract, and I would debar them from the casting of lots next year if they did not carry it out according to their contract.

40531. Most Rev. Dr. O'Donnell.—Is there no contract labour at present?—They are under the County Council.

40532. And would you suggest a return to the contract system, and limit the contractors to men under £5 valuation?—Yes.

40533. Mr. Kavanagh.—Do you think a man of under £5 valuation would be able to carry out such a contract?—If it was divided into sections. Our district might have 140 mile sections of road. There might be twice as many applicants. I would not limit it to a mile; perhaps two in certain districts, according to price. I think it would relieve the families of those poor people considerably, and I do not think that the State should interfere at all. They have plenty to interfere with.

40534. Sir Francis Mowatt.—Do you mean that two or three of these small holders should join together to take a contract to maintain a piece of road, or would you give to each small holder a half-mile of road to keep?—I would give each person a section, say a section of an Irish mile, divide the roads into sections, and let the county surveyor or his officials, or the chairman or secretary of the County

ıncil hold a lottery for the names of those holders nder £5 valuation, and divide them out by lot.

0535. Most Rev. Dr. O'Donnell.—Would you have competition?—By lottery. They could not all them.

40536. Who would fix the remuneration?—The nty surveyor. They have a scale adopted at sent. I believe they have adopted the prices that sted for the last three years in which the Grand y held the roads.

0537. That makes it intelligible?—Yes.

40538. And the cost is already ascertained?—Yes.

40539. And you would allot the employment in the you suggest?—Yes.

40540. And let each work a mile of road?—Yes.

40541. At the old prices?—Yes.

40542. Sir Francis Mowatt.—Who does the work w?—It is done by the County Council.

40543. Where do they get their labourers?—Some the labourers are children of small farmers, and ne children of big farmers are employed.

40544. Mr. Sutherland.—Is it done by contract?—is mostly direct labour now. It was formerly done contract.

40545. And now the district surveyor superintends e work, and it is done by hired labour?—No; there a special staff of overseers employed at considerable pense to the county.

40546. But they do it by hired labour?—Yes.

40547. Sir Francis Mowatt.—But you are only bstituting one class of labour for another?—I think will do better, because you have very few really *na fide* labourers in the county. They are all nall farmers' children.

40548. Does not contract labour give employment holders under £5 valuation?—Well, I believe so, it I think that would be a better system and more dependent. They would be their own contractors, nd they would give greater satisfaction, and there ould be no influence to get billets.

40549. Most Rev. Dr. O'Donnell.—You say that the sons of the bigger farmers get employment?—Yes.

40550. To the exclusion of men of greater need?—I believe so.

40551. Was there under the Grand Jury the old contract system?—Yes.

40552. And have the County Council departed from that?—Yes.

40553. For the last two years?—For the last two years.

40554. And I suppose on representations made to them?—Yes.

40555. Mr. Kavanagh.—To give employment?—To give employment. Well, about the bar at Seafield, there is a channel cut through the rock for 100 feet, and I believe that should be improved.

40556. Mr. Sutherland.—What is the place?—Seafield Pier. It is the principal fishing station on the west coast of Clare.

40557. Is this about a mile from Quilty?—About a mile and a quarter, and it is the only pier except Liscannor, and there is a circular rock at the entrance outside, and it is very dangerous.

40558. Sir Francis Mowatt.—I think a witness told us that an inspector of the Board of Works had been down to examine and report on it?—Yes, but it appears that nothing is done.

40559. But it is rather an awkward job to carry out?—It would not be very expensive. In fact, the Board of Works people were round recently, and this rock could be very easily removed.

40560. Most Rev. Dr. O'Donnell.—Do you think that the waves would come in with greater fury if the rock were removed?—It is on the northern side that the waves strike it, and then the recoil of the waves if they catch any boat would surely destroy it.

40561. Sir Francis Mowatt.—Is Seafield north or south of Quilty?—South of Quilty.

The Commission adjourned.

EIGHTY-FIRST PUBLIC SITTING.

FRIDAY, JUNE 7TH, 1907.

AT 11.0 O'CLOCK A.M.

At the Temperance Hall, Scariff, County Clare.

Present:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq., C.B.;

and WALTER CALLAN, Esq., Secretary.

June 7, 1907.

Rev. J. Halpin.

Rev. J. HALPIN, Scariff, examined.

40562. Sir FRANCIS MOWATT.—Father Halpin, you are the Parish Priest of Scariff?—Yes.

40563. I see you have got some notes of the points you wish to bring before the Commission, and the best way will be instead of my asking you a series of questions for you to make such a statement as you desire, and then we will ask you any questions that occur to us?—I want to say something to the Commission on behalf particularly of the parish of Scariff that I am interested in, and I think the parish of Scariff is representative to a large extent of the country in this part of Clare, the North-east of Clare. As far as I understand the object and the nature of the Congested Districts Board and its work in other parts of the country, I would say in general that I think it is desirable that its operations should be extended to this part of Clare. I have made some inquiries within the last few days about the class of works that particularly concern this area that I deal with, and I think, considering the nature of the country round here, that your work is very much required for a good part of this parish and of the neighbouring parishes. In the first place, in reference to the land, there is a good part of this district, the northern part, that is a mountainous class of country, reclaimed mountain principally, and some of the townlands are certainly in a congested condition in the ordinary sense of congestion; that is to say, that considering the circumstances of the class of land and of the size of the holdings, I think it is necessary to do something for the people in order to give them an opportunity of being able to live in comparative comfort. In other words, I would say with regard to some of the townlands I have before my mind here, that passing by the question of rent altogether, and in fact if there was no rent at all or no instalments to be paid, I believe that in some places in this part of the country the people could hardly live in comfort, and that the holdings are uneconomic in that way. I have looked at the legal definition of a congested district, and your Secretary has kindly given me the legal definition of a congested district and the conditions necessary to make a district congested, and, as far as I know, the townlands or districts that I refer to would be congested districts even in that sense. I have taken one as a type. It is called Gurtaderra, a parish in the Union of Scariff.

40564. Most Rev. Dr. O'DONNELL.—In what electoral division?—Clonusker. I have taken the number of families and the area of the division.

40565. Mr. SUTHERLAND.—Where is it from here?—It is about four or five miles. I have got a list (*produced*), and without taking up time by reading it, I say the average valuation per head would be only 18*s*., and that there are 85 of them in that townland of less than 30*s*. valuation per head.

40566. Sir FRANCIS MOWATT.—Can you give me some idea of the extent of this townland—do you know how many holdings there are on it altogether?—We have got eighteen families, and the holdings are to a large extent mountainous. So that would give you an idea of the land that some of them are in. It is to a large extent mountain land.

40567. And the mountain land is used for pasture?—For pasture

40568. Is it held in common or is it included in the holding of each occupier?—It is included in the holding of each occupier, and perhaps in some instances the mountain may be held in common. That will be a type of some other districts and townlands, and perhaps more generally of Clonusker electoral division, and of the country beyond that.

40569. Let us take up this at the point you have arrived at. You say there are eighteen families in the townland you have mentioned now?—Yes.

40570 And I suppose we may take that at the ordinary, allowing five people to a family?—Well, in some cases they are very much larger.

40571. A population of 109 in eighteen families—about six to a family?—Yes. Now I need not say so much about the land question, because there will be other witnesses.

40572. I am afraid we must just complete that. You said that the valuation per head amounted to 18*s*.?—Yes, 18*s*. and a fraction.

40573. That is taking the entire townland?—Yes, as far as I got the return. I asked one of them themselves to get a return for me, and they gave me that. Now about the land in the townland, before leaving the land question I would like to say that I think that your Board could do a great deal for people in districts of that kind.

40574. Do you think that the Congested Districts Board could?—Your Board, generally. If it was scheduled I believe you could help the people in such a district.

40575. To make it quite clear, I would ask you to bear in mind that the Board you are addressing now is not the Congested Districts Board, but the Commission; and therefore when you say "your Board" there is a little confusion?—My point is this, that I consider the principal question to be considered would be whether the district is to be scheduled, and whether you might extend the operations of the Board to this district, and my point is that I believe that if this district were scheduled the Congested Districts Board could do a great deal for a townland of that kind, and in the first place I would say that if it were found that the holdings were uneconomic and such that the people could not find a decent living on them, migration would be the remedy in a great many instances, and for those that remained, assistance to improve their holdings, if that be within the ordinary means adopted, and perhaps by some means to subsidise what they got from their holdings by giving more employment in the district by some means that will be suggested later on.

40576. Have you considered at all the question of migration?—Well, to some extent, with regard to where there is a townland in which, from the extent of the holdings and the nature of the land and other circumstances, we are forced to the conclusion that you cannot make the people comfortable. It seems to me that it is evident that you must migrate some of the families. If you have ten families in a townland like that, and it is plain, from a full consideration of all the facts, from the nature of the land and the size of the holdings and so forth, that you cannot get the means of subsistence for ten

milies, then the only remedy that I can see is to e out two or three or four of those holdings and arge the other holdings; and if after that you find t the reduced number of families even cannot get without assistance, then, if you will, try to assist m—there are various ways.

40577. Let us keep for one moment to that question migration, because it is a very serious question. you mean migration to a neighbouring townland do you mean migration to another part of the ntry?—Yes, either. If the first were feasible, by means. If you have no land available, then to e other part of the country. And sometimes the ple prefer to stay in their own locality, but I do not nk that sentiment would guide them altogether in t respect.

40578. That was the first question I was going to you. Have you discussed it at all with any of se families, and have you found any willingness them to be migrated—let us face the difficulty ly—to another part of the country?—Well, I was aking the other day to a gentleman who will give idence here, who was the late Chairman of the unty Council, and he is also a valuer of land, and will probably touch on that subject, and several ier subjects more or less connected with land, and is brought into connection with a great many ople of the class we are speaking of. He said at he found people volunteering to go elsewhere, ople living in poor districts and seeing that their rroundings did not hold out any hope of their ndition being improved, that they were willing to elsewhere. I do not think that the people will ake any difficulty.

40579. Do you mean that the people will be ready go?—The people will be ready to go to a better ace, if they get it.

40580. And have you considered at all the difficulty the other end—do you think that the surrounding cupiers, probably not quite content with the extent their holdings in other parts of the country, would ther welcome or would even render possible the in- usion (I do not mean intrusion in the offensive nse, but as they would look upon it) of people from her districts of the country into the locality in nich they are living?—That difficulty might arise, nd I suppose in some cases it does, and I suppose some cases it has been got over—but I think it ight to be and it must be, because in the localities u contemplate there may not be other people whose ants are like the wants of the people with whom we e dealing. They may be a middling class of farmer, ith thirty or forty acres of land, and I consider at the man with ten acres of land is to be con- dered more than the man with forty acres. And, though he may be a stranger in the electoral divi- on, I do not think he is a stranger in Ireland, and e would not be justified in drawing boundaries.

40581. I quite agree with you that we would not justified, but I am asking you from the practical oint of view, whether you think that a man brought om one part of the country, or from a neighbouring unty, and put down in another part of the county, ould find his life tolerable. That is the position, ot whether we think it justifiable. I should not ink it justifiable, speaking for myself, but what is ne practical difficulty in the case? Of course if nigration is possible on a large scale a very consider- ble difficulty would be got over; but I confess that ne evidence we have heard throughout has not been ry encouraging upon that point. First of all, there the natural indisposition of the man to move from ne people among whom he is living; and secondly a reat indisposition on the part of the men who regard im almost as a foreigner, that he should be brought n, to the exclusion, perhaps, of the son of a tenant. just wanted to make that plain?—Now, I was going say that I do not intend to say much on the land uestion proper, and I am sure that a great deal of hat might be said about the land round here and ts conditions and circumstances would be similar to hat you have heard elsewhere in Ireland—that the ants of the people and the condition of the land ould be something of the same kind; and, secondly, ecause some of the gentlemen who will follow, and pecially the representative of the County Council, ho have a great deal of experience of land, and I would like to leave a great many of those questions bout the land to him. But there are one or two oints that I would like to speak upon that perhaps might have some interest in reference to the land question, that I could say in a sentence or two, and that appear to me to be practical. Well, in this immediate neighbourhood we have purchased more than half the land.

40582. You mean the tenants?—Yes, the tenants have purchased. I believe that it certainly is, from what I see, most desirable that the other properties should be purchased as soon as they can be fairly and reasonably, and also that the evicted tenants should be reinstated. We have got some evicted tenants, and I think that before we come to speak of any other things, such as local industries, the land question seems to be blocking the way to a great extent, because people seem to be incapable of turning their thoughts to anything but the land question, so that as we are told sometimes that the Irish question blocks the way across the water, I am afraid that the land question blocks all other questions that we have here.

40583. Give us some information as to the purchase of land in your district. You say something like half of the land has been purchased?—I think more than half of this parish has been purchased.

40584. Under the 1903 Act?—Yes, the late Act—some under that Act and some before that Act, under the Ashbourne Act. And I may say also that the prices of course here, as elsewhere, have been enhanced since the passing of the new Act.

40585. Have you got one or two concrete instances of that? It is very interesting. Let us have an illustration case under the Ashbourne Act?—Yes. Within the last few days we have had a case within the Ashbourne Act. The Fitzgerald property, which is just bordering Scariff, was purchased at, I think, seventeen years' purchase, or thereabouts.

40586. The whole property?—The whole property. Yes, it is seventeen years' purchase.

40587. That was before there was a judicial rent?—No; first-term rents. Well, even before that we had another property purchased at fourteen years' purchase in Poulagour.

40588. What time was that?—About twelve or fifteen years ago, under the Ashbourne Act also. Poulagour is the name of the townland. That was fourteen years' purchase, and Mr. Fitzgerald's property adjoining Scariff was sold at seventeen years' purchase of first-term rents.

40589. I suppose at the time of the previous purchase that you gave as fourteen years' purchase, there would be no judicial rents?—I am not quite sure of that now. I think there were first-term rents. Well, since the last Act, in a great many cases, the prices are twenty-one, twenty-two, and twenty-three years' purchase, or thereabouts.

40590. Give us one concrete instance, one case?—There is Mr. Stacpoole's case. That was twenty-one or twenty-three.

40591. Second-term rents?—There were first and second-term rents on that. I do not know whether there are any Stacpoole tenants here, but the purchase was about that number of years.

40592 First and second?—First and second. It would be about that at least. In any case it is true that there has been a considerable difference between the price of land since the passing of the last Act and the price that was realised here in some of the cases, 17 years' purchase and 14 years' purchase.

40593. That is even without taking account of the bonus?—Yes, without taking account of the bonus.

40594. Mr. SUTHERLAND.—Have you finished that comparison—you have given us 17 years' purchase?

40594A. Sir FRANCIS MOWATT.—Can you tell us the last purchase that was made?—Well, Mr. Moreland's is not complete yet. I believe it is 20½ and 22½.

40595. In each of those cases the entire estate has been purchased?—Yes; the intention is to sell the entire estate.

40596. And have the landlords in all the cases, or in any of the cases that you have mentioned, retained the demesne and residence?—Well, in the case of Mr. Moreland they have retained the demesne, of course. Mr. Moreland's property is at Tomgraney. Mr. Stacpoole is not resident in this parish, but near Ennis.

40597. And the other gentleman's name is Mr. Moreland?—Moreland, yes; he has retained the residence. A friend of his is living there at present.

June 7, 1907.

Rev. J. Halpin.

40598. Is the demesne of any size, do you know?—Yes, the demesne is of a pretty large size. But I may say that these are typical cases. They do not appear to be greater than the prices generally. They are typical of the present prices in Clare and elsewhere, and I only quote them because they are cases that occur here at present.

40599. Mr. SUTHERLAND.—With regard to those who have purchased longest, those who purchased under the Ashbourne Act, do you say that there has been an improvement in their condition in consequence of the purchase?—I would say so. Generally speaking, where they have purchased there is a decided and immediate change for the better. What I call the magic of ownership shows itself immediately.

40600. That is to say, they have improved the holdings?—They have improved their holdings and they have improved their houses; and as a concrete example of that in particular, one of your members, his lordship the Bishop, walking yesterday evening along the road, saw a property that had been bought, and he seemed to be immensely struck with the appearance of the holdings. One of the cottages was kept in such a style that they got a prize of £3 or £4 or £5 from the County Council for the manner in which they kept their holding and kept the farm.

Most Rev. Dr. O'DONNELL.—I have not seen more beautiful homesteads.

40601. Sir FRANCIS MOWATT.—Were these prizes given by the County Council or County Committee?—There was a scheme here, practically a county scheme, to give prizes for the keeping of the homestead and the farm generally, and I was glad to see that a couple of our people got prizes for the way in which their houses were kept. I do not say that with persons of that kind there was not taste as well as improvement even before the purchase; but, ordinarily speaking, the magic of ownership shows itself immediately—the improved methods and in the appearance of the farms everywhere.

40602. That is your own experience?—Yes; but, of course, there will be exceptions in the case of ne'er-do-wells no matter what you do.

40603. Can you give me an idea of what sort of a reduction of rent has been the result of those purchases?—Say, 6*s.* in the pound—between 5*s.* and 6*s.*, and from that to 7*s.* or 8*s.* in the pound.

40604. And what is about the size of these holdings as a rule?—Well, the better class, thirty or forty acres of land. That holding that your lordship admired last evening was only about twenty, and their reduction will be only £3 or £4 or £5; and as to this cottage, you might take a photograph of it.

Most Rev. Dr. O'DONNELL.—They have got a £3 10*s.* prize, but to my thinking, any prize that was available would be deserved by the aspect of the homestead.

40605. Sir FRANCIS MOWATT.—You say that a reduction of 5*s.* or 6*s.* in the pound is the net result of the reduction of rent on the purchase that has taken place here?—Perhaps, about that.

40606. Mr. SUTHERLAND.—How many years have these people been proprietors?—Well, the first, the principal reduction that I spoke of, would be twelve or fourteen years ago, because I am here ten years, and the purchase was effected some years before, and I may say it is twelve or fourteen years, and there has been a decadal reduction in the meantime.

40607. And there is a shorter term of repayment?—Yes, and I think there are also a great many advantages under the Ashbourne Act that make it more desirable, because I was concerned in effecting the purchase on the Fitzgerald property before the new Act came along, and I believe that the bulk of the tenants thought themselves fortunate in having secured their purchases before the new Act became law.

40608. Sir FRANCIS MOWATT.—Just let me ask you this question upon that. Taking the whole of the present occupiers under these different purchases, should you say that as regards their families it had had any effect at all upon emigration—when these men found their position somewhat more comfortable, their rents or annual payments somewhat reduced, and their possibilities of getting on in decent comfort somewhat improved—should you say that that had to any extent affected the emigration of their sons and daughters?—Well, I would say that it has to some extent, but not to any very large extent, till we subsidize the farmer or give him some other industry; but to some extent it would in this way, that wh a farmer would find himself better off and able t spare the money he might be encouraged to keep his son or daughter at home, whereas formerly he mig think his son if he emigrated would have m chance of settling down to some industrial work tha by living in Ireland. However, the margin of im provement would not be very much, but in son cases it would have that effect, and I think that s far it would, but not very largely. And that remind me of a point that I was thinking of making befo leaving the land question, and it is this—witho going into any details, because I am leaving detai to some of the gentlemen who know more about th details of land—that notwithstanding the reduction of rent that have been made for the last twenty-fi years or so, and reductions of payment after tha by purchase, I must say that though the reduction have been considerable, taken in themselves, and al though the effects are visible naturally in the wa that I have pointed out, that where people hav holdings of their own they naturally and in stinctively, as well as their sons and daughters, tak a greater interest in the holding, and are more thrift than they were before or could be expected to be be fore, and still, although that is true and althoug the effects are visible in the appearance of the house and perhaps in a better system of agriculture, still viewing the financial result generally, I would say tha the result is not at all what we might expect from th changes that have taken place within the last twenty five years, both in reductions of rent first and after wards in reductions of payment by the purchase and I think that is, looking at it generally, an im portant matter to ask the causes of.

40609. Most Rev. Dr. O'DONNELL.—You mean tha the financial condition of the people has not ad vanced, but gone back?—It has not advanced, a least, proportionately, to the reduction of the pay ments, and it has not advanced perhaps also abso lutely.

40610. Mr. SUTHERLAND.—You mean to say tha they have not more money?—Yes. And I hav asked myself the question how that is accounte for, because in some cases the payments no are not half what they were twenty-five or thirt years ago, and it is a remarkable thing if you fin one man having more money in the bank than the had twenty-five years ago. There must be som cause, and I have found two or three causes. Som of them suggested themselves to myself. Others have found from practical farmers, and I though it would be useful and acceptable if I gave you som of those two or three causes which operate both i this district and elsewhere, to explain why a ma who is only paying half what he paid twenty-fiv years ago is not better off now. Well, in the firs place, amongst those causes is this, that prices hav deteriorated, not only of cattle, but of all farm pr duce. Everything that the farmer of Clare has bee able to produce has gone down proportionately. have been asking has the reduction of price in th case of farm produce been in proportion to the redu tion that you have got both in the Land Courts an as the result of purchase, and perhaps generally the would say that the one thing kept *pari passu* wit the other, and that in itself would be sufficient t account for it; but I was speaking to a practica farmer in the last few days——

40611. Let us pause at that for a moment. Yo say that the price of cattle has gone down. Has n the price of cattle gone down for the last twenty-fiv or thirty years?—Yes, and gone down so much tha I am told it would be sufficient, together with th deterioration of other things, in itself to account fo the phenomenon that I have just pointed out to yo just now. A person told me that it would be a easy to pay the higher rents of twenty-five years ag with the prices that they got for their cattle at th fair of Scariff as it is to pay the present rents wit the present prices of cattle and the reduced prices butter, corn, and soforth.

40612. Is the price of butter reduced?—Oh, yes every article of farm produce has been reduced f the past twenty-five years, and I think that that a sufficient explanation.

40613. Mr. SUTHERLAND.—Yes, if it were the fac —I think there is no doubt in the world that t price of farm produce generally has gone down, b

whether in each particular item I could not vouch; but you will have practical tenant farmers after me, and I think they will vouch every single thing. Now, I asked a person within the last few weeks, and he said that it would be as easy to pay the higher rents of twenty-five years ago, and the only example he gave was the price of store cattle then and the price of calves, and he gave me the items, which I have not now; but he seemed to be satisfied that the reduction in prices would be quite sufficient explanation of the question that is before us.

40614. Most Rev. Dr. O'Donnell.—You have specified two sources of income in which a reduction has occurred. One is cattle. Is the other butter?—Butter.

40615. It is well known that the price of butter is less than it was twenty-five years ago?—Yes.

40616. And the price of cattle?—And the price of cattle also.

40617. Mr. Sutherland.—They produce more?—I think other witnesses will be able to go through the figures of the matter, but I take it that it is perfectly well known, and I do not think it necessary to give you the figures.

40618. Are not some of the purchasers putting their capital into the holding now more than they did before, so that it is there?—Yes; that is, some of the purchase people.

40619. Yes, a man who has purchased the land spends his money in improving the property, and that goes on necessarily, and if he were to sell that afterwards he would realise the whole of it and be a richer man. Do you think they consider that in any way?—I do not think there is any intention to sell much in the way you speak of.

40620. As to the emigration that the Chairman spoke of, would not the increased exertions of the tenant for the improvement of the holding keep his sons at home, who would otherwise emigrate?—Yes, that might have some effect?—Yes, but I also mentioned that if the status of the tenant purchaser was improved he would be more disposed to keep his children at home who would otherwise emigrate. If he saw better prospects in the future he might be more disposed in some few instances to keep a boy or girl at home who would emigrate otherwise.

40621. Sir Francis Mowatt.—Just let me draw your attention to this, that the question I asked and that you put forward yourself was whether the reduction of rent had materially assisted the farmer financially, and the first of such reductions of rent which you mentioned to us took place under the Ashbourne Act consequently during the last twelve or thirteen years?—Yes.

40622. Therefore whether that bettered him, or did not better him thirteen years ago does not depend on the price of farm produce forty or fifty years ago, but whether it has fallen off since those rents were reduced. Well, I should say that that is not so, surely, in the case of cattle in the last twelve years, but I daresay you locally know much better than I do that really the butter trade had been almost created during that last twelve years, and Irish butter sells now very much better than it did twelve years ago—it is a difference of something from 7*d.* to 12*d.*?—They say that they found it as difficult to pay even the reduced instalments on account of the prices.

40623. Your illustrations were drawn from the difference between the prices now and twenty-five and up to forty years ago, but the reduction of rent took place perhaps twelve years ago?—Yes.

40624. And therefore whether that was a real assistance to the occupier depends on the alteration of prices during those twelve years?—Yes.

40625. Most Rev. Dr. O'Donnell.—I think this was your statement, or this was the drift of it. You did not contend that if there had been no reduction in rent the farmers would have been able to go on at all. It would have been harder for him to go on and impossible in some cases; and the reduction enabled him to go on somehow?—Yes.

40626. And you contend that those reductions, whether by the fixing of fair rent or by purchase, have not left him financially in a better position than before those processes had taken place?—Yes.

40627. The fixing of fair rents and purchase?—And purchase.

40628. Now Gladstone's Act was passed in 1881, was not it?—Yes.

40629. And you mentioned distinctly twenty five years ago?—Yes.

40630. And therefore we may take it that this reduction has been going on for the past twenty-five years; the reduction in rent or by purchase?—Of course there is sometimes a variation in the price of cattle, but the tendency is downward.

40631. What you wish to put, I think, to the Commission is this, that after the reductions in various ways during the past twenty-five years the farmer is not now financially stronger than he was before 1881?—Yes.

40632. And you wish to put before the Commission that the reduction in the price and value of farm produce has corresponded very largely to the reduction of rents?—Yes, or in the payment of instalments.

40633. From the time the tenants became the purchasers?—Yes.

40634. Then you do not contend that the prices now are lower than they were sixty or fifty years ago. That is not your point. Your point is that they are lower than they were twenty-five years ago?—Yes, lower than they were twenty-five years ago, and I did not say sixty years ago whether they were lower or not, but the apparent tendency is to be lower, and the farmers complain that the reduced price of their produce generally is an equivalent to the reduction of their payments, whether of rent or instalments.

40635. Mr. Kavanagh.—To bear out your argument the prices would have had to fall half during the last twenty-five years. Do you really suggest to the Commission that store cattle have fallen half?—Oh, no; but there are other causes.

40636. But you have put down two causes, one the fall in store cattle, and the other the fall in butter. I admit the fall in the price of butter, but do you really suggest to the Commission that the prices of store cattle are half what they were twenty-five years ago?—Oh, no; I do not believe there is that fall.

40637. Is there any considerable fall in store cattle?—Well, I believe there has been.

40638. In the last twelve years?—Well, there is a variety in the prices, and sometimes changes take place, but I believe the tendency seems to be to fall.

40639. Would the fact of the farmers not being really financially better off now than twenty-five years ago have something to do with Mr. Sutherland's suggestion that he puts more money every year into improvements, and also that his style of living is higher?—I do not know that the improvements mean extra expenditure of money. The improvements so far are by members of his own family, and that does not mean, necessarily at least, a very great expenditure of money. And, of course, if he lives in a better style that may account for it to some extent; but the fact is there, and there is no doubt in the world of it, that the change financially is not so such as we would expect on account of purchase and rent reduction; and that is remarked in other places as well as this.

40640. And yet you notice that there is a considerable improvement in the holdings and in the houses?—Oh, yes, and in the manner of agriculture.

40641. And the comfort of living of the people?—Yes.

40642. Most Rev. Dr. O'Donnell.—You could not deny—you would assert, I suppose—that the standard of living has gone up in a sense, and become much more expensive?—Well, to some extent, in that way. Now, I find some of the farmers say that it is not only a question of the price of produce, but also a question of the productiveness of the land. That the land is not what it used to be. And then follows another consideration, a notable change in the climate. Now, the third point would be an explanation of the second. I believe that the land of the country is not as productive as it was years ago. The climate, of course, is partly, or entirely, the cause of it, and I do not think it is necessary to go very far back in history for an illustration of that, for, take the last month of May—I suppose in the other parts of the country, where the Commissioners were sitting, there was the same kind of weather as in Clare; but certainly the weather that we had in Clare during the last month was not the usual kind of weather we were accustomed to have in Ireland during the month of May; nor, from what we have seen of the month of June, is it normal weather for the month of June. I myself have been remarking that the shrubs and the

June 7, 1907.

Rev. J. Halpin.

bushes all through the country, and the trees, have been burned up, not only by the frosts, but the harsh winds, not of December or March, but of the month of May. Well, farmers would say that it is not only a question of the reduction of the prices of produce that they have to look to, but that the lands are not able to produce what they did before, for instance, when cattle were fit for the market, or stall; that the farmer is not able to produce those cattle now, and you will find practical farmers in this room to tell you that the climate is the explanation of it, and on some of the points that I have touched some of the gentlemen will be able to give you evidence of what has happened in their own cases.

40643. Sir FRANCIS MOWATT.—With regard to the climate, I am glad to hear that you base your observation or complaint upon the fact that the weather during the last two months has not been at all the weather you have been accustomed to in the months before, so that we may hope that it is an accident?—The tendency seems, for the last few years, for the summer months to become colder, and the farmers will tell you that where they produced wheat in the past they don't attempt to produce wheat now, and that where they produced cattle for Liverpool they do not attempt it now, and you will find that the reduction in the prices of cattle and butter is as real as I have hinted at when you come to the farmer-witnesses. The third cause is not necessary to speak of—that is the change in the climate—because it is admitted that there is a decided tendency to a greater rainfall and humidity during the summer months, and that seems to give the explanation of the change in the land with regard to what it is able to produce. I was thinking of saying a word about industries, and suggesting a few things about industries in connection with Scariff. Even a change in the land question is not enough to make people comfortable, at least in many cases, and especially if their position does not appear to be improving in proportion as the land question is being settled it appears to be natural to turn our hands to some other helps, and I ought to say a word about industries. And about industries in Scariff I would like to say that it appears to some of us that it would be an excellent centre for industrial undertakings, both from the fact that there is excellent water power, and a beautiful river just passing outside here, and that we have canal communication with different parts of the country, with Limerick on the one side, and Dublin on the other, and also because, historically, it appears that in the past this place was a centre of industrial activity. I say there is a tradition of it in the first place, and you have, just outside this room, remains of various mills and stores yet.

40644. What particular industries have you in your mind?—I looked at Lewis's Topographical Dictionary, printed in 1837, and it is strange to find that they were able to say that in the immediately preceding years, or at least, some time before that, about the woollen mill, and flour mills, and oil mill, and four or five industries in this locality. There was a woollen mill, and four flour mills, and oil mill, and there was an iron furnace—and in that connection I find that there was iron found in two districts in the vicinity of Scariff—there was an iron furnace in this place, here in the vicinity, and finally a glass foundry, a glass works in the locality; and hats were manufactured. That would be five or six industries in this locality, about 100 years ago. And how they all vanished or disappeared about that particular time it would be hard to say. I believe it is not fair to touch on anything that is contentious or political, but perhaps the Commission will allow me to say that my knowledge of history does not suggest any other cause that would be adequate to account for the disappearance of so many industries about that particular time, except to refer to a certain event that happened about the beginning of the last century. But there was a certain event in the relations of this country and the country across the water, and in or about that time five or six industries that had flourished at that time, and for some previous years, seemed to vanish just as snow vanishes before the sun.

40645. We will not discuss that, except to call your attention to this point, that it was in 1837 that all those industries were flourishing, and that the incident you refer to took place, I think, thirty-seven years before, was not it?—Yes, I think so.

40646. Mr. SUTHERLAND.—Is it the union you refer to?—Yes. I thought it would be a dangerous subject to touch on, but I suppose you are not free.

40647. Sir FRANCIS MOWATT.—We should not be afraid of discussing it, but it would rather prolong the sittings of this Commission, and, as you observe from the debate that took place in the House of Lords, they are already getting a little fractious with us for discussing things at too great length?—I referred to it as a certain political event, and except that Mr. Sutherland was kind enough to touch on it I should only have referred to it by that suggestion.

40648. Most Rev. Dr. O'DONNELL.—I think you were quite free to allude to the union. Your point is that although your information comes from the year 1837 it would be quite natural that an event of that disastrous character would not have all its pernicious results for a considerable time after it occurred?—Yes. I have also got a further reply, that although the authority I refer to was printed in 1837, it does not mean that those industries existed till 1837, but records the fact that some time previously so many industries did exist here, and I find that is suppiorted by the tradition of the older people, and by the fact that you have remains of mills and stores in the locality. With regard to the industries then, I also might remark that some time ago we found in the bed of the river a green stone. There were some variegated nice specimens of stone. For a time we thought that we had found a valuable bit of marble, but I found that what was apparently a variegated stone was the remains of glass works, and that was another argument to prove that glass was made here in or about that time.

40649. Mr. SUTHERLAND.—Have you the material here for making glass?—I believe we have the material—a sort of fine class of light sand.

40650. Silica?—Oh, yes. And that brings me to the subject of what industries should be suggested for the locality, and, of course, the industries that have been mentioned already as having existed, might be suggested, but it would depend, I suppose, very much on the question of capital, the men, and other circumstances; but one thing that may be interesting to the Commission is this, that some time ago I saw some reference in a Clare paper to a peculiar kind of sand that was found on the shore of a lake in this district, Lough Greaney, six or seven miles away, and it was said that it had been used in the past for industries; that it was used by farmers in connection with scytheboards, and it was suggested that it would be suitable for various industries. I asked the landlord, Mr. Arthur Moloney, to send me a specimen of the sand; he did so, very kindly, and I have it here. I sent a specimen of the sand to the Agricultural Department to have it analysed. It was exhibited at the exhibition of Irish minerals a couple of years ago in London, at the South Kensington Museum, at the Cork Exhibition, and in various other places. I had a letter from the mineral expert, and as one result of the exhibition of this sand it may be interesting to know that I had several applications from manufacturers in England and Scotland inquiring about the sand and the conditions under which it could be sent, and the terms of sale. And it may be useful to know that some of them suggested that they wanted the sand for filtration purposes, others for making cement, and others for the manufacturing of glass; so that, Mr. Sutherland, perhaps explains your question a while ago, that some of the inquiries suggested that they wanted the sand for the manufacture of glass. The expert, in giving an opinion on it, said it would be suitable for the manufacture of common rough glass. I think he said that for the finer class of glass it would be necessary, as there was too much iron in it, to put it through some process which might be costly, and he seemed to have some difficulty about the distance from canals and railways. With respect to the starting of a new industry, I thought it would be interesting to the Commission to know that there was such a mineral asset in the place. And also a practical builder in this locality suggested to me that there was a fine class of building stone, a very excellent green stone, to be got from the same district as the sand comes from.

40651. I am sure that we are all much interested in the evidence you have given to us, but we have a lot of witnesses to hear, and I am afraid we must contract?—The only other thing I wished to suggest was forestry. I think the planting of mountain and waste

land in this district is most desirable. I think it is an industry that would give a great lot of employment, and it would be very important, for we have a great deal of mountain and waste land here that would be really useful for hardly any other purpose; more attention has been turned to this subject recently, and for some time past. I think it is an industry that is most practical and most tangible to take up the waste land, and to have them planted. They would give employment immediately, and there are other incidental industries that would follow the planting, where we have a want of woodland.

40652. Most Rev. Dr. O'DONNELL.—You have seen some of the work done in the country?—Well, there are such plantations in Ireland, and of course there are on the Continent, in Germany and France. But there is one striking example in Ireland, and that is the only one that I wish to mention, the plantation carried on by the monks of Mount Melleray. We have a branch of the Order in this district, in Roscrea. In the case of the monks of Mount Melleray, they have purchased a large tract of the Knockmeildown Mountains, near Mount Melleray, and they have purchased it at the rate of 2*s*. 6*d* an acre, and they have planted the mountain with trees, I think about 5,000 per acre, with larch and fir, and trees of that kind, at an expense, I think, of about £12 an acre and gave great employment, and after some dozen years or so, they were able to cut down the clearings of timber, which realised something between £30 and £40 an acre, and left sufficient timber on the ground for future use and for the necessary purposes. And I was just going to say, if time permitted, that I think it is well for us to have an illustration so near at home as that. These religious people were conspicuous in the past for their works in that way, and for clearing and draining lands throughout Europe. In fact they were the earliest agriculturists in various parts of Europe in clearing woods and making canals and drains and so forth, and they have kept up their reputation in this district.

40653. They have done reclamation of land?—Oh, yes, and they are doing it constantly.

40654. And have encouraged others by their example?—Oh, certainly.

40655. I don't mean by the example of their life, but by the example of their reclamation?—Oh, certainly; and they established a branch in this district at Roscrea twenty-five or thirty years ago, and they improved the place. They had not such a scope for reclamation as at Mount Melleray, but they did it to some extent. They came into a broken-down mansion and a large demesne that was a wilderness when they came, neglected, with the fences broken down, and they have in a short space of time changed everything into a paradise. They have not only reclaimed the land, but they have set up mills; they have the most up-to-date machinery there, so that they are a light and leading in agriculture and in modern ways of doing even mundane things to the people for many miles around; and I am glad to say that in forestry they are the pioneers, as their predecessors were 500 years ago in various parts of Europe, and it seems to me that the example they have shown is a striking illustration of what can be accomplished even in Ireland, although we sometimes get credit for being a very spiritual people, and rather unfit for labour and progress. A remarkable book published within the last few years lays it to the charge of the Irish people that we are too spiritual—too spiritual to be successful in this world. It seems to me to be rather a remarkable charge to make against any people that they are either refined or spiritual, and I hope, so far as I am concerned, that whatever the will of Providence provides for Ireland, we always will be found spiritual and refined.

40656. Most Rev. Dr. O'DONNELL.—You yourself have written a book on temperance?—Yes, my lord.

40657. Has it been taken up by the National Board?—Yes. But with regard to that charge, there have been several replies, and very adequate replies to the book that I have referred to, but it appears to me that the example of the monks of Mount Melleray really is one of the best examples that you could get, because they are the very height of spirituality in this country. They are about the strictest Order we have in the Church. They get up at two o'clock in the morning to praise God when some people are going to be. They live all the year round in the strictest mortification; and here they are engaged in such wordly things as building mills with the most up-to-date appliances, and reclaiming land and planting mountains. They hold the vanguard in Ireland in such things as this, and considering the class of land they have cultivated, we may regard them as the best example to demonstrate that a people can be very spiritual and yet succeed in this world.

40658. Mr. SUTHERLAND.—May I ask you with regard to this Order, do they employ labour or do they do the work themselves?—They do it mostly themselves, and that accounts for the cheapness of the labour. Everyone of them, even the Lord Abbot—the mitred Lord Abbot, who has a gold ring on his finger—goes out with his spade and shovel like the rest, and I have seen them doing so in Roscrea. They combine labour and prayer together, and their hours are very long hours. They get up at two o'clock in the morning, and they combine work and prayer; the result is that they reclaim land wherever they are, and they are pioneers of land reclamation and forest clearing, and in Roscrea their flour mills are up-to-date, and in every industry they have undertaken they are admitted by all persons, Protestant and Catholic, within miles to be pioneers.

40659. Are those works successful commercially?—I should say so, but of course they do a great deal for themselves. They grind I believe, corn for the entire people around; and, of course, the undertaking at Mount Melleray is successful from the figures I have given of the clearing of forests.

40660. How long ago was that planting done?—I do not think it is more than twenty years ago; but the clearings I have spoken of were rather recent.

40661. That was the very first thinning?—Yes. It made about £35 an acre.

40662. I am astonished to see the amount those thinnings fetched?—I state that on the authority of one who has taken much interest in this subject at present, Mr. Dawson, of Dublin; and his predecessors in the same subject included Sir Robert Kane, author of "The Industrial Resources of Ireland," Professor Sullivan, of the Queen's College, Cork, and Dr. Lyons, of Dublin. And those people took such an interest in the re-afforestation question that the Government invited an expert from Denmark, Mr. Howitz, I believe, about twenty years ago, and his declaration was rather remarkable. He says the question of re-afforestation in Ireland was a most vital one for the country, and if the country were treated rightly in reclamation and other respects, we might have twenty-five millions instead of five millions.

40663. Sir FRANCIS MOWATT.—Capital?—Population. And with respect to the question of afforestation, I would like to say also that I have seen it stated on the authority of Professor Schlich, that there was no country in the world whose climate suited planting as well as that of Ireland, and it seems that he also stated that Ireland was the least planted or afforested country in the world at present.

40664. Mr. SUTHERLAND.—You surely do not know Great Britain if you say that. You are surely better tree'd here than in Great Britain?—I do not know very much of Great Britain; but I believe we are not as well tree'd.

40665. Most Rev. Dr. O'DONNELL.—The Secretary has just put into my hands one of the volumes already published by this Commission, and it contains a remarkable report of Professor Schlich on the subject of experiments in Ireland on re-afforestation*?—Yes; perhaps he included Mount Melleray.

40666. No; it is in the West of Ireland?—In some countries the Government take up the question of re-afforestation, as in France. There are obvious advantages when the Government take it up, but in some cases, where the property belongs to the municipal authority, the Government manage it, but at the same time the municipal authority get the profits, and in some cases the profits are so great that there are no rates, and it would be a very convenient thing if our mountains here were re-afforested in such a style that there would be no poor rates in the district of Scariff. I am sure that that would be one result that would be appreciated very much.

40667. Mr. SUTHERLAND.—That is, that the Government should do the work, and that the locality should have the benefit of it. Why should you call upon the Government if it was to be local property?

* See Appendix to the Third Report of the Commission [Cd. 3414], p. 293.

June 7, 1907.

Rev. J. Halpin.

—Because they have done it in foreign countries.

40668. But it is not a common thing on the Continent. The forests belong to the Communes?—But in some cases the Government do it. And I believe our Government, even in India, have done something of the kind.

40669. Most Rev. Dr. O'Donnell.—And in France is not there a Department of Forestry?—Yes. And I would ask the Government also, because I could satisfy them that it would be a very practical thing to do, to give employment and to bring about industrial wealth and success in the country, and it would not be at all necessary to lose financially, and they usually do not lose anything on any bargain they make with us. They should manage the thing, and I would like them to begin with a little margin; and they could secure themselves, and secure themselves very well.

40670. It is not a grant of public money you require?—Certainly not.

Mr. Patrick J. Hogan examined.

Mr. Patrick J. Hogan.

40671. Sir Francis Mowatt.—You represent the County Council?—Yes.

40672. You have prepared notes of evidence?—Yes, I have. They were only the headings of what I wish to speak on. Land purchase is the first subject, and one of the most important in the country, and then there is something about the state of land purchase and drainage and the want of transit facilities and congestion in the district.

40673. We will take them one at a time. Why should land purchase not be more extensive in Clare?—My answer to that is, because at the present time, and for the past four years in Clare, too high a price has been demanded for the land.

40674. I think we heard from the last witness that half the district familiar to him has changed hands?—That is only half in one parish. Beyond that, in Scariff Union, I do not know of more than two or three sales under the Act of 1903.

40675. Have there been attempted negotiations between tenants and landlords which have broken down then?—There have been. I can give you instances where negotiations have broken down. For instance, there was an estate on which I was a tenant myself, the Francis North Estate (Francis North was the owner of it), and nine years ago he carried out negotiations for the sale of that estate at fifteen years' purchase. There were two estates that ran parallel. This estate was purchased at fifteen years, which included the arrears on the estate, which amounted to a good deal.

40676. Fifteen years' purchase of judicial rents?—Of first term judicial rents, under the Ashbourne Act. That sale was subject to inspection on the part of the Land Commission, and the Land Commission sent down one of their inspectors, and on a portion of that estate he only recommended twelve years' purchase, which the landlord accepted. There is an estate running parallel to it that is equal to it in every way, for I know both thoroughly. The landlord of that estate offered to sell it four years after, or a couple of years previous to the Act of 1903, for eighteen years' purchase, but the tenants upon the estate refused to accept it when it was no better than the land on the other side, and they could not afford to pay more than the other tenants had paid for the land on the other side. The negotiations fell through, and after the Act of 1903 the landlord offered to sell for twenty-five years' purchase of the same term rents.

40677. For the same term rents?—The same term rents, first term rents, twenty-five years' purchase, and of course the negotiations fell through.

40678. What estate is that?—The Gardner estate.

40679. Is there a residence on that estate?—There is not. Sir Robert Gardner, of Dublin, is the landlord. Several other estates in Clare, too, are similar.

40680. Let us take one on which the negotiations have broken down?—Well, of estates in Clare there is the Fitzgerald estate. I will take the Fitzgerald estate.

40681. Is that the one that was mentioned this morning?—No, it is the estate of Lady Fitzgerald. Negotiations for sale were carried on and the landlord offered to sell at 23 years' purchase.

40682. That is since the Act of 1903?—Yes, since 1903, at 23 years' purchase of second term rents and a lesser number of years on first term. The tenants offered something like 21½ years on second term rents, and I believe it was 20 years' purchase that was offered on first term rents, and the landlord refused to carry out the sale and the tenants went into Court and got 1*s.* 6*d.* in the pound, on the average, more of a reduction than the landlord was getting them to purchase it. There were only a couple of second term tenants on the estate. I think it was one or two.

40683. And the reduction of rent made by the Court was 1*s.* 6*d.* below the annuity which they would have had to pay?—Yes, below what they would have had to pay.

40684. Perhaps we ought not to go on to other estates. That explains that part of the subject sufficiently. Now, as to the case of high prices?—The cause of high prices is because the land in Clare is let dearer than in any other county I know.

40685. What is the cause of that?—The causes may be two. I should say from my experience of the County Clare that one of the causes is short leases. I have gone over and valued estates in Clare, and I have found short leases. I must say the landlords are poorer than any other landlords I know of in the entire county, and when they bought one estate, after buying the estate they mortgaged the estate and bought another, and they would give short leases immediately afterwards and the rent was increased.

49686. Mr. Sutherland.—Are they mostly leaseholders?—They were leaseholders. They are judicial tenants now.

40687. Sir Francis Mowatt.—Are they giving short leases to tenants to-day?—Not to-day. I am speaking of the past thirty or forty years ago.

40688. Mr. Kavanagh.—They were before the Act of 1881?—Yes, but not since.

40689. Most Rev. Dr. O'Donnell.—To secure a high rent a short lease was given. Is that the statement?—Certainly, my lord. I have some particulars of an estate here that I know about. I take it as typical of many estates. The rent on that estate has been reduced, I am sure, at the present time from what it was formerly by 75 per cent., and still the rent is dear, because it is mountain land.

40690. When you speak of the cause of high prices, that would not affect the price at which an estate would sell to-day, but do you mean that that caused high rents?—That caused high rents.

40691. Mr. Sutherland.—Is it your opinion that when the reductions came to be made they were not made with reference to the real value of the land so much as with reference to the rent they had formerly paid?—I am positive that that is the fact. I have seen it over and over. I have seen two farms side by side the quality of the land being equal on both farms and there was 30 per cent. difference in the judicial rent. That was in the 'eighties, first term rents.

40692. Mr. Kavanagh.—How do they compare with the valuation?—In some cases they are under the valuation, but here the valuation is never taken as a criterion of the value of the land, because when the land of Clare was valued a lot of this was broken up and under tillage. If you go up to the mountain top at the present time you will observe the ridges where it was in wheat, and there is nothing now but heather and rushes; and that land was valued. The very worst class of land in Clare was in tillage at that time because the weather was fine and the seasons good, so that anything you would throw down in the soil came up that time.

40693. Sir Francis Mowatt.—Now, touching another point, the Land Courts?—I know another estate that is very much broken up in a part of this county where they were carrying on negotiations for a sale. They have got a far better reduction now than they would have got under the purchase, the estate is so much broken up. Take a farm of twelve acres. It may be in twenty-seven different holdings, and that is over, let us say, 2,000 acres of an estate.

40694. Do you instance that as showing it to be desirable to enter the Land Court rather than buy at

resent prices?—The reason I say that is because land n Clare was let higher than any other county I know f.

40695. Now, about arterial drainage?—I would pre-r to finish about land purchase if you please.

40696. Very well?—I would like to say a word or wo about the breaking up of grass farms, and migra-on from the mountains and from the congested hold-gs, and I have a table prepared here showing all the aluations in the union under £6. We have under 6 valuation in Scariff Union 1,246 holdings, and the otal number of holdings in the union is 7,060 or mething under, and the population is 10,445.

40697. And have you much grass land available?—am sure there are four or five farms available.

40698. And what is the acreage?—About 400 acres.

40699. Then there would be only 400 acres in the nion available for increasing those 1,246 holdings? Yes.

40700. Most Rev. Dr. O'Donnell.—It would come to his, that Scariff is scarcely one of the unions in which here is very much grass land available for migration r for enlargement of holdings?—Yes.

40701. But outside this union, in other parts of lare is there land?—Oh, yes, lots of land where eople are not so congested as in Scariff. And it is mpossible for these people to continue to exist as they o at present, and the marvel is that there is not ore emigration out of the place than there is at the resent time, because they are certainly not earning abourer's hire at the present time on those miserable arms, and unless they are continually delving into hem the land goes back into its original state of wild-ess and mountain.

40702. Can anything be done towards teaching the eople better methods of cultivation?—I think there as been a great deal done to teach them how to cul-ivate their land, and I think they are fairly well aught how to cultivate their land at the present time. eaching is of very little use to a man who must con-inually improve his farm to keep it from going back nto rushes; and a farm which is wet.

40703. Sir Francis Mowatt.—I think you told us hat formerly the holdings on the tops of the moun-ains were under tillage. The seasons were altogether ifferent. We had fine weather at that time, and at hat time you could sow crops out in December. Now ou cannot sow till April.

40704. Mr. Kavanagh.—But surely there was otato blight in those days?—Potato blight was not nown before 1879. There was no potato blight in his part.

40705. Most Rev. Dr. O'Donnell.—Before the Famine years—1845 or 1846?—1845 or 1846.

40706. Sir Francis Mowatt.—You say the potato isease was unknown before that practically?—Yes.

40707. Most Rev. Dr. O'Donnell.—You think the limate has deteriorated, that the cultivation of wheat n a scale that was possible before would not be pos-ible now?—It would not be possible. There is too nuch moisture and too much cold.

40708. Do you look to re-afforestation such as was lescribed by the preceding witness as one expedient for improving the climate?—Oh, yes; that and drain-ge.

40709. What kind of drainage—is it arterial drain-age?—Yes, arterial. I think in Scariff we had a ommission appointed, a Viceregal Commission, in 846, to inquire into the drainage of this district, and all we have is a Government Report on it. That Re-port has been made, and they recommended a sum of about £40,000 to be expended on the drainage of Scariff River and its tributaries, and the valuation would cover something like 5,400 acres. Several at-tempts were made afterwards to carry out that drain-age, and the owners of the land opposed. The occu-piers, a portion of them, were for it, but they thought, after having gone into the several schemes, that it would be impossible to drain the river without getting a free grant from the Government, and that commer-cially considering the acreage and the amount the oc-cupiers were prepared to pay, there would not be a margin, and they asked the State on several occasions to make a free grant to do the work.

40710. Sir Francis Mowatt.—Commercially it was not worth while doing it?—I am not sure about that at all, but on the sides of the river you have a rock and you must expend a great deal of money to blow up this rock. It is a limestone rock, and the whole land is now one sheet of water, and it is deplorable to see not only the beasts dying from that tubercular disease, but the people along this river dying with consumption, because there are houses upon houses there and families, and you will see one or two of them laid up with fogs and mists arising out of the river and the lake; and I see it would be in the in-terest of the nation to drain it.

40711. I agree with you absolutely, but I under-stood you to state that it was found that as a com-mercial speculation it would not be successful, and therefore that you thought that the Government should come in on account of national considerations. I am not in the least denying your point?—Yes.

40712. Most Rev. Dr. O'Donnell.—Are you aware that with reference to that class of drainage, the Com-mission which has just issued its report has recom-mended, much on the same lines as the Commission to which you have referred, that the amount which should be charged to the occupier should correspond with the direct advantage which he receives from the drainage?—I am not aware of that, but I may say that I gave evidence before the Commission, and that that was the very suggestion I made at that time. There is another drainage needed, which is in Tulla and Kiltannin, a drainage of 300 acres that could be reclaimed for 4*s.* an acre, but nothing has been done, and along the whole river beautiful land that could be reclaimed at a very small cost; but nothing has been done.

40713. Sir Francis Mowatt.—That would be rather a case for local authority?—But there is no local authority which could at the present time work it till, I think, the law is amended.

40714. Mr. Sutherland.—To whom does this land belong?—It belongs to different occupiers.

40715. But it is their interest to improve their own property?—But there is no local authority.

40716. What did the owner do in the past when this land was gone derelict in this way?—He was a minor then and there was nobody to look after the estate except a receiver, and then he joined the army, and now he is back again, and he has a smaller estate, and the tenants have not only to bank up the land, but they have to face the difficulty of draining it off their own bat unless something is done.

40717. It appears to me to be an opportunity for getting an additional fourteen acres of drained land?—But they would not get assistance even from the landlord, where it is going through his own land, to do it. And then with regard to transit, in this part of Clare we are worse off than any people in Ireland. We have something like fifty miles to travel from this union to Ennis without a mile of railway. Some time ago Mr. Gerald Balfour offered £66,500 to the Grand Jury of Clare to build a line of light railway through East Clare, but the Grand Jury could not see their way to accept the money, and they considered that the tax on the rates would be so great that they would not be justified in ac-cepting the offer except he gave a free grant of the whole amount or three-fourths of it.

40718. Most Rev. Dr. O'Donnell.—That was be-fore the Local Government Act?—That was before the Local Government Act came into operation. And there were several attempts to do something by dis-trict schemes, but nothing has been done; and if you have an article for sale, except cattle that can walk, you will be tired bringing it to a railway station. And people are trying to encourage tillage and every-thing else in the country, but if you have mangels or turnips for sale, and if you bring in four tons to our local market here you will cause a glut in the market, and you cannot get near a good market.

40719. Sir Francis Mowatt.—Are those mangels grown in this district?—Yes.

40720. Do they do well?—They do well in this part of the district.

40721. Most Rev. Dr. O'Donnell.—That is the second £60,000, after the lapse of many years, re-commended for expenditure in this district, and yet not expended?—It is not expended, my lord, and it was held over year after year, and they could not take it. We are paying already 2*d.* in the pound as a guarantee to the West and South Clare Rail-ways.

40722. Mr. Sutherland.—And what was the line of this proposed light railway?—It was proposed to run from Ennis to Scariff.

40723. Through Tulla?—To Tulla and by town-lands adjoining.

June 7, 1907.

Mr. Patrick J. Hogan.

40724. Sir FRANCIS MOWATT.—What was the estimated cost?—It would cost nearly double the amount. I think a broad line would be far better if we had another line of railway. And then we were very hopeful that we would get a motor service in Clare.

40725. Mr. SUTHERLAND.—On the same line?—No, but a line of Lord Pirrie's and another's.

40726. But by the same route?—Yes, by the same route, but our hopes were again dashed.

Mr. KAVANAGH.—There was a condition as to keeping the roads in repair, and where the roads were not kept in repair they would not give the motor service.

40728. Most Rev. Dr. O'DONNELL.—Did you know that scheme was the Pirrie-Iveagh scheme?—No.

40729. What was the proposed terminus of the line from Scariff to Ennis?—Scariff was the terminus.

40730. Was it not to go on north to Mountshannon?—To Scariff.

40731. Mr. KAVANAGH.—Are you on the County Committee of this county—Clare?—Yes.

40732. Have you any agricultural scheme in this county?—We have, sir.

40733. What benefit do you think the surrounding district gets from this scheme?—Firstly, we have got a good deal of lectures. The various lecturers who have come to the county have done a good deal of good. And also what has done a good deal of good in various districts is the cottage prizes and farm prizes, giving encouragement to the various farmers throughout the district to improve their holdings and do it in the best possible manner.

40734. Have you an agricultural instructor?—Yes.

40735. A suitable man?—Yes.

40736. And has he any experimental plots?—He has; but I must say that I see plots at the present time with various farmers round here equally good with the experimental plots, only that they are better managed. And also with respect to a great deal of the lecturing in this county, we expect that after a time we can dispense with the service of the lecturers in such matters as poultry, and butter-making also.

40737. But up to the present time you think that there has been a certain advantage?—Oh, certainly, there has been a great advantage.

40738. Does the advantage come to the smaller farmer as well as to the larger farmer?—It comes to the smaller farmer, but the advantage would be far greater were it not for the want of transit, because if he has an article prepared for the market he cannot find an outlet.

40739. The smaller farmer?—He has butter and eggs and things like that that he must sell locally at far less prices than if he had railway facilities.

40740. Do you do any spraying in this part of the county?—I think this is one of the first counties that used spraying. They sprayed here fifteen years ago.

40741. That was not the teaching of the Agriculture Department?—No; before the Agriculture Department was commenced at all they were spraying here. I think it was owing to a clergyman we had here—Father Clancy. I think he was the first in Clare that sprayed, and that was fifteen years ago; and now in all parts they spray two or three times a year, and I think there is no place in Clare where they spray so much as in this part of the union.

40742. And on the whole you are satisfied with the work of the County Committee. They do good in this locality?—Certainly, an amount of good.

40743. Sir FRANCIS MOWATT.—Tell us how the scheme is arranged between yourselves and the Depart. Must the scheme originate with the Department or originate with you, and then be discussed by them before they consent to give their share of the money?—I think what Mr. Birrell said would be applicable, that the County Committee advise and the Department does as it likes. I was for years a member of the Board of Agriculture myself, and I know a good deal of the working of it, and nothing could hit off the situation better than what he said—the Council advises and the Board recommends, but the Department does what it likes.

40744. And when you were in the Department you did what you liked?—I was not in the Department at all, but I was on the Board. The Department did what it liked.

40745. Most Rev. Dr. O'DONNELL.—Your answer to Sir Francis seems to indicate that in your opinion it is the Department that fixes the agricultural schemes?—You may alter minor details, but that is all.

40746. Do you think it right that the County Committee should have more initiative and more power?—Oh, certainly. They know what is suitable to the various districts and the different parts of the country better than any Department or any inspector.

40747. Was it your experience that an officer of the Department would come down and say, "The Department will not have so-and-so"?—Yes, and that the scheme would fall to the ground unless so-and-so was done.

40748. Sir FRANCIS MOWATT.—On the other hand, the county is not bound to subscribe unless it acts in agreement with the Department?—Certainly not; but in this way the county is bound to subscribe, because there are certain schemes which had been partly carried on for a year preceding, and if that part of the scheme fell through it would be a great injustice to certain people who would suffer an injustice. For instance, suppose there may be people who may have got horses for sires, and bulls, through the county, and they will get a premium for two or three years for these. Well, if the scheme does not suit, and the Department's inspector tells the County Committee, "We cannot have that particular part of your scheme," the County Committee can say "We will let the scheme fall through"; but still they consider that they cannot do that without doing injustice to a certain number of people who got certain animals on the faith of the scheme living for the following year or the year after. So we would have to accept the scheme.

40749. Mr. KAVANAGH.—But we can drop that part of the scheme without dropping the whole scheme?—We can drop that part of the scheme, but that would be the greater part of the scheme, and that would be the very part of the scheme that we wanted to hold on to.

40750. For instance, if the Department objected to the poultry scheme you could drop the poultry scheme altogether and carry on the rest of the scheme?—Certainly.

40751. I think it does not bind you to the whole scheme?—I am aware of that, and we did disagree about that, and the Department paid for the poultry instructors themselves.

40752. Most Rev. Dr. O'DONNELL.—Would not you think it a pity that the Department should interfere in a way that practically compels your abandonment of a portion of your scheme?—Yes; I fancy that would be an injustice to the county.

40753. If the scheme were altogether dropped you would lose the rate in aid?—Yes.

40754. Mr. SUTHERLAND.—And you would also break your faith with those other people?—Yes.

40755. Most Rev. Dr. O'DONNELL.—At the same time would you allow that some central body like the Department of Agriculture should have some control?—Certainly.

40756. Mr. KAVANAGH.—It must have some control when it is contributing a little more than half?—Yes. There is a portion of Scariff Union, the electoral divisions of Iniscaltra North and South Dromin and Mountshannon, which are under the Congested Districts Board and have never got any aid from it in any way.

40757. Sir FRANCIS MOWATT.—Have you made any application?—I understand that they have brought their requirements before the officials of the Board.

40758. With what result?—Nothing. These places were transferred to the County Clare for administrative purposes under the Local Government Act, but they were scheduled while they were part of the County Galway, and they continued so when they were transferred to the County Clare.

40759. Most Rev. Dr. O'DONNELL.—There is no reason in the world why they should not receive special treatment under the Congested Districts Board, but you would not be surprised to hear that there are several electoral divisions scheduled that receive no special treatment?—I would regret to hear that.

40760. Do you think has the case of these electoral divisions been brought before the Board itself?—I understand it was brought before the officials of the Board. I hope now that I have called you lordship's attention to their case they will get what they are a long time standing in need of: that is some consideration at the hands of the Board.

Mr. WILLIAM O'CONNOR examined.

June 7, 1907.

Mr. William O'Connor.

40761. Sir FRANCIS MOWATT.—You reside at Feakle nd come to represent the Scariff Rural District Coun- l?—Yes. I am Chairman of the Scariff Rural Dis- ict Council.

40762. Do you yourself farm?—Yes, on an ordinary nall farm of about 30 acres. I find that there are om 900 to 1,000 small holdings in the union valued £10 and under.

40763. You state that as establishing the existence congestion?—Yes.

40764. Do you know what is the total number of oldings in the whole union?—I would consider that ere are less than 2,000.

40765. Mr. SUTHERLAND.—We have it here—it is out 1,529?—That is about correct.

40766. Most Rev. Dr. O'DONNELL.—What figure ere you taking for a small holding?—I was taking nything under £10.

40767. Sir FRANCIS MOWATT.—You state that the umber of small holdings in the union in comparison the total number of holdings is sufficient in your pinion to establish the existence of congestion in the strict?—Yes.

40768. Your next point is the grazing farms?—I ook the agreage and valuation of some of the grazing arms. They are principally in the hands of the land- rds.

40769. They are in the district of which you are peaking now?—Yes.

40770. You need not go into the details of each; o you know at all the acreage of grazing land which available in the district?—About 1,200 acres. Some f that is mountain. There is a property of 1,084 cres near Killaloe with a valuation of £233 10s. I hink there must be a good deal of that mountain.

40771. It does not follow because it is a mountain hat it is wholly valueless for feeding?—According to he amount of the valuation it would not be all arable nd. General Gore has 129 acres, all arable land; he valuation is £100 10s. Colonel O'Callaghan has 14 acres of good arable land, with £92 10s. valua- on. Valuation is the best guide in this part of the ountry as to land.

40772. I am afraid we have heard in evidence this orning that it is no guide at all?—I take it as a uide. I don't find any better standard than valua- on.

40773. Most Rev. Dr. O'DONNELL.—As compared ith acreage?—Yes.

40774. In dealing with untenanted land it is neces- arily a guide?—Yes; but I have experience of this ery land.

40775. You appreciate the point of our Chairman: ith reference to the rent it is no guide?—No; it is nly in reference to acreage. The acreage in itself is o guide. The valuation might be only a penny an cre, in which case you might have 1,000 acres, and he valuation might not be £50.

40776. Sir FRANCIS MOWATT.—I don't think we need o through the different holdings. You have given us he amount of grass land which you think would be vailable. The point of your evidence is that in your pinion these grass lands should be acquired, one way r another, from the present holders, and should be llotted to the small farmers to increase their hold- ngs?—Yes. Then in reference to drainage, I wish to ay a few words. The river leading up from here in he direction of Tulla is doing great damage.

40777. When the floods are on?—Yes. In fact to- lay I saw a lot of lands flooded.

40778. Most Rev. Dr. O'DONNELL.—Is the land sold rom the landlord to the tenant?—Portion of it is.

40779. Take an estate along the river on which sales ave not yet occurred. Assume for the moment that enants and landlord agree about price. Would you onsider that it would be a good thing for the tenant s he becomes a peasant proprietor to have an addi- tion to his instalment put upon him to correspond with the advantage that he would gain from a large drainage scheme such as you propose?—It would not.

40780. Suppose this drainage takes place, and a farmer along the river is considerably improved, would it be fair to put some part of the drainage ex- penditure on the farmer to correspond with the ad- vantage he got from the drainage?—I don't quite understand.

40781. Mr. SUTHERLAND.—That a loan would be made for the purpose of drainage, and instalments to cover interest on the loan and sinking fund similar to the annuity for the purchase of the land would be added to that annuity?—They would not be able to bear it in the case of a great many of the small farmers. They might bear a small part of it, but not the whole of it.

40782. Most Rev. Dr. O'DONNELL.—Would not the value of the land be greatly improved?—It would.

40783. Would not he be better able to pay the instalments plus a little for drainage, if the drainage were done, than to pay the original instalments without any drainage?—Yes. The whole countryside is destroyed by this river.

40784. Mr. KAVANAGH.—How many miles of this river would you have to drain?—When you go a couple of miles above Scariff it goes away in the direction of Lough Graney.

40785. Mr. SUTHERLAND.—What would be the nature of the work to be done?—Sinking the river. For about a mile above the town it is all a rock. As it comes down here there is a waterfall. You can stand on the bridge and look up.

40786. Mr. KAVANAGH.—You would want to cut the rock?—Yes. It is the rock that is keeping back the water. Then also the river should be cleaned up thoroughly.

40787. If that rock were cut would the river run properly then?—It would have a good fall, but the river should be cleaned all along back until it meets the high land. It all runs off the mountains.

40788. Most Rev. Dr. O'DONNELL.—The rock is the chief obstacle, but not the only one?—Yes.

40789. Mr. SUTHERLAND.—It is all here in this neighbourhood?—Yes, for about a mile or two.

40790. Is the rock very long?—No, but there are portions of it deep. The rock extends up for about half-a-mile continuously; then it gets pretty deep, and then you meet the rock again.

40791. Sir FRANCIS MOWATT.—Your next point is local industries?—We have no local industries here of any description, with the exception of a little milling, flour, and meal, done in Killaloe.

40792. Most Rev. Dr. O'DONNELL.—You mean industry for men?—Yes, to give employment.

40793. Is there wool in the district?—Yes, wool is exported from the quay down here, and sent away.

40794. Has it occurred to the people in the locality that the woollen industry could be started?—The wool is brought here into the market and also in Feakle, and sent away to England.

40795. Is there water power available?—Yes; the finest in the world.

40796. Sir FRANCIS MOWATT.—Is that one of the industries that you suggest?—I would say that a woollen factory is desirable in the district.

40797. At all events, you think that inquiries should be made to ascertain whether it is possible to start a woollen industry in this district which might be self-supporting?—Yes.

40798. Most Rev. Dr. O'DONNELL.—You would agree with the suggestion of the Chairman, that before anything is done it would be well to have a practical expert go into the question, and inform the people as to his opinion of the possibilities of the industry?—Yes.

40799. Sir FRANCIS MOWATT.—That would be the plan to be adopted before starting an industry. It would be useless to start an industry merely on the ground that under altogether different circumstances it paid. The question is whether it could be made to pay. The first thing to do is to make adequate inquiry to see with regard to an industry whether that would be possible?—Of course there is no use in starting an industry that would not be likely to pay.

40800. Your next point is the construction of a railway; that is the same railway that we have heard the scheme put forward about?—Yes; we are very backward for want of some mode of conveyance for goods and other traffic. There is conveyance by water in here to Scariff from Killaloe, Limerick, and Dublin, but it is so dear that you can only convey provisions. You cannot convey any kind of produce by it.

40801. Mr. SUTHERLAND.—What sort of communication is there between here and Killaloe?—By boats.

40802. Is there a packet sailing regularly?—There is no regular sailing. In fact there could not be a

June 7, 1907.

Mr. William O'Connor.

regular sailing for there are some defects down below the town, and in Killaloe any great rise of water or flood stops them, and they have to be often a week there before they come up here to Scariff. In my experience there is often a delay of a week before they can get goods from Killaloe or Limerick into Scariff. There is a canal from Killaloe to Limerick connecting it with the Dublin canal.

40803. Sir FRANCIS MOWATT.—Is there great delay in sending barges along these canals?—Yes; in fact butter and other things cannot be sent by boat because of the delays, and they are sent by car to Limerick. A great deal of fresh butter is bought every week in Feakle, but it must be sent by car to Limerick. There are tons of it. If it was sent by boat from here it might be three days before it arrived, by which time it would be bad.

40804. Are there any creameries in the vicinity here?—No; we have no creameries in the Scariff rural district.

40805. Mr. KAVANAGH.—It is not a dairying county?—It is. Every holder keeps cows.

40806. It has never been suggested to you to start creameries?—There were suggestions to start creameries on a few occasions at Feakle and Bodyke, but they fell through.

40807. Sir FRANCIS MOWATT.—Did they fall through on the ground of objection to the system of creameries or to their not seeing their way to make it pay?—They said it would not pay, I should think.

Mr. HOGAN.—The proprietary creamery owners refused to come to this part of the country. They could not get their butter and cream away. There were local efforts made to establish creameries, but they found that they could not get the butter in a satisfactory condition to market because of the conditions of transit.

Witness.—Everything attempted here is hampered for want of a mode of transit.

40808. Sir FRANCIS MOWATT.—What is your next point?—I know two or three townlands very convenient to me which are quite congested. There are fifteen families there living on a valuation of £70, and unfortunately the poorer they are the larger the families.

40809. Mr. SUTHERLAND.—You think that it would be an improvement if means were found to get them taken within the congested area to which the action of the Congested Districts Board applies?—Yes; it applies to several townlands that I know of, and in these townlands that I mention, they may hold the land in nine or ten different places.

40810. Most Rev. Dr. O'DONNELL.—The land is in rundale?—Yes. The tenants hold in common. I know one case in which seven people hold eight acres of meadow land in common. Four of them have one-half one year, while the other three have the remaining four acres. The next year they change this about.

Mr. MICHAEL COLLINS examined.

Mr. Michael Collins.

40811. Sir FRANCIS MOWATT.—You reside at O'Callaghan's Mills, and represent the Board of Guardians of Tulla?—Yes.

40812. Are you a farmer?—Yes. I hold between sixty and seventy acres; some in Scariff Union and some in Tulla; six miles apart. I have fifty-five acres in Tulla, with a valuation of £30. I got an abatement, but I am not satisfied with it, and I will look for more.

40813. When did you settle?—About four years ago. The valuation of the whole union is £33,555; the population is 9,834. There are ninety-one outdoor relief cases in the union, comprising 111 persons, at an average cost of £10 weekly through the year. There are a lot of small holdings in the lower end of the Tulla Union, but in Broadford, in the south-east of the union, at Killurin, which has a lot of mountain attached to it, I have known six of them to be on a £5 valuation, sharing this land between them.

40814. Do you mean to say that there were six persons on one holding?—Yes, on the one holding, each with their own "divide."

40815. Most Rev. Dr. O'DONNELL.—Had each of the families a share of the valuation by itself?—Yes. Every man has his own little divide of the land, but there is a joint valuation of the whole.

40816. Each has his own little tenancy in it?—Yes.

40817. Sir FRANCIS MOWATT.—Is that going on to-day?—Yes, up to the present. The whole valuation is £5, but they don't hold in common. Each has his own share.

40818. Separately?—Yes. There is a large tract of mountain overhead on the Killurin mountain which would be very useful to these poor people if they could get share of it.

41819. Could you at all say what rent they are paying?—I cannot say.

40820. They cannot be living off that land; are they really labourers? Do they work for other people?—Yes, they do. That is their way of living.

40821. They are labourers and have this little plot of land?—Yes.

40822. Mr. SUTHERLAND.—They are judicial tenants all the same?—They never went into court, as far as I know.

40823. Could they if they wanted to?—Yes.

40824. Sir FRANCIS MOWATT.—They are a little different from what I understand as the men legitimately described as small holders. They are labourers having small plots of ground to eke out their wages?—Yes.

40825. Is the point of the statistics with which you have supplied us that this district should be treated as a congested district?—That is my point.

40826. You are speaking now for the whole of Tulla, or for the particular part from which you come?—For the eastern part.

40827. Most Rev. Dr. O'DONNELL.—Is there much land in Tulla Uunion for the enlargement of holdings?—Yes; very large farms.

40828. Are they held by the landlords themselves or by grazing tenants?—Partly by the landlord and partly by grazing tenants.

40829. Sir FRANCIS MOWATT.—I see there are twelve holders above £300, twenty-three above £100, seventy-seven above £50. Are these very large holdings grass holdings?—Yes.

40830. Are they in the occupation of the owner himself?—Partly. There are a few parts let for grazing. The rest is in the hands of the owners.

40831. Are the owners resident upon them as a rule?—Yes. One owner sold his place a few days ago. That is Mr. Phelps.

40832. Was that a large holding?—Not large in that union. These small holders about him were in the habit of getting bog from him. Now that he has sold to his tenants, he believes that they will keep all this bog. What the other holders will do, I don't know. There is another large bog up on the mountain, but it is very hard to get there.

40833. Was it only to his own tenants that Mr. Phelps used to let the bog?—To all the people in the neighbourhood.

40834. Why will not the tenants do the same?—The tenants will get it all with their holdings.

40835. But beyond what they use themselves they will sell?—Probably they won't. The bog is little enough for every tenant to get a share of it according to his holding. Those people will be deprived of the bog then.

40836. Most Rev. O'DONNELL.—Were these people on a different estate?—Yes.

40837. They used to get turbary on this estate?—Yes.

40838. Now that the holdings are sold to the tenants on this estate, they are not sure whether they will get it?—Yes.

40839. At all events they are dependent on the new proprietors?—They won't get it from the new proprietors, to my mind.

40840. Sir FRANCIS MOWATT.—Why not?—Because they think it is little enough for themselves for years to come; but there is another large bog up in the mountains. I cannot say who owns it.

40841. Most Rev. Dr. O'DONNELL.—Do you think should the department having charge of sales from landlord to tenant be charged with the duty of taking a large survey of the turbary question in each locality and making the most of the bog in the locality before the land is sold to the tenants?—Before it was sold

to the tenants it was sold to outsiders, every man taking yearly a certain amount and paying for it; now that the estate is sold there will be no more of that.

40842. Sir FRANCIS MOWATT.—You say that the tenant won't sell turf to these other people because they have no more than is necessary for themselves?—That is the very reason.

40843. Then taking the whole union there is no harm done, because if they sold the turf there would be none left for themselves, so that they would be in the position of not getting any advantage from the sale?—Yes.

40844. Most Rev. Dr. O'DONNELL.—The peasant proprietors should naturally be provided with turbary that would be sufficient for them for many years ahead?—Yes.

40845. Suppose there was a tract of bog such as you have alluded to at a distance, don't you think in a sale from landlord to tenant the Land Commission should endeavour to get hold of that bog and not allow it to pass into the hands of any private individual?—As a rule they divide it among the tenants. I have seen on several occasions an attempt made by one farmer on an estate to get the whole bog, but it was not allowed. It was divided in squares to every tenant.

40846. Mr. KAVANAGH.—The tenants would think it a great hardship if the landlord sold the bog away from them?—It would never do.

40847. Sir FRANCIS MOWATT.—Your point really is that what you have been saying would justify the treatment of this particular district on the same principle as is now applied by the Congested Districts Board to land under them: that is really what you want to tell us?—Yes. This bog that I refer to which these people would require is on the top of a mountain, and there is no access to it at all. It is very easy making some sort of a by-road to it; but how these people are to get turf in future I don't know unless they go up there.

Mr. TIMOTHY DELAHUNTY examined.

40848. Sir FRANCIS MOWATT.—Are you a farmer?—Yes. I am a small farmer having about nine acres of land, and reside at Kilbarron, Feakle, in the union of Scariff. I wish to speak of congestion. There are 428 acres on this Kilbarron property. There are fourteen tenants on it, and the valuation of the fourteen tenants is £98 10s., and the grass land attached to it is £98 8s.

40849. Attached to the fourteen holdings?—No, but the grass land on the property.

40850. There is grass land adjoining valued at £98 8s.?—Yes.

40851. Who is holding that?—A grazier, a Mrs. M'Donough, of Feakle.

40852. Does she graze her own beasts or let it for grazing?—She grazes her own beasts on it. In the electoral division of Coolrea, townland of Kilbarron, some of the fourteen tenants have from five to ten acres, and in some cases a man with five acres has thirteen divisions on it.

40853. Is that in rundale?—Yes, and there are seven parties joined in one meadow of eight acres, and the part they will have this year they won't have that part next year.

40854. That is the case we have just heard about?—Yes. Each of these tenants has not a decent acre together. They have only patches here and there. That much grass land is outside, and there were negotiations with the landlord some time ago to sell and he referred us to the agent. We asked the agent to sell through the Estates Commissioners, and he said he would not sell through any third party, and he asked twenty-four years' purchase for that kind of land.

40855. Mr. SUTHERLAND.—For the rundale?—Yes.

40856. Most Rev. Dr. O'DONNELL.—For the land occupied by the tenants?—Yes.

40857. Your point in suggesting a sale through the Estates Commissioners was that they might rearrange and enlarge the holdings by additions from this meadow land?—Exactly.

40858. Sir FRANCIS MOWATT.—You say that these fourteen holders would be willing to accept the authority of the Estates Commissioners if they, for instance, were to buy the grazing land and stripe it and give one-fourteenth to each tenant?—Certainly.

40859. They would accept the decision of the Estates Commissioners as to the division?—Yes.

40860. Mr. KAVANAGH.—Have any of these rundale tenants been into court?—Yes.

40861. How does the Sub-Commission fix rents in a case such as you describe to us?—I don't really know, because I was not in the place when they went there, but I believe they got little or nothing.

40862. How does it fix a rent on a holding that moves its place every year?—I cannot tell you how they fix that.

40863. Is rundale very largely the custom in this country?—I don't know.

Sir FRANCIS MOWATT (*to Mr. Hogan*).—Will you explain to us the system on which a judicial rent can be fixed on holdings such as have been described?

Mr. Hogan.—In my experience of Clare I have met no rundale estates. It is all in patches divided up, but the patches have bounds around them: except there may be half an acre belonging to each man in one field and there is something like a boundary mark to distinguish it, and the Commissioner scales the different pieces off the map and adds them together to make the holding.

Sir FRANCIS MOWATT.—In this case, where seven families have eight acres of rundale, and they have to divide a piece of meadow so that four of them have it one year and three the next, would it be possible to fix a rent, or do you know any system by which it could be fixed?

Mr. Hogan.—I never met that in the County Clare.

Most Rev. Dr. O'DONNELL.—How is a farm valued when it is in patches?

Mr. Hogan.—They put it all together.

Mr. SUTHERLAND.—There would be no greater difficulty than in common grazing?

Mr. Hogan.—Yes.

Mr. KAVANAGH.—There must be a map in fixing a judicial rent. Can they do that with common grazing?

Mr. Hogan.—Yes. I have known that to exist in Clare. There may be ten or twelve different places.

40869. Sir FRANCIS MOWATT.—What you want to submit to the Commission is that the grass lands to which you have referred should in some way or other be added to the fourteen holders?—(*Witness.*)—Yes, and to put it together in a way that it would be some use to somebody. It is no use to anybody as it is, and in fact when you are crossing and recrossing you cannot keep up bounds, if you are ever so well inclined. You cannot do it.

Mr. JOHN MALONE examined.

40870. Sir FRANCIS MOWATT.—Are you a farmer?—No. I reside at Bodyke. I am only giving some evidence with reference to the stock that would be suitable for the district in which I live.

40871. Are you a dealer in stock?—I was a while cattle-dealing, and I was a good while in Scotland as an assistant salesman.

40872. You had an opportunity of studying breeds of cattle first in Scotland?—Yes.

40873. In what districts of Scotland?—Through Argyllshire, Perthshire, Lanarkshire, and Forfarshire. I was assistant salesmaster, and then for awhile I was dealing for myself between this country and Scotland.

40874. How many years have you been in this county?—About fifteen years.

40875. Mr. SUTHERLAND.—Are you a native of this country?—Yes.

40876. Sir FRANCIS MOWATT.—You want to say something as to the particular sort of stock that would be suitable to this part of the country?—Yes, particularly the mountainous part of the country. I consider the West Highland cattle the most suitable cattle.

June 7, 1907.

Mr. John Malone.

40877. Mr. SUTHERLAND.—You mean the long horned cattle?—Yes.

40878. Do they sell so well as the Irish cattle?—They did not get a chance in Ireland. They were not allowed into Ireland. I chanced to bring in forty. After that the country was closed against them. The Veterinary Department would not allow them across.

40879. Sir FRANCIS MOWATT.—Why would not they allow them across?—They feared that they would bring in disease. They allow it now, but they would not allow it at that period. The ones I brought across did remarkably well.

40880. Mr. SUTHERLAND.—Is not the market for that class of cattle rather limited?—Partly, but all the highlands, the Grampians, and all round Stirling and Perth, they are easily sold.

40881. Do you know that it is more for ornamental purposes than anything else they are sold?—In some cases it is, but generally I would say, as far as my experience goes, that it is not.

40882. High prices have been paid for very picturesque-looking Highland cattle for the purpose of putting in parks like deer?—In some cases.

40883. Would they be suitable for giving milk?—No; they are poor.

40884. But very hardy?—Very hardy.

40885. They would not require to be put in all the year?—Yes. They can do on the mountains without any feeding except the grass.

40886. What would you get for each of these Highland cattle when selling them?—You can put them as high a price as any if you get them fat.

40887. That is not a real commercial price?—Fat.

40888. They are bought entirely for their appearance?—No; they are bought for fattening.

40889. I have seen a Highland bull sold for as much as £68?—According to what they are worth—up to £30 if fat.

40890. In your opinion they would be a very good breed to import into Ireland?—Certainly.

40891. For what reasons?—They are easily kept. Mountain men can keep them without any hay, and they thrive better in this country.

40892. Are you certain when you came to sell them you would always get a good market?—I brought forty to this country. I sold five to a man from Newmarket-on-Fergus. He kept them for fifteen months and got a very high price. He gave me £3 10*s.* apiece, and he got £13 15*s.* apiece after eighteen months' feeding. Another thirty-five I sold to Mr. Geoghegan, a large grazier in Galway. He was so anxious for more of them that he said he would feed no other cattle. The ports were closed up against them for no reason. There was no disease in Scotland at the time.

40893. There were complaints in England and other places at the time that the ports were closed unnecessarily, but the authorities thought that there was some reason for it?—I would not say that. I thought it was a rather harsh thing to do.

40894. You think then that these cattle might be brought with advantage to this country?—They would come in thousands to this country at that time.

40895. Sir FRANCIS MOWATT.—We are talking of to-day?—If they were in at that time we would have plenty to-day.

40896. They are not kept out now?—During the last two years a small number have been brought in. You have to go through certain conditions, get a veterinary opinion, and make a statement that they have not mixed with foreign cattle, and so on.

40897. Mr. SUTHERLAND.—Have you ever made any representations to the Board of Agriculture as to the importation of some Highland bulls to see if you could get them in?—I did not.

40898. Do you think they would be opposed to it?—I don't think they would. If they know the value of it they must do it.

40899. Sir FRANCIS MOWATT.—But is only as bulls and a few cows for breeding that you would bring them in?—To put them on the mountains.

40900. Because if you brought them in large numbers they would compete with your own beasts here; it is only for breeding purposes?—Yes.

40901. Mr. SUTHERLAND.—It is a fact that they live where other cattle would not live?—Yes. Mountain men cannot feed even Kerry cows without giving them hay. The Highland cattle require nothing special except when the snow is on the ground, when they have to get a couple of pounds of cake.

40902. Mr. KAVANAGH.—How long have you been cattle dealing?—Close on thirty years I have been mixed up with the cattle business.

40903. How does the price of store cattle now compare with the price thirty years ago?—It varies sometimes. This year it is not so bad. It was worse this time twelve months.

40904. Take the price of cattle now and thirty years ago?—There is a great difference corresponding with the price of beef then and the price of beef now.

40905. Are the stores much cheaper now than they were thirty years ago?—Yes. They would come in line with the price of beef.

40906. Is beef cheaper to-day that it was thirty years ago?—Indeed it is. I remember it went at £4 10*s.* a cwt. in Scotland at the time.

40907. Not according to the statistics?—I saw it. I saw the cattle bred. You can find it in the papers.

40908. Mr. KAVANAGH.—I am referring to a paper that Mr. Bailey, the Estates Commissioner, put in evidence before this Commission, according to which if you compare the prices in 1852—that is the year that the valuation of Ireland was made—and an average between 1901 and 1905, there has been a large increase in the price of beef.*

40909. Sir FRANCIS MOWATT.—Since 1905 it has further increased?—It is the best prices now they have got down.

40910. Mr. KAVANAGH.—He also says that cattle as compared with cereals were much more valuable in 1905 than in 1852?—I would not agree with that.

40911. Most Rev. Dr. O'DONNELL.—Your memory does not go back to 1852?—Not at all; to about 1876 or so. We did not know in these days of American beef, but now we have plenty of live cattle coming from America.

40912. Sir FRANCIS MOWATT.—Speaking as a purchaser of beef, I am afraid that I have to pay more to-day than I had to pay thirty years ago?—That may happen, too.

40413. Mr. KAVANAGH.—Are stores not considered rather high now?—They are a little dear, particularly conditioned cows.

40914. We had evidence that prices have almost fallen by half in the last thirty years; would you agree with that?—They are cheaper now.

40915. As much as half?—I would not say that.

40916. Most Rev. Dr. O'DONNELL.—Is it your evidence to the Commission that such cattle as would be sold in the County Clare are cheaper now than they were thirty years ago?—Yes.

40917. Sir FRANCIS MOWATT.—Did you know the County Clare thirty years ago?—Yes.

40918. Mr. KAVANAGH.—How much cheaper are the cattle now?—About £2 10*s.* or £3 apiece in some cases; well-bred yearlings I remember very dear; that is the tip-top class.

40919. Do good cattle hold their price now the same as then?—Certainly not. There is £3 difference in high-bred cattle and in heifers as against thirty years ago.

40920. Mr. SUTHERLAND.—Did your experience in Scotland lead you to inquire into the method of fattening cattle there?—Yes; I had a great deal to do among farmers.

40921. You know the method followed there?—Yes.

40922. It is a little different from what they do in Ireland?—It is entirely different. They feed entirely in in Scotland.

40923. That is not done to any extent in Ireland?—It is not.

40924. Do the stall-fed cattle in Scotland fetch higher prices than cattle from other places?—Yes.

40925. How much per head?—Reckoning by the cwt. it might be a half sovereign a cwt. That is for what they call top beef.

40926. Why don't they do something like that in Ireland to get that high price?—I suppose that they don't know.

40927. It involves a good deal of trouble and labour attending on cattle?—Yes, and also tillage. They till a lot in Scotland; they don't here. I think in many cases tillage would be very useful in this country for fattening cattle.

40928. Sir FRANCIS MOWATT.—They stall-feed them in the winter?—Yes

40929. Mr. SUTHERLAND.—If they stall-fed cattle

* See Appendix to Third Report of the Commission [Cd. 3414, 1907], p. 345, *et seq.*

they would be obliged to till to get wintering for them?—Yes.

40930. And for that they would get the manure for the land?—Yes.

40898. Do you think they would be opposed to it?—Yes.

40931. How do you account for the fact that this system is not more largely used in Ireland?—The people are not used to it. They did not know it, and the grass in Ireland is more fattening, perhaps.

40932. They trust more to the fattening of the grass outside?—Yes, and to raising the stores.

40933. Sir FRANCIS MOWATT.—Have you no experience of anybody who stall-feeds in Ireland?—Yes, plenty.

40934. How has it answered?—Fairly well. I am satisfied that it paid.

40935. When a fat beast goes over to England it gets some of its value knocked off it?—Decidedly.

40936. How much would you say—ten shillings?—Yes, and £1. They would lose a lot in the journey.

40937. Have you any experience of stall-fed cattle being killed in this country and sent over to England as meat?—Very little. It is not practised much.

40938. Would it save the sovereign?—Yes.

40939. Have you ever known it done?—Very little.

40940. Have you seen it done at all?—I might say as to Scotland I did not. I have not as much knowledge of the London market, but I did not ever hear of it being done. They might do it from Dublin sometimes. They get from London up to Glasgow sometimes. According as they get cheaper in one market they will send it to another. It is not adopted between Ireland and England and Scotland as far as I know, and I have travelled the whole road many a time. The other thing I wish to bring under your notice is the sheep. You send a great deal of them across to this country, and you ought to urge on them to feed on the mountains here the black-faced horned sheep and the cheviots. These are two classes of sheep that would be very suitable for the mountains, particularly in Clare and all through the West. There is mountain running from here fourteen or fifteen miles to the vicinity of Limerick, and you won't get a Scotch sheep on the whole of that except with one man.

40941. Mr. SUTHERLAND.—On these mountains there are no sheep?—Yes

40942. The mountains are practically waste in consequence?—Yes. It is alarming how the money goes across to Scotland for sheep. It has only just commenced, and in a few years it will represent a very large amount, and all those could be raised in Ireland. Here are the figures (*produces return*).

40943. Sir FRANCIS MOWATT.—This a statement showing by Irish ports the number of sheep and lambs imported into Ireland from Scotland during the eleven months; what sheep are these?—These are mixed cheviots and black-faced lambs. There are a few crosses, but they are chiefly cheviot lambs and cheviot ewes.

40944. Your point is that by importing some rams you might breed them here instead of importing them from elsewhere?—Yes. That means £50,000 and more, and it will be treble that; and the people on the mountains in this part of the country could supply these and more.

40945. Mr. SUTHERLAND.—You are aware that in parts of Scotland the mountain grazing is the most valuable of all, because of the sheep?—Certainly; and they are not working it here in this country. Scotland is, and it is possible that they have two or three sales at the end of these seasons. They give prizes for the best on these lands, and they are improving every year. In the west of Ireland and in the mountainous parts of Clare, I see nothing that would suit better.

40946. What could be done to encourage these people with mountain grazing to put sheep on them?—A Board should do it.

40947. Do you mean the Board of Agriculture or the Congested Districts Board?—Both.

40948. Mr. KAVANAGH.—How could they encourage people to do it?—By bringing them across.

40949. You have to show people that there is money in it first?—Here is £50,000 sent over to Scotland for what could be got in Ireland. You could feed that number on portions of the hills of East Clare. And this thing is only in its infancy. Next year you may have double the amount.

40950. Most Rev. Dr. O'DONNELL.—What is being done with those sheep? The ewes are put on the good lands; there is a home ram let run with them, and the lambs are generally sold fat. I have experience of that. Mr. Hogan is trying that game in this country. I bought them in the commencement. They are paying him well. The ewes are worth £2 a year, considering the couples and the prices they make.

40951. Is this your point: there are mountains in the neighbourhood which are not turned to account in any way because black-faced sheep are not put upon them?—That is my point.

40952. Mr. SUTHERLAND.—That could be met by the Board of Agriculture bringing that before the Irish farmers and pointing out to them the way in which it is done in Scotland?—Yes, and by importing some of them themselves, the same as they are shoving on the Shorthorn that is not suitable at all for poor districts.

40953. It would require on the part of the people knowledge of how to deal with sheep. It is not all farmers in Ireland who know this. They would require to learn by experience?—Yes. It is very hard to make them do it, but I think the Galway men are more up in it; also I would say in the North of Ireland they are more up in it; but in this part of the country it would take a little time before they could do it.

40953A. Sir FRANCIS MOWATT.—You say that the Congested Districts Board or some other body should import these sheep?—Certainly.

40954. That is exactly what is being done?—They could be raised in Ireland.

40955. Why don't they breed from the sheep that are brought over. Here you have 46,000 sheep of the sort you think should be bred here imported in a single year. Why don't the Irish farmers breed from them when you have got them on the spot?—They don't understand it. They have not got them at all.

40956. It is not a question of the Board importing more, but the Board teaching the Irish farmers that this large importation should be used for breeding?—Yes, but they should get help in some way or be stimulated by the Board. They are doing other jobs not as essential as that. They are shoving the shorthorn on the mountains, though the world knows that it is not a suitable animal for the mountains.

40957. You say it is not a good thing for Ireland that these things should be imported instead of being bred on the spot, and your remedy is that some Government Board should import some more?—Quite so.

40958. I want to put it to you: here is the material of breeding as many of these sheep as are suitable to your mountains. What you really want is that the Board or some competent authority should teach the Irish farmer when he has imported these Scotch cheviot sheep to breed from them over here?—Quite so, on this mountain land, and then come down to the good lands.

40959. Mr. SUTHERLAND.—Is the fattening of lambs for the butcher increasing?—Yes, and increasing remarkably well.

40960. Before they never killed until two years, and they now fatten lambs and sell as mutton?—Yes. These small Scotch sheep are good nurses. One of them can fatten a pair of lambs while our own can do nothing of the kind.

40961. Most Rev. Dr. O'DONNELL.—I notice that the importation of lambs to Derry is 5 569. I suppose that most of those are black-faced lambs for the mountains?—Yes.

40962. You would be quite right in thinking that they are a useful kind of sheep for mutton, but the wool on black-faced sheep with long horns is not warm wool?—It is not, but it is useful for the pasture.

40963. Mr. SUTHERLAND.—At present I understand that these lambs are taken from Scotland for the purpose of fattening them in Ireland after they are weaned?—Yes.

40964. They are not kept for breeding at all?—In some cases the ewes came for breeding. The lambs are kept to make them into hoggets and sell fat. They generally keep them for about a year.

40965. Sir FRANCIS MOWATT.—Do you say that the lambing season here is as good as in Scotland?—If carried out in the same way it would be as good, and better. The mountains are more fertile for sheep. I hope you will look into this, because as long as you are without doing it it will be a big loss to the congested districts.

June 7, 1907. Mr. MICHAEL MACNAMARA examined.

Mr. Michael MacNamara.

40966. Sir FRANCIS MOWATT.—Are you a farmer?—No. I live at Clountagh, Scariff, with a brother of mine, who is a small farmer. I represent the electoral division of Inniscaltra South, in the Scariff Union, as one of the Rural District Councillors. The division consists of only eleven holdings, varying from £50 to £5. It is on Mr. James Wakely's estate, Mountshannon, which estate is now offered for sale by the landlord to the tenants, and agreements have been entered into at twenty-two years' purchase of second term rents.

40967. Do you mean to say that the tenants have agreed to that?—Some of them.

40968. Negotiations are still going on?—Yes. Six tenants in this division have refrained from consenting to any agreements for the following reasons. In this electoral division is a large grazing farm, the valuation of which is £50 5*s*., and contains about seventy acres. In the spring of 1905 the landlord gave this farm to a man named Bugler. Previous to that year this farm used to be devoted to grass, and a part of it saved up for hay, which used be sold to the adjoining tenants, they putting their yearlings on grass there from May to November each year, at so much per month, and buying the hay for fodder the following winter. This grass farm is divided into two sections; about one-fourth of it lies above the main road, and behind this section live three families whose only means of access to the road is through a river for about half a mile. This river is, I believe, the third largest in East Clare. Nevertheless, through this the people have to trudge to Mass, or wherever they go. About sixteen years ago the landlord gave these tenants a road through this section of the grass farm, which they enjoyed till about twelve months ago, when the new tenant turned them back into the river again. They have now not even a footpath to the main road save through this river, where sometimes a heavy flood lasts for weeks. This is how the Land Act of 1903 has worked in this locality; these six tenants will never sign purchase agreements until this new tenant will be dispossessed, and the land divided amongst them, which if done, instead of creating a new tenancy of it, it would make the holdings economic, and they would have a chance of living in their own country. I think that compulsion is necessary to have the untenanted land divided properly amongst the people. I also ask that this division be scheduled as a congested district.

40969. The landlord, sixteen years ago, gave the existing tenants a right of way over this grazing?—Over a part of it.

40970. He then let his grazing farm, or sold it to a new tenant?—He gave it to him in some way that I cannot understand.

40971. He gave him the freehold of it?—I presume so. He has it.

40972. Then it became the property of this new man?—Yes.

40973. And the tenant's right of way was not established because the time during which it had existed was not long enough; twenty years has not elapsed to establish the right of way?—Yes.

40974. Now these tenants have no way out except across the river?—Yes, and it is the third largest in the County Clare, and there are often floods there for a week, and the people cannot go out to fair, Mass, or market.

40975. You say that six of the tenants refuse to sign the purchase agreements until the three families thus affected get back their right of way?—Yes, and until this grass land is divided among the small tenants.

40976. But it belongs now to the man to whom the landlord has given it?—Yes; he is living there right enough. I always understood that that was the spirit of the Act. It is two miles from the demesne.

40977. If the landlord has given this seventy acres to the new man, how can he take it away from him?—It is a very grevious thing that these unfortunate men are living there without a right of passage through this place.

40978. Most Rev. Dr. O'DONNELL.—You don't know what kind of tenure the new occupier has?—I do not.

40979. Your point is that it would be according to the spirit of the Act of 1903 that that land should be taken up and the right of way restored to the three families, and the land itself divided among the small occupiers.

40980. That is what you wish to convey?—Yes.

40981. Our chairman, and the rest of us, are in this difficulty, that we don't know, and you cannot tell us, what the tenure of this new man is?—Yes. There was an eviction there about forty years ago, and since then, until the new man came, the land was there for the use of the small tenants who lived in the neighbourhood.

40982. On what township is that?—Clountymweenagh.

40983. The only untenanted land in Clountagh in this return which we have is 99 acres 3 roods 38 perches, and the owner is given as Flora J. Hibbert?—No, the owner of this land is Mr. Wakely. These poor men cannot get out of their places. We have no balloons in this part of the world.

40984. Sir FRANCIS MOWATT.—All we can do is to take the evidence and record it. Is your brother one of the three tenants?—He is.

40985. He does not know what is the position of the man between him and the highway?—I believe he does not.

Mr. PATRICK KEANE examined.

Mr. Patrick Keane.

40986. Sir FRANCIS MOWATT.—Where do you reside?—At Clonamellon, Mountshannon—I represent the electoral division of Mountshannon.

40987. Are you a farmer in that division?—Yes, I have 36½ acres. My rent is £7 on second judicial term and my valuation is £8 10*s*.

40988. Your district is already scheduled as "congested"?—Yes.

40989. Tell us what you want to say?—The congested electoral division of Mountshannon consists of five townlands, four of which are situate on the estate of John F. George. There are fifty tenants in this district, thirty of whom occupy holdings under £5 valuation and over forty under £10 valuation. The holdings are in most cases small and poor, consisting of a few patches of reclaimed mountain, with a few acres of heathy mountain attached. The occupiers usually buy some hay, and put their little cattle to graze by the month. Emigration has hitherto been their only hope As soon as the children are able they go to service or earn daily hire, and when grown up they go to America. These holdings greatly need to be enlarged by the addition of a few acres of arable and meadow land. Migration is necessary, and some of the people, especially the young, would be willing to migrate. There is a large tract of mountain and some untenanted or demesne land in the locality which, if acquired at a fair price by the Congested Districts Board or the Estates Commissioners would go far to relieve the congestion of the district. The mountain, which is in the hands of the landlords, consists of about ten or eleven hundred acres, and has been offered to the tenants. Negotiations for sale are in progress on this estate.

40990. Most Rev. Dr. O'DONNELL.—Do the tenants graze on that at present?—Yes.

40991. Sir FRANCIS MOWATT.—Do they pay for it?—Yes.

40992. Most Rev. Dr. O'DONNELL.—Is the payment separate from the rent?—Yes.

40993. If the holdings were sold to the tenants would the tenants acquire the right of grazing on this mountain?—It appears that they would, according to the terms offered to them.

40994. And according to the terms that they are willing to accept?—But the mountain in itself, I am afraid, would not make their holdings economic.

40995. But they would like to have it such as it is?—It is better than nothing. Their future position would be much worse if they did not get it.

40996. In addition to that you would desire to see he grass land made available for the enlargement of oldings?—Yes.

40997. Sir Francis Mowatt.—Did you also say here was a grazing farm in that district?—There re lands in the demesne all untenanted; it is tuated lower down, partly by the margin of the ke, and it is let for grazing now and meadowing r the last ten or fifteen years.

40998. There is this grazing by the lake in addi-on to the meadowing?—Yes; one division has been t to the tenants on an outside estate. There is a ver running through this district which is causing nsiderable waste to several holdings. If this river uld be cleaned and banked so as to keep it from eat-g curves in the adjoining land it would be a work f local utility.

40999. Mr. Sutherland.—What is the name of the iver?—It flows into Lough Derg, a little east of Mount Shannon. There are also two old Board of Works roads running through this district, which, if epaired, would be of use. The road running from Derrycon Lower to Bohatch is one of the utmost tility. There are ten families on either side of this ld Board of Works road, also it is leading into fifty cres of a bog, from which all the people of Mount hannon get their turf. The same applies to the oad from Derryoran to Derrygoolan.

41000. Sir Francis Mowatt.—What are the terms f purchase for which negotiations are now going n?—The landlord has offered to take twenty-two ears' purchase on second judicial rents, and I think ighteen upon non-judicial. There are not many irst judicial rents. A good many of them have igned preliminary agreements, but a minority have efused to sign.

41001. Most Rev. Dr. O'Donnell.—The negotia-ions suppose that this mountain would go to the enants?—Yes.

41002. Have the tenants requested the owner to sell irect to the Estates Commissioners or the Congested Districts Board?—They have suggested that to the wner, but he has declined that.

41003. Would not there be this advantage in either f these bodies buying direct? They would have this rass for enlargement of holdings?—Yes; the Con-ested Districts Board has been communicated with n connection with this estate. They declined to in-erfere, as the estate had not been offered to them for ale. I have a reply to that effect.

41004. At all events the tenants did ask the Con-ested Districts Board to intervene?—Yes.

41005. And the Board replied that they could not, s the estate had not been offered to them?—Yes.

41006. Did the tenants ask the owner at any time o sell to the Congested Districts Board?—I could ot say that, but they asked him to get it into the ands of the Estates Commissioners, and they would bide by the arbitration.

41007. That would in effect be the same thing. The importance to the tenants of selling either to the Estates Commissioners or the Congested Districts Board would be that the Estates Commissioners or the Congested Districts Board would have this grass land divided among the uneconomic landholders, putting upon each of them an instalment to repay the price of it?—Yes. There is another electoral division—Inishcaltra North—in which the same conditions prevail as in the division to which I refer. I am of opinion that the two other electoral divisions of this parish—namely, Inishcaltra North and Inishcaltra South, ought to be dealt with as congested districts, all the conditions of congestion being there. On the Hibbert estate, most of which is situate in Inishcaltra North, there are about 50 tenants, 28 of whom are under £10 valuation and 18 under £5 valuation. Nearly all the small tenants live in one townland (Selernane). They buy inferior hay, and put their little cattle to graze on a large tract of mountain to the rere of their holdings.

41008. Sir Francis Mowatt.—Do they pay extra for that?—Yes. Emigration is the rule on this estate also. Migration is essential in this case. I am of opinion that the mountain held at present by the landlord ought to be bought up by the Congested Districts Board or the Estates Commissioners for striping out among the tenants. There should be compulsory sale. Bohatch Mountain, where the Sellernann people graze their cattle, is a mile distant from their holdings. Very often they have to travel three miles over this coarse pasture to find their cows at milking time. For this grazing they pay one pound per year.

41009. Mr. Kavanagh.—Is there a Parish Committee in your district?—No.

41010. In any of the Mountshannon districts is there a Parish Committee?—No.

41011. In the case of migration do you think the people would be willing to move far?—They would prefer to get some enlargement of their holdings if possible. The young people would prefer migration very much to emigration.

41012. But it would have to be the whole family if there was migration at all. Suppose you could not get land in the district, do you think any of the people would be willing to move a distance far away?—Some of them would.

41013. It is impossible to carry out a scheme of migration unless the people are willing to move?—Of course.

41014. Sir Francis Mowatt.—Not only that the people are willing to move, but that the people of the district to which they are moved are willing to receive them?—Yes.

41015. Mr. Kavanagh.—There is not enough untenanted land in your district to make all the uneconomic into economic holdings, and you would have to move some?—Probably you would.

Mr. James Driscoll examined.

41016. Sir Francis Mowatt.—Where do you reide?—At Drimeen, Broadford. I represent Mr. Dooney, who was to have come here, but he is sick. have here a list of some of the tenants under £5 valuation, and also a list of the big grass farms in he locality. It is in the Tulla union. In the Kiluran electoral division, in the townland of Bally-MacDonnell, there are three partners who hold fifteen cres, with a valuation of £6 13s. 0d.; it is a mountain common between them.

41017. How do they so come upon it?—They have t in common.

41018. Do they pay rent in common?—Yes.

41019. Most Rev. Dr. O'Donnell.—Have they been there a long time?—Longer than I remember.

41020. Are they brothers?—They are not—they are all different names—they are neighbours.

41021. Do they live on this holding?—They do not; hey have small holdings at present near that. It s common grazing.

41022. Mr. Sutherland.—They have separate rable holdings?—Yes; Catherine Fleming, Matthew Macnamara, and John Cullinane have 2 acres 3 roods and 33 perches in common, and there is only five shillings valuation on it.

41023. Sir Francis Mowatt.—You need not go through all the cases; you have a list of small occupiers who have small grazings in common, apart from their own individual holdings?—Yes; they are all under £5 valuation. We want to let you see that the place is poor. Here are some big ranches in the same division.

41024. One is 246 acres; valuation, £176; to whom does that belong?—That is Killgorey; it belongs to Mr. Daniel O'Connell.

41025. That is on the eleven months' system?—Yes.

41026. Here is another: 130 acres; £70 valuation; is that on the eleven months' system?—Yes.

41027. And the third—346 acres, £162 valuation; is that also on the eleven months' system?—Yes.

41028. So that practically there is about 750 acres of grass land?—We have more in places that are not mentioned there belonging to a Mr. Smith. He is an absentee; he has 233 acres at £124 10s. There is another belonging to a Mr. Going—101 acres, at £40 14s., and there is another here belonging to Mr. Going also, he let it a year ago.

41029. There are practically twelve hundred acres of grass land?—Yes.

June 7, 1907.

Mr. James Driscoll.

41030. Let on the eleven months' system?—Every bit of it. There is not a single one of them who has a bit of it in his own hands.

41031. Your point is that they should be purchased and divided among the small holders?—Yes, to a great many of them, who are very small.

41032. Most Rev. Dr. O'Donnell —Who require enlargement?—Yes.

41033. They would be willing to pay an equitable price for the enlargement?—They would.

41034. Would this land be sufficient to enlarge all the small occupiers in the district?—It would give a share to the worst cases.

41035. What about the balance of the occupiers; would they be willing to migrate to some distance?—I would not be able to tell you that. If they were made better off they would be glad to go.

Rev. J. J. Maguire examined.

Rev. J. J. Maguire.

41036. Sir Francis Mowatt.—Where do you reside?—At Tomgraney. There are some matters to which I would like to draw attention. The first is this question of migration. I heard a great deal of talk about it here to-day, and about the danger of the people not availing themselves of it if it were in operation. I think that is a great mistake. If the people got an opportunity of migrating they would be only too glad to go, even to adjoining counties.

41037. You say that of your own experience; have you talked to people about it?—Yes; I have been talking to a number of people about it for many years. I have twenty-eight years' experience among the people, and in six counties. My experience is they would be only too glad, where they are badly off, to go to other parts of the country, if they only got an opportunity of doing it—to other counties, and even to other provinces—only too glad, if a number of poor miserable people on the mountain sides around here could better themselves by doing so. Running along yesterday, coming from Ennis, you might have noticed that the country was very poor and congested. In another portion on the mountain side the people are also very badly off. I don't know how they can ever live there at all. I don't see how any improvement can be affected in the nature of the holdings; because the land is of such a nature that it is almost impossible to affect any radical change in the holdings to enable people to live substantially well there. The water is oozing right through the mountain, and any amount of cultivation won't bring it to such a standard that people can live on it. There would be no difficulty about migration if you get us the land. Give us the good land to put the people on, and they will go there instead of going to America; they would be very glad to take it up.

41038. Most Rev. Dr. O'Donnell.—Were you present to-day when the Chairman asked one or two witnesses whether the people of the district to which they sent migrants would be willing to take them?—I don't believe there will be any difficulty in that way, because the people in these districts where you take up land for the purpose of putting people on it, are fully supplied with land already; and except they want more than they are able to cultivate, and more than is good for them, and more than ever, in the present condition of things I would permit them to have, they should have no objection. It is a great pity that we have not any legislation about confining people to a certain amount of land. It is a great pity here through the country that Parliament does not make a law prohibiting a man from trying to manage more than a certain amount of land; because you have nine-tenths of the people in starvation while the other one-tenth have too much; and it is to the detriment of the country that they should have as much as they have.

41039. Sir Francis Mowatt.—Have you any limit in your mind?—I would say a hundred acres are as much as it is good for a man to work.

41040. It may depend a little on the nature of the land?—It should be good land; 100 acres of fairly good land are as much as I would give to any man to work, and as much as any man could work without it being a detriment to the community. I would say forty or fifty acres for an average farmer would be just as much as he could manage with satisfaction to himself and his family and the community. In considering this matter the question of the community at large is the matter that seems to be overlooked altogether. It is a matter that, in the first place, should be attended to, the benefit that would result from the division of the land among the people.

41041. You think that is overlooked?—I am rather inclined to think it is. I don't see much attention given to it either in the press or at public meetings. Something like that I think is necessary for the Government to interfere and make a law that a man should not hold more than a certain amount of land. In the case where congestion and poverty exist among the people the necessity of going away will be avoided if you restrict farmers to a certain amount of land, say 100 acres or thereabouts, and the rest of the land be divided among the poor people, to take them from their condition.

41042. Most Rev. Dr. O'Donnell —When you migrate people to grass lands at a distance you would be careful at the outset to enlarge the holdings of any small men whose holdings needed enlargement in the district, to which you migrate them. Would you begin by attending to the needs of the locality first?—Certainly; to a certain extent I would give them enlargements; if they were small holdings I would give them a division to bring them up to a certain point, and after that then I would migrate the people from other districts. I wish also to refer to the drainage. There was a question this morning as to what was to be paid, in order to repay the necessary expenditure; a former witness did not seem to understand it. I can speak on the subject. For the past twelve months it has engaged my attention very much; and the people are only too willing to pay even to the last penny for interest on the money necessary to settle this drainage question and it would be well worth the while of the farmers as they would benefit two or three-fold. But they would expect, in a matter of such a large and general expenditure as £47,000, that is contemplated in what is called the Scariff Drainage, that the Government would come to the rescue and give them some assistance free; but if they are not prepared to do that then I believe they will after a little time. Now that the report of the Arterial Drainage Commission has been made and printed, and every district has had its needs put forward, I believe the Government will assist the different localities, and the people will be prepared to pay whatever further extra they have to pay; and it would be well worth their while to do it without murmuring. The drainage question has been a most pressing one for over forty years. Recently when this Canal Commission began to sit, the people of the district thought a favourable opportunity was afforded them of having this drainage question brought to the front again. I put myself into communication with the Canal Commission in London, and put all the evidence I could before them, in connection with this canal question. The idea was to run a canal along the river here to Tulla which would serve not only as a medium that the people wanted so badly as they have no railway, but would also act as a drainage for the whole country. In fact, it would serve a double purpose. I had a great lot of writing with the Secretary of the Canal Commission, and for a time they contemplated that I should go to London and give evidence before them. After some further communication with them, sending a full report of the evidence to put before them, they said they were coming to Ireland, and would examine me there. If they come I will only be too glad to appear before them personally. Here, in the first place, we have in the village of Tomgraney, the parish in which I am, a beautiful stone. I hope of you when you are going to Killaloe this evening

o pull up at the rock and take a view of the place. t is a beautiful stone. It was worked years ago, nd it is a great pity that something is not done vith it by some Board or other—I hope by the Con- ested Districts Board. Later on I hope that it will stablish some kind of a factory. We were hinking of a woollen factory for a time. Four or ive hundred people could get work in this if only he appliances were there and a little capital to start vith and the people to instruct us. It would relieve ongestion there by the use of those things that ature placed at our disposal. Clare and the County alway are two of the best counties in Ireland for vool. All our wool is being shipped away; and if ocal committees were got to put before the people the ecessity of wearing the Tomgraney freize—if I may all it so—or tweeds or anything else, the same as our lordship established in Donegal, it would be a reat advantage. There is a great run on the Done- al material now; it is sold in the shops in Clare. f you have not a Donegal tweed they will run out of the shop as if you had fired a revolver at them. I hope the time will come when we will have a fac- ory over there with four or five hundred people vorking in it, and all our wool manufactured at ome. We will expect to do that later on, when we ope, as the result of your coming here to-day, to be placed under the Congested Districts Board; when ve will expect by making application to the Board, hat they will send us an expert to see what will be est for us; and if we consider that the woollen busi- ness is the best for us, we will ask the Board under these circumstances to help us to buy any machinery and send us people to educate our people, and keep them at home from America. The working of it is quite easily done. We have here side by side with the Scariff an old flour mill, and this flour mill was burned some years ago. Electric power could be very easily generated there by water power and trans- mitted to our factory at Tomgraney, setting the whole machinery at work. Father Halpin has been so kind recently as to establish an embroidery class here to help our poor people to keep them at home. The ladies from all the parishes from Killaloe to Mount- shannon have taken an interest in it. Fifty or sixty or seventy girls have been employed in this room which Father Halpin placed at their disposal. They have already commenced to earn money, and later on we all expect that they will earn a great deal of money.

41043. Is there not an exhibit in Dublin from this centre?—Yes. I know a great deal about the people of all the parishes about here and about the landlords, and I am very glad to be able to state before you here to-day that there is a grand disposi- tion existing upon the part of the landlords and the tenants to buy and to come to terms—a magnificent disposition to meet each other, and making terms and arranging to have the tenants becoming peasant proprietors. There is very little land to be divided around here. There is a great deal in the district of which the last witness was talking, but in this district there is no land for distribution.

Mr. John M'Auliffe examined.

41044. Sir Francis Mowatt.—You desire to make a statement?—Yes. I am Grand Canal Agent at Scariff. I understand it was expected I would give some evidence about the canal service to Scariff, and the difficulty of getting in goods in the winter time. The canal is between Scariff and Killaloe; our chief difficulty is with floods. The river being narrow, the steamer is unable to force her way against it. We have to lie down the river several days sometimes when the floods are fierce.

41045. When you speak of the period of flooding what months of the year do they occur in?—January and February and sometimes March, and December, of course.

41046. For three or four months each year transit is pretty uncertain?—Yes.

41047. And for the other eight or nine months it is fairly certain?—Yes; there are fogs and other things, of course, over which we have no control—fogs out on the lake.

41048. These are chiefly in the months you have mentioned?—Yes.

41049. Therefore, may I take it that for about eight months in the year there is no serious obstacle in carrying on the canal service?—There is no serious obstacle in these eight months. The river is a kind of Tennyson Brook, zig-zag, a very narrow gut, thereby rendering the little steamers powerless to go against it.

41050. Mr. Sutherland.—What is the length of that?—About three-quarters of a mile before you come to the quay.

41051. How near can the steamer come to the town?—Within a few hundred yards of it.

41052. Is there a regular traffic here or is it just hiring a vessel for the voyage?—There are three boats certain a week, but there are fogs, floods, and storms.

Mr. John M'Auliffe.

41053. What do you charge for carrying one cwt. to Killaloe?—I don't know what they charge to Kil- laloe—about 6*d.* or 8*d.* under 3 cwt. The freight is cheaper for, than for anything over, it. You get a tonnage rate for anything over 3 cwt.; for under that you get a scale charge.

41054. It is cheaper to send a large quantity?—Yes.

41055. Are there intermediate calls between this and Killaloe?—No.

41056. Does the same vessel go afterwards up the lake?—There is a service from here to Dublin.

41057. Sir Francis Mowatt.—Is the trans-shipment up to Dublin equally affected by floods?—Not on the canal; until you come down to this lake you will be held by storms. Of course any vessel will be held by storms. That is our chief obstacle; and the town has been very often in a bad state owing to the scarcity of food.

41058. Mr Sutherland.—Would it be possible to make a canal from here to the lake?—I understand that a gentleman, a Mr. Reid, had plans drawn up to make a new cutting, to avoid the old stream. That would have been a great benefit to the town. These plans, I believe, were with the Board of Works, but I suppose they could not be found to-day.

41059. Would the canal require to have a lock on it?—Yes. We have an immense current of water from the upper country; the water is held up in two large basins, one six miles; and the other about nine miles away.

Mr. Daniel Ryan examined.

41060. Sir Francis Mowatt.—Where do you reside?—At Kilsealy, Broadford.

41061. Are you a farmer?—Yes. I have about forty-six Irish acres; my rent is £20; my valuation is £22 5*s.* The holding is in Limerick No. 2 Rural District. There is one property belonging to Mr. Bentley, which comprises 259 acres of grass land on the eleven months' system; then Mr. Phelps has twenty-five acres. These are surrounded by a great lot of small holdings on which there are thirty

Mr. Daniel Ryan.

June 7, 1907.

Mr. Daniel Ryan.

families, whose valuation averages from £3 to £9. They average generally there about six in family; and perhaps they may be more. They have very poor poor places on the mountain side. Sometimes they will have a little crop and more times they won't, according to the year. This grass land is set on the eleven months' system at present. The greater part of it was in meadow some time ago, and the landlord used to sell the hay off it to these tenants at a high price. Now they have no hay to get, and they have to sell their little cattle before they are fit at all.

41062. Don't the eleven months' graziers take any cattle?—The farms are grazed by those who hold on the eleven months' system. Some time ago the landlord used to have hay on it and sell the hay to the tenants; now there is no hay on it, and these poor people have to pay a higher price for the hay outside, along with the bother of bringing it up a big hill.

41063. Mr. KAVANAGH.—The grazier does not take any cattle from the people all round?—No; he goes around the fairs and buys cattle and puts them on it.

41064. Sir FRANCIS MOWATT.—Does not he buy the calves?—Sometimes he might, if they suited. If they did not, he would not; he would go to some other place. If the grass land could be broken up and divided among the small holders, it would improve them very much.

41065. Mr. KAVANAGH.—Who are the graziers?—One is John M'Donnell.

41066. Is he a cattle dealer?—Yes.

41067. He jobs in cattle?—Yes; that is all that are grazing at present, the rest of the land is idle.

41068. Sir FRANCIS MOWATT.—What you say is there are 280 acres of grass lands, and if that were divided among the small holders of that district it would bring them up to a living point?—It would fairly well. There is a beautiful slate quarry on some of the land that we and other tenants hold; and if that could be managed and worked properly it would cause great employment in the place. It is within half a mile of the village of Broadford. A great many slates were worked there. I was working it myself for a while, and it got too deep, and I could not work it.

41069. Mr. KAVANAGH.—You would be quite willing to give it up if it were going to be worked by somebody else?—Certainly, I would, to be sure. At the other side of the village there is an old mill idle for the last thirty-five years; it was worked by water power, and the weir is throwing back water on the land, and doing a great amount of damage.

The Commission adjourned.

EIGHTY-SECOND PUBLIC SITTING.

MONDAY, JUNE 10TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At 35, Dawson Street, Dublin.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

The O'CONOR DON examined.

June 10, 1907.

The O'Conor Don.

41070. CHAIRMAN.—You have been nominated by the Landlords' Convention to give evidence here?—Yes.

41071. Your estate is in County Roscommon?—Yes. My place is Clonalis, Castlerea. I am His Majesty's Lieutenant for County Roscommon. Although I have practised for some years at the English Bar I have had considerable experience in matters connected with land in the West of Ireland. I have for practically the whole of my life spent a large amount of my time in the West. Every year I have spent at least some months there. When I came of age my father made over to me a small property, and on his death, last June, I succeeded to his estates, and for many years previously I knew of all his dealings with his tenants, and have seen all the changes in land matters in my district, which includes part of a scheduled congested area. That small property made over to me by my late father was bought in the Landed Estates Court, and I wish to mention, having regard to the questions asked by Sir Antony MacDonnell, in London, of persons who bought holdings at fifteen years' purchase and sold them at twenty-five, that this property was bought for £10,000. That included costs and everything. I have since sold that property under the 1903 Act for £3,800.

41072. Sir ANTONY MACDONNELL.—What was the exact amount of the purchase money paid for the property?—The purchase price was £9,000 some hundreds, but with stamp duty, costs, and so on, the amount paid was somewhere about £10,000. I forget whether it was £20 over or under the £10,000. As you are no doubt aware, the purchaser in ordinary sales pays the costs. But that is not so under the Land Act. It was bought subject to charges, and although it was sold for considerably more than £3,800 yet when the charges were paid off the actual receipts would represent about £3,800.

41073. Sir FRANCIS MOWATT.—What was the date of the purchase for £10,000?—I could not tell you the exact date of the contract. The negotiations, which took some time, were in 1863-4.

41074. Sir ANTONY MACDONNELL.—And when was it sold?—It was one of the first estates sold under the 1903 Act. The agreements were within a month of the Act coming into force, the tenants being anxious to buy. I may say that in the interval a large amount of money had been spent in improving the estate.

41075. Most Rev. Dr. O'DONNELL.—Was the whole estate sold?—Yes, the whole of the estate. It was not near the family property, which was seven or eight miles away. There were two townlands, and they were sold direct to the tenants under the Estates Commissioners.

41076. CHAIRMAN.—Is there any explanation of the fall in price?—I think there is. In the first place, the estate was bought at a time when prices were high, and the drop in rents in the meantime has been enormous. The whole of the reductions in rent fell on the margin. What I mean is, the property was bringing in about £600 a year, and there was a head rent of £200. The rents were reduced, and the reductions fell on the £400. Although the reductions on the rents are only 30 per cent., the net receipts have fallen by £200. But that is not an exceptional case. It is the case in a very large number of properties in Ireland. I am only giving that as an explanation.

41077. The head landlord's charges remain fixed and unaltered by the Act of 1881?—Yes.

41078. And the sub-landlord's interest becomes affected by the fall in rents?—Yes.

41079. And therefore, although the value of the property may be depreciated, the head landlord's income remains at the same amount?—Yes.

41080. That is the case with regard to Lord Leitrim's estates under Trinity College?—I dare say that is so. It is very much the case all over Ireland where there are fee-farm grants, and this was a fee-farm grant. This property brought in £650 originally, but the rents were reduced till it brought in only £400. Eventually the tenants got a little more reduction of rent by a mistake of the land agent.

41081. Sir FRANCIS MOWATT.—In 1853 the rents amounted to £650?—Yes, roughly.

41082. And they fell to about £450?—They fell to £400. I may say that within a year of the purchase a reduction of 3*s.* in the pound was given to the tenants all round. My father was always looked upon by the tenants as most reasonable. The tenants complained that the rents were too high, and he sent out two tenant farmers to value the whole property and fix rents.

41083. Sir ANTONY MACDONNELL.—To what was your margin reduced at the time the estate was sold?—To £200.

41084. And then you got £4,000 for it?—I got £3,800, but of course that is including the bonus. I had a pull, of course, when I got the bonus on the head rent.

41085. It comes to this, that when the property was bought it was bought at sixteen years' purchase of the rents, and when it was sold it was sold at twenty years' purchase on your margin?—No, it was bought at a good deal more than sixteen years' purchase.

41086. The rent was £650, but the head rent was not bought; it was only the £450 that was bought?—Yes.

41087. Then you leave the £200 head rent out of it altogether?—Yes.

41088. And the £450 rent was bought for £10,000?—Yes.

41089. That would be over twenty years' purchase?—It would be about twenty-two years' purchase.

41090. When the estate was sold for £3,800 your margin was only £200?—Yes.

41091 And that is nineteen years' purchase?—Yes.

41092 And on that you got the bonus?—No, the bonus is included in the nineteen years' purchase. If I had not got the bonus I would have got next to nothing at all. As a matter of fact, if you put costs, expenses, and charges against the bonus the one comes to 13 per cent. and the other to 12; so there is nothing in it.

41093. CHAIRMAN.—Then the drop in the sale price is due to the reduction in the rents payable to you?—Yes, and largely due, as is the case in a huge number

June 10, 1907.

The O'Conor Don.

of estates in Ireland to the fact that the nominal owner has to bear a reduction on the whole, and I think fairly so. I am not complaining of that. I do not think it would be fair to make anybody else pay that.

41094. Most Rev. Dr. O'Donnell.—At how many years purchase of the actual rents did you sell to the tenants?—Well, there were different agreements with the tenants. Some at sixteen, some at eighteen, some at twenty, and one or two at twenty-two. So I think it would work out at twenty years' purchase as a fair average.

41095. Was that on rents first reduced by the Land Courts, and then 3*s.* in the pound further by your father?—The rent in 1862 was not really £450, because within a year they were all reduced by 3*s.* in the £1. Then in 1883 or 1884 my father gave to the tenants who signed fair rent agreements a further reduction of 3*s.* in the £1. The whole of the tenants practically signed but I believe the agent forgot to register any of these agreements. A large number of the tenants went into Court again and got a still further reduction. I think some of them got a third reduction. I may say the last reduction was not much, but the net result is that they had a great deal more reductions than most tenants get, because they had practically three fair rents fixed instead of two. Owing to the non-registration of the voluntary reductions, the tenants have really third term rents instead of second term rents.

41096. When you stated that the average years' purchase was twenty, you mean twenty years' purchase of the rents after their ultimate reduction?—Yes.

41097. I suppose you do no consider the original purchase in 1863 a good bargain?—No; I do not. I only mention that incidentally because of the point raised by Sir Antony MacDonnell regarding landlords buying cheap and selling dear. I think in many cases it is the other way—they bought dear and are selling cheap.

41098. Sir Antony MacDonnell.—But you won't deny that there are cases in the direction I suggested?—They are not very many, but I do not think because a man made a good or a bad bargain in the Landed Estates Court it is a reason one way or the other against a fair bargain now.

41099. I am thoroughly in favour of fair value to the landlord and fair value to the tenant?—A little later on I will give you figures as to the costs on this estate.

41100. Chairman.—What is the first point you would like to bring before the Commission?—I propose to deal with the matters before this Commission under a number of headings. The first is in regard to the area of congestion. It appears to me that the definition in the 1891 Act does not coincide with the poverty-stricken districts which are intended to be dealt with. In one sense the statutory area is much too large, and yet it excludes districts which are as poor, or even poorer. I do not mean to say that some of these districts are not poor. But in some districts there is a good deal of fishing, which is not taken into the Poor Law valuation at all.

41101. Mr. Sutherland.—Might not a district be congested even where there is an industry, or in other words might not some operations of the Congested Districts Board be very beneficially carried on even where there is some industry?—Quite so, but it does not follow that where the valuation is under the mark, if they have other means of livelihood they are congested. For instance, I should think London, and even more so, New York, are congested in that sense.

41102. But should not the Board's operations be carried on in such places as well as in less favoured parts?—I do not dispute that. Of course, it is very hard to get a definition which will suit everywhere. The real point I am working is that the area is rather too large. It would be better to restrict it to townlands, because in electoral divisions you may find one part all right and another portion not so.

41103. But I wish to point out that it is not with agriculture alone that the operations of the Congested Districts Board are altogether concerned, but have such matters as the sanitary improvement of the houses, which may be quite as necessary?—Quite so, but the definition deals solely with agriculture, and that is what I object to. I say you must take in everything, and not say that a place is congested because the agricultural means of livelihood of the people are slender. That is the definition of the Board, and yet, as you point out, the Board deals with other sources of livelihood, and I submit they should also be considered.

41104. Most Rev. Dr. O'Donnell.—Considering that agriculture is the main occupation of the people of Ireland you are not surprised that the Board in starting operations took a definition on agriculture alone?—I can quite see that. But I say there should be more latitude.

41105. You think the unit should be smaller than an electoral division?—Yes; the unit should be smaller, and further, I think it is very doubtful whether there should be a district considered at all, and whether the Congested Districts Board ought not to be given a free hand altogether to benefit such places as they thought fit, and as the resources permitted.

41106. Sir Francis Mowatt.—Would you say throughout the whole of Ireland?—Well, I would not limit them at any rate throughout the West of Ireland. That is my own personal view. I am not putting it forward on behalf of the Landlords' Convention. My own personal view would be to give the Board a free hand.

41107. Sir Antony MacDonnell.—Would you say within the province of Connaught?—There is the objection to that that you would then exclude Donegal and Kerry, parts of which undoubtedly require assistance, and where the Board have unquestionably done, and are doing, very useful work. I think it would be a great mistake to exclude Donegal.

41108. When I asked you that question my mind was fixed on the purchase of estates?—I would, in that case, restrict the Board to Connaught.

41109. Most Rev. Dr. O'Donnell.—If it were supposed that in the main the scene of the operations of the Congested Districts Board were to be the western province, would it be easy to include Kerry and Donegal, and perhaps some of Clare, as now?—I think it could be done, but I say do not tie them up. In the case of drainage schemes and such like, objection might be raised to a townland or district division, and there is no question that even with an electoral division the Board would have to go outside that if they are to do any good.

41110. Chairman.—If your suggestion were carried out the result would be that the Board would be operating all over the country in small patches because you can find poor townlands all over the country?—If you look at the map in the last volume of evidence you will see how they have been operating in patches.

41111. But that is practically all along the western seaboard, and if your suggestion were to be carried out the Congested Districts Board would have a free hand to deal with poor townlands wherever they could find them in Ireland. That would give most patchy operations?—I do not in any way suggest they should be bound to deal with poor places wherever they found them, but only where they think it advisable.

41112. They are not bound to deal with all the poor townlands at present, but if the Board had jurisdiction to deal with all poor townlands then it would be extremely difficult for them not to deal with a townland as poor as a townland in Roscommon or Mayo?—Sooner or later they could, but I think that having such a very large area would make it easier for them to exclude particular districts. If you draw out a map and say to the Board this is your district, that district is at present bigger than the Board can deal with at once unless there is a large augmentation of their funds; a townland or electoral division in that area comes and says—"We are in this area, what are you doing for us"? I know an electoral division in Roscommon where the Board are doing nothing, and the people have a much stronger case for insisting that something should be done than the people of some districts which have benefited. Now, if the Board had the whole country for the field of their operations, then they could say, "We must take things as we see fit and use our discretion. We are at present dealing with a part of the country which, in our opinion, requires our attention." I think that the bigger you make the area the less chance there is of pressure being put on the Board to go to a particular small spot.

41113. I do not wish to wander into a bigger subject, but take this as an illustration. As you know, at present the Board have power to purchase land within congested areas, or even outside congested areas, for the purpose of migration and the settlement of congested tenants. Now, unless you are going to restrict their operations in that respect your proposal amounts to this, that wherever there is a townland, no matter in what part of Ireland, you are to give the Board power to purchase land, perhaps in the immediate vicinity for the enlargement of holdings. That practically means that you propose to give the Board purchasing powers over nearly the half of Ireland, or in fact all Ireland?—Quite so. I quite see that, but at present they have purchasing powers over the whole of the country, only they cannot divide the land amongst those in the neighbourhood, and this gives trouble.

41114. Would it not be a great responsibility to put on a Board so constituted to give them power to buy land all over Ireland for the settlement of congestion in small areas wherever found?—No, because I do not think they would exercise or even be expected to exercise that power in respect of small plots here, there, and everywhere, but it would do away with some of the difficulties that at present exist. But even if you do not do that, then have townland units so that you can keep out of your schedule parts that have no necessity to be in, and include parts that ought to be in.

41115. Why should there be a definition at all?—That is practically what I am saying. Don't have any.

41116. Taking your point of view, I do not see the object of a definition even of a townland?—That is what I say.

41117. It seems to me that the more sensible way would be to make up your mind what is to be the area in which the Board should operate, either the whole of Ireland, as you suggest, or a restricted area as suggested by other people, and having settled that, then allow the Board to deal with congestion in that area in the best way they can without confining them to whether that congestion is in an electoral division or townland?—Quite so. Perhaps I did not express myself quite clearly. I said there were two propositions. First of all there would be no restriction or limit of boundary. That is my own view, and I do not put it forward on behalf of others at all. In that case I have no definition, but in the case of a townland impoverished use your absolute discretion. I would leave it to the discretion of the Board to deal with congestion wherever they found it necessary to do so. The other proposition was to deal with congestion, not in districts but in small poverty-stricken areas.

41118. Sir Francis Mowatt —When you used the word poverty did it merely escape you or did you use it intentionally?—I used it intentionally, meaning agricultural poverty in the sense in which we are dealing with it.

41119. Chairman.—What test would you have of poverty?—I would leave it to the discretion of the Board. I would not have a hard and fast rule. Now, if it is decided to adhere to congested divisions, and I can see that will probably be the plan, then I put forward the proposal to reduce the area of the unit, and have townlands instead of electoral divisions. If you are to continue the present system then I would favour a townland instead of an electoral division, but, personally I would prefer abolishing it altogether, but I see that there are difficulties in the way.

41120. If it were townlands would you adhere to the same poverty test of thirty shilling valuations?—No; I would rather leave it to the Board's discretion, because I think there are cases which the thirty shilling limit would include which ought not to be included, and, on the other hand, there are cases which that limit would exclude which ought not to be excluded. It does as a rough and ready test, but I would favour an inspection and confidential report to the Board, and let them deal with it. I would give them power to schedule and unschedule in that case.

41121. Mr. Sutherland.—Is a townland a well-known entity in Ireland?— A townland is the ordinary entity in the West of Ireland.

41122. Because it is the smallest community?—Yes. If you go about among the country people they can tell you the townland but not the electoral division a man lives in. Most of them have not the ghost of a notion about the electoral division. They all know at once the townland a man lives in, but if you asked them in what electoral division a man lived in a great many cases they would not know.

41123. The townland boundaries are well known?—Yes; the boundaries are well known.

41124. Most Rev. Dr. O'Donnell.—Your view seems to be that wherever outside the Western province a townland requires differential treatment the Congested Districts Board should be free to intervene and bestow that treatment on it?—Yes; not obliged, but free if they think fit.

41125. Would you favour the view which has been put before the Commission in the course of its sittings outside the congested area that in poor districts in Tyrone, Antrim, or Down, say, the Department of Agriculture should have special funds to enable them to give to the county committees a special grant for those districts, so that through the County Committee the differential treatment would pass to the places requiring it. That is portion of the suggestion. It would be balanced by this—that in case of sales the Estates Commissioners would discharge in these districts the functions of the Congested Districts Board towards the congests, and the Congested Districts Board might anywhere in Ireland buy land for the purpose of enlarging the holdings of small people living on the margin whose holdings needed enlargement as well as of congests from the scheduled areas?—If you leave it to the County Committee to deal with you would have to take into account the amount of money given by the Treasury which would not be unlimited, and you would also have the townlands through their representatives making a claim for some of the money. If there was only a small amount of money going to each there would, I think, be a good deal of wastage in consequence of the money being cut up too much. It would be cutting up the distributing body into too many units. It might work well in one county and not in another. There would be too much personal pressure put on the members of the Committee from a large number of small districts. As to the rest of the proposal, it is very much what I am suggesting.

41126. Sir Antony MacDonnell.—Did any special witness put forward what you have been outlining, my lord.

41127. Most Rev. Dr. O'Donnell.—Not the whole of it by any one witness, but the portion which I first suggested to the O'Conor Don was put before the Commission at Newry. A witness suggested that certain districts required special differential treatment, and in a county like Down they might receive that treatment through the Department and the County Committee, but not out of the funds ordinarily allocated to the county for its agriculture and its industries. It was suggested that a specal grant should be made to the county and pass through the County Committee for the benefit of small areas requiring special treatment.

41128. Sir Antony MacDonnell.—Would the administration of the fund be under the control of the Congested Districts Board?

Most Rev. Dr. O'Donnell.—No; the County Committee. That was the suggestion, and I wished to ask the O'Conor Don what he thought about it?—My objection is that you would have too many small boards all over the country administering what must necessarily be a very small fund. There would be too many applicants, and they would all insist on their representatives on the County Committee seeing that they got their share and the very small sums which would necessarily have to be given to each district would not probably do a great deal of good.

41130. Mr. Sutherland.—But there would not be any multiplication of boards, because the County Committee already exists?—Quite so.

41131. Chairman.—Would it be necessary for the money to be administered by the County Committee. Might it not be administered direct by the Department?—I don't know.

41132. Most Rev. Dr. O'Donnell.—No doubt, the Department at present in congested areas have supplemental schemes which would correspond in character with the schemes which, according to this suggestion would be promoted in the non-scheduled area, but in the carrying out of these schemes from the central office the County Committees

June 10, 1907.

The O'Conor Don.

are, it is said, consulted. How far that is done I do not know personally?—I do not think as a whole the Department's work in the poorer districts is quite as successful as that of the Congested Districts Board.

41133. Mr. KAVANAGH.—Is it your opinion that the Congested Districts Board should do the work of the Agricultural Department?—Yes, assuming that the basis of districts is maintained, because, as I have said to Lord Dudley, my own plan would be not to have districts at all, but there is so much evidence in favour of districts, and it seems to be so much assumed that there will be districts I base my opinion on the assumption that the districts will be continued.

41134. Are you in favour of the Agricultural Department going out of the congested districts altogether, and leaving all that work to the Congested Districts Board, because you think the Congested Districts Board does better for the poorer men than the county schemes?—Yes; I may say I live on the border of a congested district. One side of my estate is congested and the other is non-congested, and where the Congested Districts Board have been operating there is very considerable improvement, but I cannot see very much results from the Department's work.

41135. You think the whole bulk of the evidence tends to that effect?—For the very poor the providing of bulls, sires, and so on, may do some good, but it does not do at all as much good as the work of the Congested Districts Board. The Department cannot do all these small things as well.

41136. Sir ANTONY MACDONNELL.—Is there the same necessity for improvement in the non-congested area on the one side of your estate as in the congested area on the other side?—No, certainly not; but you will find in the non-congested area where there are very poor townlands or patches they are not benefited. I do not say there is the same necessity. In fact, it would be out of the question to do the same amount of work.

41137. CHAIRMAN.—The Department are, I think, rather altering their system so far as the poorer districts are concerned. They have, I believe, come to the conclusion that special supplementary schemes are necessary?—I believe so, but they have not done anything about our part yet, so far as I am aware.

41138. I think they have only just begun to set the schemes in motion. What is the next point?—The statutory definition is based solely on the poor law valuation, and does not take into account means of earning a livelihood other than agriculture. For instance, the districts of Rathlacken, Creevagh, Belderg, Inver, Pullathomas, and Doohooma, are all scheduled, regardless of the fact that agriculture is not the chief source of livelihood. On the other hand, there may be very congested and poor townlands which are not scheduled at all if they happen to be in the same electoral division with other rich and sparsely populated ones. The definition in the Irish Land Act, 1903, of congested estates is also defective, as it largely depends on how much mountain or bog happens to be on the estate, and takes no heed of the real poverty or condition of the inhabitants. As an example of both the above definitions, I refer to the electoral division of Cloonfower, which includes a portion of my Clonalis estate, which I have just sold to the Estates Commissioners. A great part of the electoral division of Cloonfower is in no sense congested, and yet the whole is scheduled. Again, the Clonalis estate is not a congested estate under the 1903 Act, although there are portions, particularly the townland of Cloonbonniff, which are very congested. There are a good many townlands on estates that are quite well to do, yet come under the definition of congested, because they have a very large amount of mountain or bog on them. Again, one or two big holdings will take an estate out of the definition, and that may be the very estate you want to buy as a congested estate in order to deal with these big holdings.

41139. What amendment would you suggest?—It is very difficult to get a definition to cover everything. I do not see how you can define it, but you can give more discretion and get the two definitions into line. I would be inclined to say, if the Board thought fit, any estate within the congested area.

41140. That would not mend it much?—Then I would add a portion of which is within the congested area.

41141. You object to the definition which makes the question of whether an estate can be called congested or not depend upon whether there is a certain amount of bog or mountain on that estate?—Yes.

41142. Therefore if there is a poor estate outside the congested district which the Estates Commissioners would like to buy as a congested estate it could not be considered a congested estate under the present definition unless it contained a certain amount of bog or mountain, and your view is to leave out the requirements as to bog or mountain?—Yes.

41143. How would you then define what is a congested estate?—I think there is the misapprehension, as it does not matter whether it is inside or outside a congested area.

41144. I am now assuming it is outside?—The argument would be exactly the same if it is inside.

41145. If it is inside in many cases the Congested Districts Board deal with it?—They may, of course.

41146. Take the case of an estate outside which the Estates Commissioners wish to buy?—And I suppose which in the discretion of the Estates Commissioners ought to be considered congested. Well, I think it is impossible to frame a definition which will cover every case fairly. You will have to leave it to the discretion of the Estates Commissioners, and the only point it affects is the 10 per cent. loss. If they had discretion as to whether they should incur that I think it would be much better than a hard and fast rule saying so much bog and mountain. Taking my own Clonalis estate, they could not treat that as congested, and, yet, if they had discretion I have not much doubt that they would.

41147. At present the landlord has the power to refuse to consent to his estate being considered a congested estate?—Yes.

41148. Would you be inclined to allow the landlord to retain that power?—I do not think it matters very much. I do not know any landlord who would refuse to have his estate so considered. In my particular case there is an arrangement that the Estates Commissioners should declare it as they thought fit, but they have not done it, and why I do not know. I do not wish to bind the landlords in general to this view, but my own view would be to do away with that entirely and give the Estates Commissioners the discretion to declare an estate a congested estate if they think fit. That is only my personal view.

41149. It does seem logical if you are going to entrust the Estates Commissioners with discretionary power to declare an estate a congested estate that with the bestowal of the discretionary power there should be a limit put on the possible action of the landlord?—Of course, there was a feeling some time ago, but I think it is dying out, that in order to have an estate congested the landlord would get a smaller price for it. That feeling undoubtedly existed, and for that reason a great many landlords objected.

41150. Sir ANTONY MACDONNELL.—Wasn't that the reason why the objectionable phrase, from a tenant's point of view, was introduced into the section?—Quite so.

41151. The feeling is as old as the Bill, and it was expressed in the House of Lords by whom the five words were introduced?—I do not know if the feeling now is as strong as it was.

41152. But the result is that owing to the landlords not selling lower only four estates since the Act came into force have been treated as congested. The occurrence of these five words absolutely nullified to all intents and purposes the intention of the section?—I know that the Estates Commissioners, in my own case, made a point of insisting on the landlord consenting to the estate being treated as congested.

41153. They must have the consent, but the consent never will be given if the landlord does not get his full price?—There were some communications with the Estates Commissioners and with Mr. Wyndham—I am not sure if not also with you—as to the advantages and disadvantages, and it was pointed out that the only difference was the 10 per cent.

41154. I think we are beating about the bush. The whole thing in a nut-shell is that if the Estates Commissoiners felt they could do as the Congested Districts Board do they would give the landlord the best price they could for the land but buy as cheap as they could. The occurrence of these five words in the section enabled the landlords to insist on as high

rice for the land as if the estate had not been con-ted. That is the effect of it?—Well, if that is the ct of it I think there may be some objection to it. lon't quite see that it is the effect. I think you e put the landlord's case perhaps better than I ; but I don't see how it affects that.

41155. Did I understand you to reply to Lord dley that you think these five words might advan-eously come out?—Yes, I think so, because they s sales so much they should come out, but I do not that forward as the view of all the landlords, ause I know many would not agree with that.

41156. Most Rev. Dr. O'Donnell.—It seems to be r general view, with your knowledge of the need of ieving congestion that the body charged with the ief of congestion should have responsibility for de-ing what area should be treated as a congested dis-ct or a congested area?—Yes.

41157. Sir Francis Mowatt.—Would not that au-rity be in exactly the same difficulty as the framers the Act of Parliament unless they know the lines which they are going to treat a district as con-sted?—No, because they know the country, and in e Act of Parliament you have to have a cut and dry finition that must of necessity be unsuitable in a eat many cases. Such a definition in an Act of rliament will tie up the Board and hamper them.

41158. That, of course, means a tremendous responsi-lity?—I do not think it is such a great responsibility. ey have got such a large district now, and although u are nominally largely increasing it is only nomin-ly.

41159. Chairman.—It comes to this, that in your ew, the man who knows the condition of the west of eland will make up his mind as to whether an estate owing to its condition, really congested or not, it it is very difficult for him to succeed in putting at down in black and white in the form of a defini-on?—Quite so. I would, at any rate, try and make e two definitions correspond. I would like to have e congested estates and the congested areas made to rrespond if possible. I think, having two defini-ons (although the last definition is framed with e best intentions) is very unworkable. You have, for stance, big grass farms on an otherwise congested state, but these grass farms at once uncongests it. hat is certainly not the object of the Act, and cer-ainly no one desires that an estate with big grass arms should be so treated. A very large por-ion of the scheduled areas in North Mayo are not ongested in the sense that the inhabitants are poor, nd want State assistance, either in way of enlarg-ng their holdings or otherwise. If it is decided to btain the system of scheduling districts I would sug-est that the better unit to take would be the townland, ather than the electoral division, and that in dealing vith the matter other sources of income, such as fish-ng, possibility of remunerative employment, &c., hould be taken into consideration. An official in-pection should be made by a competent person, who hould confidentially report to whatever authority is ntrusted with the power of declaring or scheduling a district, and such authority should at all times have he right to include townlands in the schedule, and also to remove them from it.

41160. Mr. Sutherland.—When would be the occa-sion on which you suggest a townland should be un-scheduled?—When the Board has done all they could o relieve it. When the work of the Board it finished, as, for instance, on the Dillon estate, I take it in the course of time, the Board will have completed their operations there. There is no object in main-taining a poor district as a scheduled congested area when you do not, or cannot, spend any more money there, or do any more good work

41161. Would there not be pressure brought to bear on the authority to keep such a district scheduled?—I think there would, but if they are cut off then the Board would not be bothered every year for a grant or something or other because they were scheduled.

41162. Would that principle of yours apply to all districts?—Yes. I take it that the Board hopes, and the Legislative hopes, that in the course of time the congested districts, or, at any rate, some of them, will be suffi-ciently relieved so as not to be considered con-gested any longer. When you have done all you can for a district then I say that district should go out because so long as you have places on the list, and are working in the district, you will be pressed to go on with the work.

41163. Mr. Kavanagh.—Do you think that agricul-tural instruction should go on even after the conges-tion has been relieved. If the Congested Districts Board took over the work of the Agricultural Depart-ment you would not exclude that district from the benefits of agricultural instruction because the con-gestion had been relieved?—Of course you would in-clude the district for that purpose, but I did not think of that. But I take it there will be a time when even that instruction in some districts might cease.

41164. Chairman.—Your idea is if the agricultural condition of the district were so improved there would be nothing then to prevent that district being handed over to the Agricultural Department and the County Committee to deal with as an ordinary non-congested district?—Yes, when it is sufficiently improved for the Department to so deal with it.

41165. At that stage you would exclude the district from the care of the Congested Districts Board?—Yes.

41166. Mr. Kavanagh.—But the Agricultural De-partment deals with large areas. Now, suppose the Dillon estate work was finished and handed over to the Department, that is a small area in the very middle of a big county, and would not your scheme be impossible?—The area is fairly substantial.

41167. But compared with the county itself, it is a small area to bring in another Board to operate upon by way of agricultural schemes along with the rest of the surrounding county?—Yes, but you have not all the surrounding county at present because you are running in and out in a most extraordinary way.

Mr. Kavanagh.—Personally I would like to rectify that, and rather treat the whole county as a whole.

41168. Most Rev. Dr. O'Donnell.—On the main point of scheduling I take it that, even while a district remains on the schedule, any body dealing with con-gestion is not bound to be always spending some money on each district?—Yes, I think so, and that is one reason why I should like to see the scheduled district very large and pretty well scattered. When dealing with comparatively small areas you will have appli-cants and more pressure put on you than if you have a great number of areas to deal with.

41169. Chairman.—What is the next point you wish to deal with?—I wish to deal with the nature of the district. A totally different state of affairs exists be-tween one truly congested district and another. A remedy that would be useful in one would be impos-sible in another. In the seaboard area near Round-stone, Kilkieran, Lettermore, Gorumna, Carraroe, &c., the position is totally different to that (say) around Swinford, or even to that in North Mayo, near Rath-lacken, Belderg, Inver, and Pullathomas. The sea is the real source of livelihood to the seaboard popula-tion in West and South-West Galway, and it would be hopeless to try migrating them to inland grass lands. They would not know how to use them, and their last state would be worse than the first; more-over no considerable proportion of the population would agree to go if they were required to surrender their existing holdings. Then as to remedies, I will take the maritime districts in South-West Galway. This is probably the worst district in Ireland. Every-thing possible should be done to increase the earning power of the population; they seem industrious and hardworking, and as long as the potato crop is good they do not complain much. Attempts by interchange of seed should be made to avoid failure of the crop; facilities for and instruction in spraying should be provided, and the people should be taught by local resident instructors to use their land to the best advantages. It is hopeless to expect any real improvement in this district from migration, and any industries there existing, such as the turf indus-try, fishing, &c., should be encouraged (*e.g.*, second pier at Costello) and the people rendered as little dependent as possible on the potato crop. Another thing that I think might usefully be done, and which is being done to a slight extent, is where estates can be bought, and I think most can and will be in course of time, is to stripe off the land and make roads. I am not now talking of big highways, but roads to enable the tenants to go more inland through the

June 10, 1907.

The O'Conor Don.

estates. At present they use the land along the seaboard for tillage for the reason that it is almost impossible to get such land further inland. None of it is good land. I am not suggesting that it is, but I am quite sure that if the tenants could work the land further inland they would do so. They would require facilities for carting seaweed. At present the holdings are cut up in a most extraordinary way, and there is practically no way of getting manure to the land.

41170. Most Rev. Dr. O'Donnell.—You think there is room for reclamation?—I think there is considerable room for reclamation inland. You will find in places where they have the facilities they have gone inland.

41171. Is there any limestone in those districts?—No; I do not think so.

41172. They get their manure from the sea?—Yes, and if they could bring the seaweed inland there is really more good land there than at the sea.

41173. Chairman.—You know more about the agricultural conditions there than I do, but is it not a fact that the shallow land lying near the sea is drier and better than the land inland?—I think there is as good land further in, but at present it is difficult of access; if the people had more facilities for manuring and working it I am quite sure they could bring it more into cultivation. I rather suspect that the land lying along the sea would go out of cultivation and would grow poor grass.

41174. But, as I have often noticed myself, that the land along the seaboard is very much drier than the land further in?—It is, but still on the hillsides further in there is a good deal of fairly dry land. Of course, it is very light land along the sea, and they do not grow many crops on it. It is only by great manuring that they get anything out of it and the labour is enormous.

41175. Mr. Sutherland.—You say the sea is the real source of livelihood for the seaboard population—do you mean it is now, or might be made that, and do you include the seaweed manure?—Of course, I am including that. If you take away the seaweed I do not know what would happen there.

41176. Chairman.—What is there in addition to the seaweed?—There is the turf, which might also be called a sea industry, as it is shipped by sea.

41177. There is no fishing?—No; there is no fishing just along there, but there is the burning of kelp.

41178. Mr. Sutherland.—Is there no fishing there?—No; the fishing is more in North Mayo, and without pretending to be an expert in the value of land, I should say that the land in North Mayo would be much better utilised down here. If you had some of the North Mayo land in South and West Connemara it would be used to greater advantage.

41179. Chairman.—Do you know that district well?—I cannot say I do.

41180. There does not appear to be much opportunity for making harbours there?—There are places where piers could be built.

41181. There does not seem to be any natural harbours?—No.

41182. The piers would not be very much use if you could not have a harbour big enough to accommodate the fishing boats?—No, except they were made at a great expenditure.

41183. If that is so how are you going to develop the fishing there?—There are places in Galway more sheltered.

41184. Do you know Spiddal and Costello?—Yes; at Costello there is an inlet which might give sufficient shelter, I think.

41185. The fishing in the inlet would not be much good. They would have to go out?—Yes, they would have to go out and would require larger boats, but I am not an expert in fishing. As to the maritime districts in North Mayo—Rathlacken, Belderg, Inver, &c., to Belmullet—in these districts, although there may be a number of very poor people, still, taken as a whole, the population is comparatively comfortable. Their houses are fairly good, and there is no evidence of the extreme poverty that exists in South-West Galway. There is, moreover, particularly round or near Kilcummin and Killala, a quantity of grass land which could, I believe, be obtained at a fair price without compulsion for the enlargement of holdings. The population is, however, accustomed to obtain its living largely from fishing, and although it might be desirable to somewhat increase the holdings, I do not think it would be at all wise so to increase them as to render agriculture their main source of income. I may say that what is really wanted in this district is new seed, and if the people could sell their seed and send to another district for a change it would be an enormous advantage.

41186. Have you noticed any improvement effected by new seed?—Oh, yes; it has been a decided advantage.

41187. Take the years when there has been a partial failure in seed, but where the seed was good, have you noticed any improvement a few years afterwards?—Yes. The potatoes seemed fairly good, but I am talking of what happens on my own property, where the distribution of seed has been free by the landlord.

41188. You have given the tenants seed?—Yes, this year I have given them seed.

41189. In previous years your father gave them seed?—Yes. He had been doing that, and I noticed that our seed always gave very much better results on the whole generally for some years after a failure, whether that was due to the fact that in the year of the failure new seed was given or what it was, it was hard to say, but a few years afterwards there was generally a great improvement. There may be two or three reasons, and I would not like to put it down to the one thing. If there is a good year then very little spraying is done next year, and if there is a series of good years spraying goes out of fashion. When there is a bad season they spray the following season.

41190. Mr. Sutherland.—Is it necessary to change the seed every year?—I should advocate every year on a small scale rather than on a big scale in one year. But it is difficult for the tenants to do that. If there was some system of getting the seed changed I think it would be an enormous advantage.

41191. Chairman.—Do you think this sort of work could be done by Parish Committees?—I think a good deal could be done by them.

41192. Don't you think Parish Committees would be a most powerful agency for doing this sort of work?—Parish Committees do an enormous amount of good work in some districts, but in other districts the Committee is more or less a failure. It all depends on the person working the Parish Committee. If you have an energetic priest working it, as you have in a great many districts, where some of them take an enormous amount of trouble over it, it will be a success. On the other hand, if you have one or two individuals who are more interested in their own affairs than making the work of the Committee a success, it won't be a success.

41193. Most Rev. Dr. O'Donnell.—What is your general observation on the work of Parish Committees?—I think as a rule they are a success, and almost invariably that is due to the parish priest.

41194. As regards the change of seed which you supplied, where did you find the seed?—From two or three places in the North-East of Ireland.

41195. Would you consider a change of seed from one part of an estate to another part of a different class of land an advantage?—It would; but this year I was wondering whether I ought to do that. I intended to give the tenants my own seed, but on account of the failure of last year I thought it safer to get seed from the North, because I would not like to give them my own seed, which might fail. I sold it in Dublin, and got new seed from the North.

41196. Do you consider that after the rains of last year the potatoes in the hands of small tenants were not suited for seeding the land?—They were not suited for seeding their wet holdings, but they might do very well in dry land. Of course, the quantity of seed I gave out was not sufficient to plant the potato crop on the whole estate, but still it was an assistance.

41197. Sir Francis Mowatt.—By new seed you do not mean a new sort of potatoes, but seed that did not come from the same ground?—Yes. I got two kinds of potatoes, but I found great difficulty in getting the tenants to take any other than Champions. But a great many people say Champions are a failure.

41198. Most Rev. Dr. O'Donnell.—I am sorry to say there are poor parts of the congested districts where the potatoes have almost failed, and there is no one to supply them with any seed in place of the very wretched immature potatoes that remain.

41199. CHAIRMAN.—I have heard it suggested that it is very often the fault of the tenants that they have bad potatoes, because instead of picking the best potatoes for seed they eat them, and keep the worst potatoes for seed?—There is a great deal of difference of opinion as to what is the best potato for seed. Some people take the big potatoes, others the small potatoes, and others the medium size. I think they should not slit them, but put them down whole and sprout them. Sprouting should be encouraged. I have tried it as an experiment myself, and I know it has an enormous effect on the yield and the date of the yield. You can put the potatoes down later, and they come up much quicker.

41200. What do you mean by sprouting?—Putting the potatoes in boxes and allowing the sprouts to grow out before they are put into the ground.

41201. Sir ANTONY MACDONNELL.—Do you pack them in clay?—No. They are dry, and we pile the boxes against the wall in an empty room and leave them there. Then they sprout. They can be planted a good deal later and will come up much earlier than if planted in the ordinary way.

41202. When in the boxes do the potatoes sprout in exactly the same way as if planted in the soil?—Yes, and you can make them sprout quickly or slowly.

41203. You are starting them to grow under more favoured conditions than if in the soil?—Yes. What caused us to try this was, my father and I had an interview with Professor Campbell, and he suggested that we should try this. We did so, and as it was very successful, we continued it.

41204. Sir FRANCIS MOWATT.—That will have another advantage, that you can get rid of the potatoes that do not show signs of strength?—Yes; reject them altogether, which is a most important thing. But one of the chief advantages of this system is that in the boxes only one shoot will come. It is only the strongest shoot that will appear, and when planted you then have the whole strength of the potato centred in it. The country people usually cut the potatoes in two or three parts to make seed out of them and the result is that they reduce the strength of the potatoes. In sprouting the best potatoes are not the very large but the medium-sized ones, but the country people like the potatoes for seed to be as large as possible.

41205. Most Rev. Dr. O'DONNELL.—Are you very much affected by the late frosts?—Not materially this year. There was a little damage done to some early potatoes, but wet affects us more.

41206. Mr. KAVANAGH.—Does the potato blight affect the sprouted potatoes?—It does, but it is less affected than the others on account of their being more advanced when put into the ground. We have tried the sprouting for two or three years, and this year I am having two or three special plots carefully laid out under conditions as similar as possible so as to observe the actual difference in the return. There is no doubt that the return by sprouting is larger, but I want also to see whether it is useful for early and late planting. If it is good for late planting, that would suit the country people, who are late in planting.

41207. Mr. SUTHERLAND.—The season is short, and they must make the most of it?—Yes, and I think this might help them in that way, but it is difficult.

41208. Have you made any experiments with cut potatoes?—No.

41209. CHAIRMAN.—You have been dealing with North Mayo?—Yes; and I may say that in that district there is a very large quantity of grass land, and from a conversation I had with a land agent I do not think there would be much difficulty in getting a good deal of that land for the purpose of increasing the holdings. There is not an enormous number of holdings that would require increasing, but there are some. But I doubt very much whether it would be desirable, where there is a fishing village, to turn that village into a purely agricultural one. If it is desirable to increase their holdings I would increase them to such an extent as to make them live more comfortably as fishermen.

41210. Most Rev. Dr. O'DONNELL.—These people to whom you refer would not be engaged in fishing all the year round?—No.

41211. You do not contemplate their following the fish from one sea to another, and while not engaged in fishing you would like to see them and their families with as much land as would occupy them?—Yes.

41212. To provide vegetables and milk for the family?—I am afraid in the West of Ireland they do not do much in the way of growing vegetables, except cabbage.

41213. Are you aware that the Congested Districts Board bought several small estates in that district?—Yes, and I should fancy if they wanted they could buy more.

41214. Do you consider these estates should be kept in hands until well improved before the sale takes place to the tenant?—I think so, within reason. My point is that I would not try to make agriculture exclude fishing. You have got an industry there which is working very well, and while their spare time could be occupied with agriculture I would not make them agriculturalists pure and simple.

41215. You would not desire to draw anyone from fishing to agriculture?—No.

41216. There is too little land?—Yes; besides I do not know if the land would be a better means of livelihood than fishing.

41217. But isn't there a population in the district pretty far removed from the fishing?—Yes; but it is not a very thickly populated district at all.

41218. But for that population outside the fishing such holdings would enable them to live by the land?—Yes, but I do not think it would be altogether desirable to kill them going away for labour. That brings a good deal of money into the country.

41219. You do not think that is a bad thing so long as there is fair permanence in the labour to which they resort that they should now and then go away for labour?—Yes; even the gentry have to send some of their sons away. We cannot always live at home there, and although I would increase the holdings I would not say there must be an increase because some of the people have to go away for labour.

41220. Sir ANTONY MACDONNELL.—You mentioned that large tracts of grass land could be obtained. Are you aware of the fact that the Estates Commissioners addressed a very considerable number of holders of grass lands in the locality, and asked them to allow a preliminary inspection of these untenanted lands to be made with a view to purchase, and that out of the thirteen owners applied to not one consented to an inspection being made or consented to entertain any proposal for the purchase of their land?—I can quite understand that, and I would say it is in no way inconsistent with my view, because of the trouble of selling to the Estates Commissioners, of which I have experience. Landlords rightly or wrongly are afraid of an inspection, because if there is an inspection, and you do not agree with the terms of the Commissioners a great deal of trouble may result.

41221. Do you expect that Government funds will be advanced without inspection?—Oh, no; but I say at present landlords think the Estates Commissioners are trying to get the land below value, and they rightly or wrongly greatly distrust the Estates Commissioners. They feel it is better to sit quiet for the present. I know a great many agents, and I am quite sure that they would be perfectly satisfied if they got a reasonable price for the lands.

41222. How is a reasonable price to be arrived at unless the purchaser is allowed to ascertain what price he will give?—Quite so, but as I said, what they feel is that when a circular of this kind is sent out—for that is what it was—it is felt that they don't know what trouble the Commissioners are going to make down here.

41223. CHAIRMAN.—What circular is this that you are referring to?—The circular that was sent—I call it a circular—it was a communication sent to a very large number of owners not only in our district, but in other districts, asking for permission to inspect. I might add, to my knowledge, a certain number of owners have actually applied to the Commissioners for an inspection, and although the Commissioners sent out circulars asking for leave to inspect where they had not been asked, yet where they have been asked, they are not even sending an inspector down.

41224. Sir ANTONY MACDONNELL.—I will make a note of that and ascertain how far the information which has reached you is accurate, but I think we may take it as certain that in the tracts, especially in Killala tract which you mention, a large number of owners have been applied to for permission to inspect their estates with a view to

June 10. 1907.

The O'Conor Don.

purchase, and that permission to inspect has not been allowed?—Quite so.

41225. Now, I ask you, how are the Estates Commissioners to get into close touch with owners if inspection is not allowed?—I think that just at the present moment the owners feel, and for a little time past have felt, "We had better sit quiet and do nothing, because if we allow inspection and we don't agree as to terms, we will be in difficulties."

41226. CHAIRMAN.—In other words, they don't wish to sell?—Some of them are perfectly willing to sell, but they don't wish to run the risk of failure, and then all the trouble that follows on that.

41227. If, according to your own words, they wish to sit quiet and not allow inspection, how do they want to sell?—They will sell later on if things quiet down.

41228. But at present they don't wish to sell?—They are quite willing to sell if the can get what they consider a fair price; but they say they know the Estates Commissioners won't give them a fair price, and they are not going to run the risk of having all the trouble that ensues when there is a failure.

41229. You mean to say that they, having made up their minds that the Estates Commissioners' price will not be a fair price, are not willing at this moment to enter into communication with the Estates Commissioners for sale?—To some extent, though I think with a little discretion that could be managed.

41230. Sir ANTONY MACDONNELL.—Is not that feeling which you say exists in regard to the properties mentioned largely entertained in Roscommon and Galway and elsewhere in regard to grass lands?—Quite so.

41231. Would you not say that that feeling, and the failure of the landlords to co-operate with the Government in the sale and distribution of these grass lands is creating a very bad effect in the country?—You could put it perhaps the other way.

41232. In substance that is the result?—No, because what I say is that the Government say—"We want this thing." They send down a man. I have had some correspondence sent to me. It is not a case I know very much about; but I have had official copies of correspondence sent to me, which will show the risk the landlords run in this. I don't say it is the fault of the Commissioners, but if they were in a position to deal more reasonably with the landlords in the matter, landlords would come in, and what the landlords naturally say is—That is not our failure; it is the failure of the Commissioners or of the Government. If we offer this land and it is rejected we know the consequences. If we offer it and it is accepted there will be enormous delay in getting paid. There will be all kinds of trouble over it and so on. If the Government were in a position to say—"We will pay you cash down" it would be a very different story of course, but at present it may take three years. I have got here the correspondence in the Burton Persse estate, where the landlord offered the townland. They agreed provisionally to take it; they agreed to inspect it; there was not any difficulty about price. After something over two years they came to the conclusion that it was unsuitable, and the man practically lost the use of the land in the interval.

41233. I shall be able to place a very different complexion on that matter; but may I keep you to the point that I want to bring out; it is this—that it was the original proposal and intention of the Land Purchase Act that these grazing lands should be acquired on a large scale for the purpose of the relief of congestion and the enlargement of uneconomic holdings. The Government is anxious to push that policy and anxious to acquire these lands on a large scale. The Estates Commissioners apply for permission to inspect, in order that they may offer a reasonable price for the purchase of these lands; the landlord refuses to allow an inspection. Consequently they cannot get into touch with them. The result is a strong feeling is created throughout the country, with the result which we are aware of. Is not the responsibility of that largely on the shoulders of the landlords, and is not the case made out for compulsory purchase if that policy is persisted in?—If your premises could be accepted—possibly; but what the landlords would say is—they would put it in this way—the policy was to get these grass lands; the Land Commission have adopted a policy, rightly or wrongly, of not giving a proper price, and of huge delay, and it is on their shoulders that the blame for the trouble should lie. If we knew they would deal fairly with us—if we knew when we agreed to sell that we would be paid in the reasonable time that the Act seemed to contemplate, it would be different. The Act, in fact, laid blame on a landlord who could not complete within a year. So far from completing within a year, the other side don't complete within two or three years. At present there is something like £35,000,000 worth of property before us which won't be completed for a great many years, and we say—"With all these difficulties in our way you cannot expect us to run the enormous risk of fixing too low a price or being delayed an enormously long time before we get paid."

41234. We have been talking to you as the representative of the Landlords' Convention—what is your reason for saying you are offered too low a price. Can you produce instances in which negotiations have fallen through because the Estates Commissioners have offered too low a price. If you are not prepared with instances to-day, perhaps you may be able to give them to-morrow?—I will try to get you some instances.

41235. Because I want to bring to the test the grounds and reasons the landlords have for refusing even the power of inspection to the Commissioners. I want to put it prominently forward that the Estates Commissioners are anxious to push this policy of the purchase of these grass lands, and they are prevented from carrying out that policy by the resistance of the landlords and the landlords' refusal to allow inspection to be made with that object?—There is a very great difficulty in putting before you the instances, because, as you yourself must know, if I gave you the cases where the landlords consider the price too low there would be trouble on these properties.

41236. That is possible—I will make every allowance for that; but you could give the Commission such information as to unreasonable time to see whether the evil or the difficulty can be removed?—I think myself if you could remove the delay, you would have removed a very large portion of the difficulty.

41237. CHAIRMAN.—Perhaps you could give us some information on the lines required, privately, and not for publication.

41238. Sir ANTONY MACDONNELL.—Does the same objection which the landlords seem to have dealing with the Estates Commissioners obtain as regards dealing with the Congested Districts Board?—I don't know. I think Mr. Fitzgibbon from Castlerea expressed the same view, only from the opposite side. It seems in one district landlords think the Congested Districts Board the best, and in another they will think the Estates Commissioners, and *vice versa*.

41239. Don't you see it is desirable in the interests of the peace and well-being of the county that we should come to close grips on this question of the purchase of the grass lands?—I quite see that.

41240. If you won't come to it by an amicable arrangement, and you see it is necessary to acquire the grass lands, then the case for compulsion is made out?—I don't know I would go as far as admitting that, but still it goes a long way.

41241. The grass lands have to be bought or acquired?—My case is that there are grass lands available. I have grass lands which I have offered to the Commissioners at their own price, as you know.

41242. I know; but I don't like to get into personal matters. But I am aware of the facts, which from the Commissioners' point of view would be a reason why they did not close with you upon that occasion. I don't want to enter into that, but I want to come to the broad question of the acquisition on a large scale of these grass lands which are desirable in the interests of the relief of congestion and the enlargements of uneconomic holdings, as well as the general pacification of the country?—Of course, the two things are really connected.

41243. One is the consequence of the other?—To some extent that is so.

41244. If you won't come to terms with the Estates Commissioners are you prepared to allow the Congested Districts Board to inspect and make offers?—I think a good many of the landlords, rightly or wrongly, would be under the impression that difficulties are put in the way of the Congested Districts Board.

41245. We must do it in one way or the other. If
n don't allow the Estates Commissioners to ap-
ach you, we want to have the Congested Districts
oard to approach you. If you will not have any-
ing to say to either we want to compel you to sell—
e alternative is compulsion—I want to make that
rfectly clear?—If I could tell a certain number of
ndlords who have spoken to me that they would be
irly dealt with, and that they would be treated with
once and paid without delay, I have not much
ubt that I could get a very considerable amount of
ass land offered to you straight off.

41246. How many thousand acres?—It is hard to
ll you straight off. I could get you many thousand
res in a week, I should say.

41247. Forty thousand acres?—I daresay, but not
a week, but in a period of time; it would take
me negotiation.

41248. Can you get me a list of those 40,000 acres
hose owners would be prepared to sell on fair terms
eir grass lands in Roscommon and Mayo?—I could
ot give you a list without their consent.

41249. Of course not, but we want to know clearly
ne landlords who would sell?—I daresay I could.

41250. These are the landlords who are prepared
sell?—I could not give you that list for publica-
on.

41251. Certainly not, but merely for private infor-
ation, that we might know?—Of course, you asked
e here 40,000 acres; it is a rough shot, I may say.
tried myself to see how much one thought one could
ut together as the result of a conversation I had
ith you the other day. I came to the conclusion
at something like that figure could be got in Ros-
mmon and Mayo.

41252. Sir Francis Mowatt.—Let me ask you this,
illustration of what you have been saying. There
no necessity for compulsion if the landlords could
e got to believe they would be likely to be treated
irly; that really means a question of price?—Of
rice and speed. I may say I perhaps differ from
me of them in the view that I take—that speed is
lmost as important as price. You must remember
at a very large number of landlords are not unen-
mbered, and delay is almost fatal to them—I mean
aving the purchase money so long kept back.

41253. What they really fear is that the price of-
red will not be such as they could accept, and that
ven if they could accept it the delay which experience
as shown to exist would make it a bargain that they
annot face?—Yes, and, of course, there is this also;
is not only delay in carrying through but delay in
tting a contract, because what the Estates Commis-
oners generally do—and I know more about dealing
ith the Estates Commissioners than with the Con-
sted Districts Board—is to provisionally agree.
hey don't bind themselves, and the thing goes on
ntil the very last moment with merely a provisional
greement.

41254. Sir Antony MacDonnell.—An agreement
s to the definition of an estate?—Yes, and a kind
f understanding as to price, and on that I may take
y own case. They had a provisional agreement that
hey were to buy some 400 acres of grass land; the
rass land was land they inspected and approved of;
here it is (*map produced*), cut up and settled to
ake, and there was no binding agreement.

41255. Sir Francis Mowatt.—On either side?—
o, but we would have liked a binding agreement.
Ve had put in the originating application; there
as a letter that the price for the grass land was
ubject to the sale going through. The sale went
hrough. Here is the plan of the grass land; they
ame and divided the grass land up; it is all plotted
it into holdings, and so on. They said—"We are
ry sorry, we must exclude that" (*indicates*);
we will take all this." This is where I own some
ore land here (*indicates*); I have a demesne here.
We value this at so much; we deduct this from the
ss purchase price, and we will give you back this
atch of land because it won't suit us."

Sir Antony MacDonnell.—That is——

Chairman.—Are we to go into this question——

41257. Sir Antony MacDonnell.—It is anticipat-
ng, but the O'Conor Don has mentioned it, and as
e mentioned it rather in disparagement——?—No;
am not talking of any personal matters referring
o the Commissioners.

41258. I quite understand that; but it is fair to say on behalf of the Commissioners the reason why they gave back that farm was that it was a wet swamp which nobody would buy from the Commissioners at any price?—With regard to that, I am perfectly willing that when the Commission is down at Roscommon—and I will afford them facilities for doing so—to take them over the property and the so-called swamp. I should like them also to see their own inspector's report on it. I have seen the report. The report is this—"The land is very suitable for the enlargement of holdings." There is not a word about a wet swamp in the report. Mr. Finucane did say to me that he thought somebody had reported that it was a wet swamp, and he looked at the file in my presence, but instead of that it was reported the other way.

41259. All I want to say is the Commissioners when they buy property must have regard to the immediate circumstances, and if they cannot re-sell it, they are not allowed to accept it. In a congested estate they must regard the possibility of recouping themselves for the money they pay out. When they find they cannot re-sell any particular property they are precluded from buying it?—Quite so; and that is what I say is one of the difficulties in dealing with them. I am only putting this as an example of the difficulties in dealing with this matter. If the State wants to get grass lands the State must run the risk. No landlord will like to offer grass land on the terms that "We will take this and give back that." I do not want to sell myself.

41260. Chairman.—What risk must the State take?—The risk of not being able to re-sell. The real reason for their giving back this bit was that they could not get a tenant for it. There was no other reason at all. This is not land they agreed to buy without an inspection. They had two inspections before they made this offer for this place with the wet swamp or whatever you like to call it. I have got the figures of the two inspectors; they differ by about £20.

41261. Sir Antony MacDonnell.—They could not get a tenant to take it?—Yes, because they had a large quantity of better land elsewhere, and I suggested to them that I might get them a tenant, but I have not had an answer to that. I might also point out this—having gone into this matter, it would be well to go right through it—portion of this grass land which has been taken, and which is some of the best portion according to the valuation, has been in fact divided by them between the two local publicans, both men in a large way of business. I don't wish to say a word against either of these two people, because they are both very industrious, well-to-do, hard-working men, men who have land to the value of £50 a year each, I believe.

41262. Most Rev. Dr. O'Donnell.—Do you say the best land available for division was divided between two local publicans?—I don't say the best land available for division but some of the best land according to the inspector's report.

41263. Sir Francis Mowatt.—What extent of acreage?—Here is the piece (*indicates on plan*). Nos. 11 and 12 to one and 13 and 14 to the other. There are about 300 acres in the whole square.

41264. Most Rev. Dr. O'Donnell.—Would you be of opinion in reference to the 40,000 acres which you consider may be offered, that in the present state of the country, and in view of the needs of the population, it would be very desirable if the Congested Districts Board had expeditiously made available for it as much of that land as it requires for the enlargement of small holdings?—I think it would. I lay emphasis on the word "and," and "the present state of the country," because I think that that is what requires this to be done rather more quickly than would be desirable, for the needs of the population. I think that for the needs of the population great speed is undesirable.

41265. I quite understand that the pace cannot be a very fast one, but you allow both conditions; and the needs of the population are there, and the state of the country demands pretty prompt attention to those needs?—Yes, but I think if this agitation was not going on, for the needs of the country it could be much better done rather more slowly than will probably be necessary to satisfy the demand.

41266. I appreciate your point that migration and the enlargement of holdings to be done in the best

June 10, 1907.

The O'Conor Don.

way require time?—Yes; you are bound to make mistakes if you rush at it, as it probably will be done, and perhaps necessarily must be done, there will be huge mistakes made.

41267. But take it that the body dealing with congestion demands for itself a reasonable amount of time. Assuming that, all the same, would not it be necessary before it starts operations that it should be in possession of a large quantity of grass land, so that it can survey what is sufficient to relieve congestion pretty much as a whole in a district, though not in detail?—I think you will find it very hard to do that. Do you mean that in your opinion it would be necessary there should be actually sold large tracts of grass land, or does it meet your view that there should be power to purchase when required large tracts?

41268. I mean both; I mean there should be power to purchase, and that for economically dealing with the problem, the body dealing with the problem should have the grass lands in readiness before it acquires the highly congested estates?—Perhaps without directly answering your question, I may express my own view that the best way is to get grass lands, and use them in the very profitable way that Mr. Doran has shown they can be used, and then fill them up gradually as you get estates.

41269. The facts being such don't you consider that it is very regrettable that the Congested Districts Board at the present moment is absolutely debarred from negotiating for the land which it requires for the relief of congestion in the country?—Certainly.

41270. Are you aware that for want of sufficient funds to promote migration and enlargement of holdings pending the sessions of this Commission at this very critical time the Congested Districts Board is very much hampered in negotiations for estates?—I understood that for some reason or another there was something preventing the Congested Districts Board from negotiating, and that they were not in fact negotiating for lands.

41271. Have you heard that they agreed to a self-denying ordinance, limiting the purchases within a certain figure, and that they feel it extremely difficult to meet the reasonable demands of the congested population, and keep to that understanding?—I had heard something of the kind, but it rather shows by the figure being too small—as I believe it is—that it is the money and not that land that is not there.

41272. I am dealing with the money for the moment; do you not think at this critical time, it is a great pity that from the Treasury or the Government there should be any obstacle interposed to prevent the Congested Districts Board from exercising such powers as it has to purchase land for the relief of congestion?—Most undoubtedly.

41273. Do you think adequate funds should be provided to enable it to discharge that function?—Certainly, and I think that if adequate funds were provided, that quick purchase, which the Congested Districts Board have the reputation of carrying through—that is one reason I know a lot of landlords prefer the Congested Districts Board—I think you would have much more sales of grass lands.

41274. Make this case: suppose in dealing with this problem the Congested Districts Board is not able to acquire voluntarily all the land it needs, don't you think there is a case for compulsion?—It all depends on the word "needs"; I say you can acquire all you need acquire, all you like, at a fair price.

41275. Suppose a body is constituted like the Congested Districts Board to acquire land for the enlargement of holdings and the migration of small tenants, and that body maturely decides that voluntarily it is unable to acquire a sufficient quantity of land for the purpose for which it is instituted, do you not think that there is a case for compulsion?—No.

41276. Why not?—Because that body may wrongly decide it is not able to acquire, and may wrongly decide on the quantity that is wanted.

41277. Who would set it right?—I think whatever body is carrying through the matter must see what the Congested Districts Board decides; but what are the facts; that the land can be acquired at the price, and the second is the land wanted. I think if you find that the Congested Districts Board—I don't say for a moment that the Congested Districts Board are doing this—but if you find the Congested Districts Board saying they want a large quantity of land, but yet unable to divide the land they had in hand I should say then there would be no case at all for compulsion.

41278. Take it the other way: suppose the body charged with the problem of solving the difficulty of congestion makes reasonable progress with its work and gives general satisfaction?—I think it has.

41279. And that with their using every inducement to move owners to voluntary agreement as regards purchase, now and then they would be confronted with an unreasonable man who would hold out and insist on two prices, rather than part with some little bit of land which was speciable serviceable for the relief of congestion, would not you consider that the body ought to have compulsory powers in such a case?—Of course, a special bit of land is a very different thing from dealing with the whole country; but even as regards that, if there is plenty of other land available without this, why not do it elsewhere, if you can get it. I say you can get it elsewhere, but what I object to very much on behalf of the landlords would be that you could pick out special bits. I may say I have felt that myself—the Estates Commissioners saying to me, "We are going to have that, but this piece we are going to leave you, and we are not going to give you any fair compensation for severance or anything of that kind." I think that would be grossly unfair to the landlord.

41280. CHAIRMAN.—Would not your point be met in the case of compulsion the purchasing authority was obliged to buy the whole of the estate. I can quite understand your objection to a purchasing authority coming down and compulsorily acquiring the plums of your property and leaving you the worst bits?—That is what they have done with me, so perhaps I feel it a little more.

41281. If that danger was removed, and if it was a question of selling not at all or *in toto*?—I am opposed to compulsion, but I say if you are going to take you should take it all. When I say *in toto* I mean exclusive of demesne.

41282. Obviously; that is what I mean by *in toto*?—Take a comparatively small owner. Take the case Dr. O'Donnell put to me, where a man might have a bit of land and the Congested Districts Board might say "We would very much like that bit of nice suitable land, so we will take it." There might be another owner here with plenty more that would do, and I say there is no case for compulsion made out merely because that man says, "I don't want to sell." You must make out before you can establish a case for compulsion that owners as a whole won't sell what is reasonably necessary and not that there are one or two people who have little bits here and there who won't sell.

41283. Is not what you have just said an argument in favour of some court of appeal rather than an argument against the application of the principle of compulsion?—No. Dr. O'Donnell put to me the case "Suppose we find an owner who won't sell a particular bit that we think very suitable to acquire is it then a case for compulsion established in regard to him"? I say no, because to establish a case for compulsion you must establish first the necessity for getting this large quantity of grass land; and second the fact that taken as a whole you cannot get it. If individual owners won't give small pieces here and there that won't justify you in applying compulsion generally. Of course the real object of the demand for compulsion is to get the land cheaper.

Sir ANTONY MACDONNELL.—Rather to get it at all when the owner says that he won't sell.

41284. Sir FRANCIS MOWATT.—Do you go as far as this: assuming that a certain amount of land is essential for the enlargement of small holdings, and assuming that it is found impossible to acquire that land at a fair price, broadly, do you then, those two premises being granted, admit that compulsion is justifiable; you have the necessity for the land and the willingness to acquire it at a fair price; if that land is necessary and it is found impossible to acquire it at a fair price, then under those extreme conditions are you prepared to say that compulsion becomes necessary?—I should have thought that the premises as put to me involve the answer "Yes," because the word "necessary" implies the whole case.

41285. Exactly?—If there is a necessity for compulsion it must be necessary. That is what it amounts

but what I say is that there is no necessity as you acquire at a fair price such a very large quantity.

1286. Most Rev. Dr. O'Donnell.—Suppose you e a member of the Congested Districts Board rged with the work of relieving congestion, and were confronted with the fact that in Roscommon owners do not display great willingness to sell, ld you consider that there was a case for compul-n?—Not necessarily.

1287. What would your remedy be?—To see what true value of the land was, and whether I could rd to give it, and if I could afford to give it I ld try to get it from the landlord.

1288. Suppose they don't sell?—That is supposing tate of circumstances that, in my opinion, does exist.

1289. Mr. Kavanagh.—Is your objection to com-sion a matter of price or of principle?—It is a tter of principle in this sense. I object to com-sion when there is no case to justify it. I don't w what the landlords as a whole may say—I per-ally would admit it if there were a great public d; just the same as in the case of railways, it is r enough then to take land for the public need.

1290. You would say that compulsion would only pe in where the voluntary system breaks down?—t necessarily when it breaks down, because it may ak down without anything to justify compulsion. r instance, the Estates Commissioners, under the sent Act, may not be permitted to give the value the land.

1291. Sir Antony MacDonnell.—Why?—Because y are only permitted to give such price as they can sonably secure when they cut it up into small dings. Assume, for the sake of argument, that this property the land is worth £20 an acre as part a grass farm, if you cut it up it may be only worth 0 an acre, yet in that case £20 would be a fair ce.

Sir Antony MacDonnell.—But it is obviously unjustifiable assumption to say that the land uld be reduced from £20 to £10 an acre. We ve had a great deal of evidence as to the value of ass farms and tillage farms, and also a great deal evidence as to the insecurity of grazing rents. The estion is really as regards dealing in the matter ether or not the Estates Commissioners can get per cent. interest on the sums which they pay out m the date of the agreement. It comes to that.

1293. Mr. Kavanagh.—You say that when there is more land that you can buy by the voluntary tem and that the voluntary system has broken down n then see the necessity for compulsion?—I don't mit for a moment that there is no more that you n buy.

1294. I thought you said that when such a thing l occur there would be a case for compulsion. As-me for a moment that the voluntary system has oken down and that the land is required for the rpose of migration, would not you then admit the cessity for compulsion?—I think I admitted that to r Francis Mowatt, that if there was a necessity for mpulsion there would be a necessity. That state of airs not only does not exist, but I believe never will ist.

1295. I can understand an objection to an inspec-n by the Estates Commissioners that would stereo-pe the price in case of difference. But have you r known a case in which the landlord has agreed inspection, and that they have not been able to ree to a price fixed by the Estates Commissioners?—know of some cases where there has been inspection d the thing has failed.

1296. Have you ever known a case in which they ve come to terms?—Yes.

1297. Several?—My own.

1298. The case in which they have not agreed is exception?—I think it is, because I think the only ple who have allowed inspection—I may be wrong out this—were the people who were very anxious to l at any price.

1299. Quite apart from the question of grass lands, you think that it is quite right to say that the sent situation in the West of Ireland is due to e landlords refusing inspection?—No.

1300. It has been suggested that it is so?—With gard to Sir Antony's point as to grass land and llage. I propose to deal with that later on.

1301. Sir Antony MacDonnell.—With regard to e Burton Persse case, which is cognate to what has been said, I want to point out that the facts are these. In one case, in the Burton Persse matter, the estate was taken over within three months——

Chairman.—The Burton Persse case was only raised in a reference, but the figures were not gone into.

1302. Sir Antony MacDonnell.—All I wish to say is, that if he does go into figures there is an adequate explanation. The only other case is that regarding the two publicans, which has been quoted. The explanation is that all the other tenants on the estate refused to take the particular lands, and that the Estates Commissioners had to finish up the matter and gave this land to these two men?—I quite admit that explanation. I was going to deal with it more fully. What I was going to say was: here is a large quantity of specially selected grass land. I quote this as an instance of where the landlord submits to inspection. He has part of the land thrown back on his hands, and the plums taken. I say if there is such a great demand for the enlargement of holdings why give it to these two men at all? There were plenty of other people on other estates whom you could have transplanted to this large field that was divided between the two publicans, two very deserving men; I don't want to say a word against them, but they were not special objects of sympathy from the State.

1303. The answer is that the Estates Commissioners are not agents for migration?—I thought they were. I thought they had two or three estates on hands on which they wanted to buy grass lands. In fact I thought you were sitting to consider whether they should have compulsory powers for getting grass lands.

1304. They cannot bring in outsiders. It is not part of their business?—They are, in fact, doing so to my knowledge from other estates, and they could have brought them to these grass lands. What is this Commission sitting for but to determine whether they should get compulsory powers to buy grass lands and divide them among tenants?

1305. The Congested Districts Board. You are now talking about the Estates Commissioners. We are not dealing with the Estates Commissioners at all?—I thought there was a question here as to whether even the Congested Districts Board would not be done away with. If so, would not the Estates Commissioners have power to get grass lands compulsorily, assuming you report that way?

1306. That is a different matter. That is for the Chairman?—I should have thought that the point was whether compulsory powers should be given or not. What I say is: here is grass land available, grass land that they have themselves selected and that they value at about the highest on the whole farm, and they have a number of tenants from all parts of the country whom they cannot provide with economic holdings. Here is a field on which they could have put down at least one or two holdings.

1307. Most Rev. Dr. O'Donnell.—Does not that fully illustrate the difficulty of dealing with the thing piecemeal. If any authority, the Congested Districts Board or the Estates Commissioners, had not two farms, but had a great area of land instead it might easily have got men to occupy these holdings without having recourse to the publicans as occupiers, but it is not so easy when you have only two farms to dispose of?—As a matter of fact the Estates Commissioners had at some distance from here a very large tract of country, and their action is described by what one countryman said to me. I asked where was Mr. So-and-So. He said, "Out there trying to coax tenants to go." He spent many days trying to coax some of my tenants to go to it; so they really had plenty to deal with. They had a large number of estates on hands which they could have transplanted the tenants on to.

1308. Mr. Sutherland.—You admit that under certain conditions compulsion might be necessary, but your point is that the necessity has not arisen because you say that it could be arranged voluntarily with the landlords to get all the land that is necessary: is that your position?—Yes, and because I say they have got as much as they can really deal with at present properly.

1309. That is for them to judge?—I don't agree with that.

1310. You say that plenty of land could be got; therefore the necessity does not arise. It is all after

June 19, 1907.

The O'Conor Don.

that a question of conditions. What are the conditions; is your position that the landlords are perfectly ready to give up these grass lands provided that they get their own price?—Yes, but I won't say every landlord. I only say the landlords as a whole.

41311. Sir ANTONY MACDONNELL.—I am not sure that the O'Conor Don understands the reply which he has given: the landlords are prepared to sell if they get their own price; not otherwise?—I did not say not otherwise. I said at a fair price.

41312. Mr. SUTHERLAND.—Who is to fix the fair price?—I will deal with price later on.

41313. This is of the essence of the whole question?—I am quite willing to go into it now if you wish.

41314. CHAIRMAN.—This question does touch what we originally started from. We have had a very long discussion on a great many subjects, but where we started from was a paragraph in your memorandum: "There is moreover, particularly round or near Kilcummin and Killala, a quantity of grass land which could I believe be obtained at a fair price without compulsion, for the enlargement of holdings." That is where we started from, and Mr Sutherland's question as to what you would call a fair price is rather opportune?—Yes. I would rather deal with all together later on, but I am quite willing to go into the question now.

41315. Mr. SUTHERLAND.—The question is that the machinery called the Estates Commissioners was created for the express purpose of dealing with these matters?—Here you have a vendor and a purchaser.

41316. The vendor is an interested party, and the purchaser is a totally disinterested party?—By no means so, and I think when Mr. Boyd was being examined Sir Antony interjected that he would not suggest that the Estates Commissioners were the proper parties in the case of compulsion to fix the price as they would be the purchasers.

Sir ANTONY MACDONNELL.—Not finally to fix the price. There should be a court of reference for disputed cases.

41317. Mr. SUTHERLAND.—I am quite willing to accept that statement of the case?—You have vendor and purchaser at present, and they cannot agree. That is what is said.

41318. I really have a difficulty in accepting the identity of position in this case with that of a purchaser and vendor, because you cannot put them on the same platform?—A vendor in the ordinary sense; a purchaser in the restricted sense that he is bound to see that there is at least sufficient security. He cannot give even what he might think the fair value if he thought there was a risk, and they take actually 15 per cent. off in practice for that risk.

41319. Mr. KAVANAGH.—Would you call him a middleman? He has to re-sell?—He is a purchaser, and a purchaser without a free hand, and therefore cannot give as much as an ordinary purchaser.

41320. Mr. SUTHERLAND.—But without any personal pecuniary interest whatsoever?—No doubt.

41321. CHAIRMAN.—In answer to the Bishop you said that if you were on the Congested Districts Board what you would do would be to see what would be the true value of the land, and then consider if you could afford to give it?—Yes.

41322. If that be so, how would you set about seeing what the true value of the land is?—Where it is let and has been let for many years on the grazing system, you have got the true value pretty clearly fixed.

41323. Without going into details now, am I to understand that you would arrive at the true value by some process other than inspection?—I don't say that if I was on the Congested Districts Board I should not require inspection as well, because there might be frauds.

41324. You would require inspection?—If I was on the Congested Districts Board.

41325. Is it, in your opinion, possible for any purchasing body to arrive at a proper appreciation of what the true value of land is by any system however good without ultimately also inspecting?—I think even with inspection, very often it would be impossible to arrive at true value.

41326. But inspection must be a necessary part of the conclusion as to what is true value?—I see a difficulty about inspection. We have had it from time to time in the Land Courts. One inspector says one thing and one another. What I say is that the strongest evidence of the true value, assuming you get correct figures, is what A has been paying for the past twenty years for his land, and has been making a living out of it.

41327. Do you believe that the purchasing authority can conscientiously perform its duties in that way?—I would have this inspected as well.

41328. However much they may be supplied with data as to rent, prices, and other things, could they reasonably conclude a purchase without having looked at what they are going to buy?—No.

41329. It is not reasonable to ask it?—No. I am not suggesting it.

41330. If that is so, and if inspection is necessary, how can they arrive at the true value of the land to be sold if inspection is refused?—They cannot, but they could do this. They could say, "we will, subject to inspection, give you so much for this grazing land."

41331. That is fixing the true value before they have seen it?—When land is let on the eleven months' system, you have a clear indication of its value, and you can arrive at its value assuming that there is no fraud of any kind.

41332. Surely your own method would not be satisfactory. You say they could offer a certain price subject to inspection; in other words, what does that mean? Subject to inspection showing that the thing is worth what you think it is worth?—Yes.

41333. Suppose they did that, and they went down and found on inspection that it was not worth what they had thought it was worth, and they did not give you the price previously agreed on, all the objections you would have to inspection would apply equally, and the tenants would know that on inspection the place was not considered worth the amount agreed on beforehand?—Yes, but I think you would find that these cases would not be so very many; but I may say I do think that they are quite right in having inspection at the very start, and that it is the only way of getting at it, but what is preventing the landlords from allowing inspection is that they think that as a whole they are not being given sufficient, and that there is too much delay, and so they say, "we are not going to run this risk."

41334. You mean financial delay?—Yes.

41335. That is not the fault of the Estates Commissioners—is it?—I think it is every fault of theirs.

41336. They have not got the money; it is a question that the Treasury chest is not full enough?—That is what I always maintained and believed was the true cause, but I was always told that the money was there, but it could not get through until we waited. Recently it has been said that it was not the absence of money that was causing the delay. I always believed it was.

41337. Leaving that out for the present, you say that the landlords have a feeling that the Estates Commissioners are not going to offer them a fair price?—Yes.

41338. What I want to know is, how do you propose that a better state of things should be arrived at. On the one hand you say that the Estates Commissioners are perfectly right not to purchase without inspection. You know from what Sir Antony has said, and what you have heard before, that the landlords have refused in many cases to allow inspection, and you say that the explanation of that is that they believe that the Estates Commissioners are not going to treat them fairly; in other words, that at this moment they don't want to sell. It comes to that, does it not?—They don't want to sell at the price offered.

41339. At the price which they think is going to be given by the Estates Commissioners?—Yes.

41340. Therefore, before a better state of things can be arrived at, you have got somehow or other to restore confidence among that class in order to make them allow the Estates Commissioners to make the inspections which you say are necessary?—Yes.

41341. How is that to be done?—I may say at once, with fairness to both landlords and Commissioners or sub-purchasers from them, I don't think that the thing can be carried through in such a way as to treat everybody fairly without more funds. They must be prepared to lose more money.

41342. Sir FRANCIS MOWATT.—Or pay a higher range of prices?—If they pay higher they won't get the holdings taken.

41343. Sir ANTONY MACDONNELL.—They cannot recover from the tenant-purchasers the amount that they give to the landlords?—No. I think that there is a gap that will have to be bridged over to give the landlord his true value and to give the tenant-purchaser his land as cheaply as you want to give it to him.

41344. CHAIRMAN.—In other words, it comes to this: in your opinion, when you say that the land can be bought at a fair price at present without compulsion, you mean that the land can be bought only at a higher price than has been hitherto usually paid by the Estates Commissioners?—I might say I think that there is a great deal of land that could be bought even at present prices if there were quick sales; perhaps I should say at a price of a year or two ago, because prices have fallen just recently.

41345. Suppose that that is so, if the landlords refuse to allow inspection, how can that be brought into the market?—I think that with a little tact, inspection can be arrived at, if it was generally understood that a fair price would be given, and I think that it could be bought as I say even at the price of two years ago; of course they are giving less now.

41346. I don't know what you mean by a little tact?—A circular sent out by the Estates Commissioners won't bring landlords in, because they suspect; but I should have thought that some of the owners and agents could be approached.

41347. And told that the price which will be paid is a price which is likely to satisfy them?—Yes.

41348. Sir ANTONY MACDONNELL.—Which cannot be recovered from the tenant?—No. I am sure it cannot.

41349. CHAIRMAN.—You say yourself there must be a gap?—There will be a gap if you want to cut up this huge quantity, because if you cut up this huge quantity there will be considerable difficulty in getting tenant occupiers, and you will only get tenant occupiers if you give it to them very cheap. That was the real difficulty.

41350. Sir ANTONY MACDONNELL.—We have it, on the other hand, that there is not enough of grass land in Connaught to satisfy the demand for it for the enlargement of uneconomic holdings and the relief of congestion; that the supply of this land is not equal to the demand?—I do not accept that for the moment.

41351. CHAIRMAN.—It comes to this: in your opinion, before land can be bought tact has to be exercised; by tact you mean that the Estates Commissioners have got to approach owners and agents and tell them that the price which they are likely to get is one that will give them satisfaction?—I don't think that a formal document from the Estates Commissioners' office would be the best way of doing it.

41352. If that is so, don't you come very near to what Mr. Sutherland just now suggested, that that is equivalent to telling the owners that the fair price shall be practically their price?—To some extent, yes, but what I maintain is that their price is the fair one.

41353. You meant that their price is the fair one?—Yes.

41354. In your view, the price which the landlord asks is the fair one?—I don't say that there are not some unreasonable ones.

41355. Generally speaking, you are of opinion that the price which the landlords are asking is the fair price?—Yes.

41356. Therefore, in order that this land may be bought at what you call the fair price, it will come to this, that the Estates Commissioners must approach privately owners and agents and inform them that they are now in a position to buy land at a price which is practically their price?—Yes. I don't think they need even go that far, because I think there are a number of landlords who would take a great deal lower than what I would call their price; but it is their impression, rightly or wrongly, that the Estates Commissioners last year or so wanted to get the thing a great deal cheaper than they did before, and that there will be huge delay; and I know cases myself in which the delay has frightened them.

41357. Will you admit that in order to bring about this state of things, the Commissioners have got to let it be known that they are prepared to make considerable advances upon recent prices?—That they will make some advance.

41358. A considerable advance upon recent prices?—I don't think they have bought much lately.

41359. You say yourself that prices have fallen lately?—Rather what they are offering.

41360. Well, recent offers then; that the offers in the immediate future are likely to be more favourable to landlords than recent offers?—Yes.

41361. Only by that means you think will the landlords be induced to sell?—That means would be, I am sure, effective. Whether more could be done with smaller means I am not prepared to say, but that means would at once bring in a very large quantity of land.

41362. That is what you mean by fair price; if we wish to buy voluntarily in this way we have to come to the landlord's price?—I think I started by saying that I considered the landlord's price a fair one, generally. In individual instances you may get an unreasonable owner.

41363. His lordship also questioned you with regard to the acquisition of grass lands, and asked you whether you did not think that the purchasing authority ought to obtain possession of grass lands before dealing with the highly congested areas, and I think you agreed to that?—I agreed that they should have some on hands.

41364. Am I right in thinking you have solely in your mind the possession of grass lands for the purpose of relieving congestion?—Yes.

41365. Planting migrants or enlarging uneconomic holdings?—Yes. Of course I have got another suggestion as to what is not directly enlarging, but improving uneconomic holdings.

41366. The moving of migrants is the use that you would make of grass lands in your possession?—Yes. You may remember that in answer to his lordship I said something about the state of the country as well as the removal of congestion because the two things are not necessarily the same.

41367. I am coming to that. You would support the possession of grass lands in the hands of the Congested Districts Board or the Estates Commissioners for the purpose of relieving congestion, would you not?—I would.

41368. And also you say on account of the state of the country?—Yes.

41369. What do you mean by that?—There has been a plan put before you which is by no means the relief of congestion which it might be desirable to carry out in order to quiet the country, and so on.

41370. What is that?—The plan was not to remove a family or household, but simply to give the son of a tenant a new holding. That would not, of course, in any sense relieve congestion. It might, on the other hand, create congestion. By giving one of the members of the family a new holding of grass land and leaving the father and mother and the rest of the family on the old congested holding, it would mean that you would have (perhaps probably in the future) more congested holdings than hereafter. That scheme was put before you.

41371. What connection do you want to draw between that and the present state of the country?—Because I think in parts of the country that that is the object much more than giving up the old holding for the enlargement of surrounding holdings. If you confine yourself to cases where they are giving up the old holdings you will require very much less grass land than if you are going to give new holdings to sons all over the place.

41372. Is this your view: that there are two distinct questions. One is the question of obtaining land for the purpose of relieving congests, that is to say, through migration, and the enlargement of uneconomic holdings, and there is also the other question, quite a distinct one, whether you should acquire grass lands for sub-division among the sons of tenants or other people who don't seem to have so good a claim upon the land: is that so?—Quite; and the doing of the latter may be desirable and may be a good work in providing a living for fellows all over the country, but it will not directly relieve congestion in any way.

41373. In fact might it not have the opposite effect and make it more difficult to relieve congestion?—It might not only make it more difficult to relieve congestion, but it might create, and probably would create, new congested districts in the future.

June 10, 1907.

The O'Conor Don.

41374. If the grass lands of Roscommon were to be acquired and parcelled out among the sons of tenants and other people who are not directly connected with the land, would not it make it much more difficult to relieve the congested districts by schemes of migration?—Undoubtedly.

41375. That land is being used for other purposes?—Yes, and the land might itself become a congested district in the course of time.

41376. It would be as impossible to cure congestion by the agency of migration if the land were given to these people, as it would be if the land were allowed to remain in the hands of the landlord class, who refused absolutely to sell on any terms?—It would be more so in the case of the tenants' sons.

41377. Am I to understand that when you advocate the acquisition of a certain amount of grass lands, you advocate it simply and solely for the purpose of relieving congestion?—Yes; I think so.

41378. If that is your view, may I ask if you have any opinion as to what body should hold that land—the Estates Commissioners or the Congested Districts Board?—I think they have both been doing a good deal of work in the matter, and I think it would be very undesirable to take it away from either. Let each go on as it has been, only give the Congested Districts Board more power. I would not tie them up.

41379. Do you believe that if the Estates Commissioners were to obtain large tracts of grass land it would be feasible or possible for them to hold that land mainly for the purpose of relieving congestion?—I think it would be difficult.

41380. Do you believe it would be possible for the Estates Commissioners to hold that land until the Congested Districts Board were in a position to make use of it by planting migrants upon it?—It depends on how much they got. If they got a very large quantity, undoubtedly not; if they got a small quantity, probably yes.

41381. In your view, then, if they obtain a quantity largely in excess of the amount that the Congested Districts Board could utilise immediately the pressure upon the Estates Commissioners would be very great to break up that land among the sons of tenants?—I think it would.

41382. And others not directly connected with the land at present?—Yes.

41383. In that case would the state of the country be likely to improve?—I doubt it.

41384. Would it, in your opinion, be merely diverting the agitation from one source to another?—It might.

41385. Then may I take it that, in your view, if the grass land is to be held for the relief of congestion, the grass land should be held by the authority that is going to move the migrants—in other words, the Congested Districts Board?—Undoubtedly I think so. I don't know if I explained myself clearly before, but I think that it would be undesirable for the Estates Commissioners to buy grass land for the purpose of plotting it out among Congested Districts Board migrants or for the Congested Districts Board to have grass land for the purpose of utilising it for migrants from estates bought by the Estates Commissioners. Each ought to deal with their own. An estate may be bought by the Estates Commissioners, and there may be congested holdings on it and they may want to remove them. Then I should say that they should remove them to land that they have bought, and the Congested Districts Board should remove their migrants to their land, and not crossways. I don't think it would be desirable to have the double scheme unless the land provided was so much in excess of the requirements that they did not know what to do with it.

41386. In your opinion both bodies should at one time only hold land sufficient to meet the immediate needs of congestion?—Yes. I use that particularly with regard to the Estates Commissioners in the sense not merely of transferring migrants, but I think a great deal of good can be done by holding land adjoining estates purchased, and using that for grazing purposes for the use of the tenants on the estate at low figures. That is what they have been doing to a great extent now, and it is not at all an unpopular thing.

41387. Do you contemplate that it is desirable to continue the present system that both bodies—the Estates Commissioners and the Congested Districts Board—should operate as purchasing authorities in the same area?—I don't see any reason why they should not. They might make a rule among themselves that one should not offer for any land that is being offered to the other.

41388. Is it not possible that friction and difficulties may be caused by differences as to price—might it not be that the price offered in both cases is not the same?—Quite.

41389. Is it, to your mind, desirable that within the same area there should be practically two Government bodies—regarding them as Government bodies for the moment—offering different prices?—You would have substantially the Congested Districts Board dealing with congested estates. The suggestion I have made is, let them deal with it more than the others, but I would not make any hard and fast rule. Any hard and fast rule that you make will create more difficulties than you get rid of.

41390. What is your objection to seeing the whole of Connaught, for instance, put under one purchasing authority?—I think that putting the whole of Connaught under the Estates Commissioners would be a mistake.

41391. Reverse it and put it under the Congested Districts Board?—I don't see the same objection to that, because I think that the Congested Districts Board at present knows more about how to manage and deal with congested estates than the Commissioners do.

41392. Suppose you were to put the whole of Connaught under the Congested Districts Board, and make them the sole purchasing authority, do you see any objection to that?—I see one objection, that they would be buying a lot of uncongested estates, taking up time and money, that was quite immaterial to their business.

41393. Suppose you got over that: suppose they did not deal with estates that were not congested?—If you exclude the Estates Commissioners from Connaught you would have nobody that could deal with these estates.

41394. Suppose that there was a method by which the Estates Commissioners could be brought into operation in Connaught with regard to properties that were not in need of improvement: suppose, therefore, that the work of the Congested Districts Board was practically confined to poor estates, and estates which needed improvement, do you see any objection to that?—Yes; the difficulty of determining. It is exactly the same difficulty that you will have by making a rule instead of leaving it to each party to work out as they do at present. You will have it said "this estate is *ultra vires*" whichever body you go to. Take my own estate. It is a non-congested estate. Suppose you say that the Estates Commissioners are to deal solely with non-congested estates and not the Congested Districts Board. If offered to the Congested Districts Board they cannot deal with it, and you would have to have some third body to settle who is to do it. I don't see how you can have that without throwing work on one body that ought to go to the other.

41395. Sir Antony MacDonnell.—Do you see any objection to the Estates Commissioners being the sole purchasing authority in Connaught, with power to the Congested Districts Board to requisition the transfer to them of any estate which they please, leaving to the Congested Districts Board then the entire management of estates after purchase had been effected?—Yes, I do.

41396. What is it?—First of all, that the Estates Commissioners already have more work than they possibly do.

41397. Leave that out?—You ask my objections.

41398. I mean to say any fundamental objection apart from increase of establishment?—I think the Congested Districts Board know more about the estates, and it would be better to let them, when they have got the grass land from other sources, see the estate and see what arangement they can make rather than have one body buying and another parcelling it up afterwards.

41399. You mean that the purchasing authority should also be the authority for subsequently dealing with it?—Yes.

41400. Because in fixing the price it is necessary to bear in mind what use it can subsequently be turned to?—Quite.

41401. How is that consistent with your statement regarding the Estates Commissioners in regard to the

ce which they offer. You say they offer too little: the Estates Commissioners in fixing the price st have regard to the use which afterwards the ate is being turned to?—And I prefaced my re- rks by saying that I did not in any way blame m personally, but I think I suggested that there ght be a gap to be got over.

41402. What you propose really is a second bonus? an increased bonus, but what I say is, even ving regard to what can be got afterwards in ny cases, I think more can be got than they think be got.

41403. Most Rev. Dr. O'Donnell.—If the Con- ed Districts Board were the sole purchasing hority in Connaught, might not there be an angement by which estates not requiring special atment would, on a certificate from the Congested stricts Board, be transferred from owner to tenant? That can be done at present.

41404. Do you see any objection to that?—No, I n't, except that you are throwing a lot of uncon- ted estates on the Congested Districts Board, and fore you can do that there is a very great deal work which would occupy a very great deal of ur time.

41405. In the transfer of land at present through Congested Districts Board, is not it a fact that great deal of the process is in the hands of the tates Commissioners?—Yes.

41406. Would not that continue in any case?— s. You propose to leave it all the formal deal- gs?

41407. My question is this: do you see any diffi- lty in making the Congested Districts Board the rchasing authority in Connaught, with this pro- so, that where an estate does not require any ecial treatment from the Congested Districts Board, a certificate from the Congested Districts Board, will pass from the owner to the tenants, as other tates do in the non-congested area or outside of nnaught, through the agency of the Estates Com- issioners?—Except that it is throwing on the Con- ted Districts Board an increased amount of work.

41408. What work would you throw on them?— settle whether the estate should or should not ass. It would be a very great amount of work to your schemes into proper order. I don't know hether your proposal would do away with direct ales.

41409. That is not so. It would enable the Con- ted Districts Board at once to deal with such ngested estates as they acquire, and get over ny danger that there would be a conflict as to hich body should have any jurisdiction in that par- cular place?—But I don't think there would be any nflict.

41410. I think you don't see any difficulty in my ggestion?—My suggestion is to leave them as they re. There is no conflict. Your suggestion would row a great deal of unnecessary work on the Con- ested Districts Board.

41411. But do you recollect that at the start you hrew upon the Congested Districts Board the respon- ibility of determining all over Ireland whether an rea should be scheduled or not?—Quite.

41412. Is not it much less than that to put on the Congested Districts Board the duty of determining whether an estate in Connaught should pass from the wner to the occupier without special treatment?— One does not negative the other, and because you hrow a lot of work on them it does not follow that ou would relieve them by the former.

41413. In your opinion, if some of those owners to whom you have referred were approached in an in- formal way there would be a chance of their selling o the Congested Districts Board or the Estates Com- missioners at the prices that prevailed?—I think that a certain number would.

41414. Is not that a greater reason why the Con- ested Districts Board should have the funds necessary o enable them to go on with this work?—I think they would sell more quickly to the Congested Districts Board. Rightly or wrongly, landlords are under the mpression—and I know many cases in point—that if ou sell to the Congested Districts Board you get your money quickly. If you sell to the Estates Commis- ioners you don't.

41415 Is it not a fact that the Estates Commis- ioners cannot possibly hasten payment of the money o the owners in many cases? How can they do it with all the other sales that have been agreed to, are before any sale that may be concluded to-day or to-morrow?—I know there is not enough money, of course. There has been blame thrown upon certain parties, who have been described as carrion crows, but I must say I don't think the solicitors as a body are at all responsible for the delay, although if you bought from a private individual you would have a sale through in a month or two, while if you sell through the Estates Commissioners it will take two or three years. Of course, you have got in a private sale solicitors on both sides.

41416. Mr. Kavanagh.—Do you think title would be proved in a month or two if you sold to a private individual?—Yes. I have invested some of my purchase money in what some people would say is a foolish investment, the purchase of land in Ireland. In every case six weeks was the longest date for completion.

41417. Chairman.—What is your next point?—The districts in Mayo south of Belmullet. These districts, such as Doohooma, Geessalia, &c., are no doubt poor, the land is bad, and there is not much of it capable of cultivation; but what there is of it consists chiefly of land capable of improvement by drainage and otherwise. The population is a sea-supported one, and there is no other land in the immediate vicinity available for enlargement. Improvement of the fishing, assistance in draining and improving the methods of cultivating the lands, exchange of seed potatoes, are suggested as remedies. There is a great deal of drainage that might be done out there with advantage. Of course, it is a very wet district. There is no grass land of any value. There is a good deal of unoccupied land, big tracts of country with no population. It is all moor and waste. Making roads might help. I don't think it is a district in which very much can be done except by trying to make the people as comfortable as possible. There is a good deal done by the Parish Committees. If you go around you will see at once where the Parish Committee has been at work by the difference in the appearance of the houses.

41418. Sir Francis Mowatt.—When you say unoccupied, do you mean absolutely derelict?—Yes. It is not land that would pay cultivating.

41419 Chairman.—Would it graze sheep?—Some of it, the inland district. The lace industry is doing some good in the district.

41420. Sir Francis Mowatt.—Only for the women?—Yes. In some of the inland districts which border on grass lands the enlargement of holdings, rather than migration, might be useful, but everything possible should be done to encourage all local industries. Foxford is an instance of what can be done in a comparatively short time without any heroic methods of migration. The members of the Commission have been to Foxford. It is quite worth seeing. It is quite extraordinary.

41421. Mr. Sutherland.—We have been in other places where local industries have not been so successful?—It is quite extraordinary what they have done at Foxford I saw the industry there when it was started, when it was in a very small way. It is wonderful how the district around has changed.

41422. There are some places that have not succeeded?—Yes; that is due to some extent to want of management; not bad management.

41423. Was there anything in the case of Foxford that would tend to make it more successful than other places?—It looked a very hopeless place to start anything in. It is in the wilds of Mayo.

41424. Most Rev. Dr. O'Donnell.—I think you will find that Foxford is the only project of this class that the Congested Districts Board has put its hand to?—I remember going down there on one occasion with my father when the people around Foxford were anxious to get help from the Congested Districts Board, and it was for the purpose of trying to get this help that we were asked to go down to assist.

41425. Mr. Sutherland.—Did they get assistance?—They did, but the people set it going themselves.

41426. Most Rev. Dr. O'Donnell.—There was help given on educational grounds. There was a loan of £10,000 on easy terms, which has almost been repaid entirely, and there were capitation grants for beginners who were not trained?—It is extraordinary what they have done, and it is not only in the factories, but in the cottages around. They have improved the whole district. It is not easy to get a man to manage local

June 10, 1907.

The O'Conor Don.

industries. Foxford is lucky no doubt in that respect. They have a very large installation of machinery and plant.

41427. CHAIRMAN.—It struck me that it was mostly women who were employed?—Yes. There was a large part of it burned not so very long ago, and I was there shortly after, and they said it would not interfere with them very much.

41428. Mr. KAVANAGH.—Are the wages good, do you know?—They are not. They would not be probably high as compared with wages in England, but I forget what they are.

41429. Do you think it has attracted any population?—It was an excessively congested district. You would hardly want to import people into congested districts. As regards the relief of congestion, the Congested Districts Board has proved itself the most efficient body for dealing with the question, and, if scheduled areas are retained as a basis, the purchase of all lands in the district scheduled should be in their hands; they should have power to buy grass lands outside these districts, and the Estates Commissioners should not in any way interfere with their operations, and should merely be used for the purpose of financing and carrying through the legal part of their purchase and sales. Of course I do not think it would be desirable to transfer to the Congested Districts Board all the trouble of investigating title and that kind of thing.

41430. CHAIRMAN.—I think that that statement rather contradicts the attitude you took up before earlier in the day. I understand what you now say to mean that if the congested districts areas are to be retained the Board should have the entire control of these areas?—Yes; but then it was put to me that there would be such a very large change in the scheduled areas—the point suggested to me was the whole of Connaught should be scheduled. Well, I think that completely alters the question. If you schedule the whole of Connaught, you will be dealing with an enormous quantity of uncongested estates, and I think it undesirable to put these estates in the hands of the Congested Districts Board. The income of the Congested Districts Board should be largely increased, so as to enable them to give more assistance to the very poor districts, either for building piers, providing boats, making roads, drains, etc., and subsidising any industries that may require it and might be useful. I do not think there is a great deal of difference of opinion about that. The only difference is how to get the money. Their work through the Parish Committees should be encouraged and enlarged. In most places where a Parish Committee is at work a great improvement in the condition of the people is visible, but so far these Parish Committees have not done much towards draining and improving the lands, as the means at their disposal were insufficient for this purpose. Such work might usefully be done by them, but strict supervision would be necessary, and any Committee found to be wasting its funds should at once have them cut off. I am not in any way blaming the Parish Committees for not doing this. They have nearly always made a rule to improve the dwellings.

41431. Most Rev. Dr. O'DONNELL.—They begin with the homesteads?—Yes.

41432. And although they begin with them, in some instances they have gone outside?—Yes.

41433. You think it desirable that draining and fencing should occupy their attention? I do. The way they do it is a good way—not giving the whole cost, but assistance towards it. As a general rule, they give the cost of the material.

41434. Sir FRANCIS MOWATT.—Do the Parish Committees contribute to drainage schemes?—No; but if their finances were improved, they could usefully do so.

41435. I thought you said that was the practice now?—No; it is not. They improve the homestead. My suggestion is that they should do so.

41436. Most Rev. Dr. O'DONNELL.—You will be glad to hear that in some instances they have gone in for drainage?—Drainage can only be done by them in a small way. Big arterial drainage could not be attempted.

41437. Sir ANTONY MACDONNELL.—You have said that Parish Committees were only effective when they had a good Chairman and when the priest took an interest in them. Where the priest does not take an interest, is it not satisfactory?—In the majority of cases, no.

41438. Are there any indications of a better state of things? Are there indications of a public spirit being elicited by the system of Parish Committees?—There are such a large number that do succeed.

41439. You think there must be something else besides the individual initiative of the priest?—I think they want guiding at present. In a few years, they may be able to do without the guidance. In most districts you will get the priest to help.

41440. He is the moving spirit at present?—He is.

41441. Can you give an opinion upon the relative merits of the two systems of Parish Committees that in Donegal which works by a system of prizes, and that in Mayo, which works by a system of grants?—I am afraid I cannot. I do not know anything about the Donegal system. The Mayo system seems to work on the whole very well.

41442. Mr. KAVANAGH.—Is there any elected element in the Parish Committees?—There is.

41443. Most Rev. Dr. O'DONNELL.—The Parish Committee is composed of some *ex-officio* members, of some indirectly elected and some members directly elected by the people of the parish.

41444. Mr. SUTHERLAND.—Do Parish Committees carry on their operations indifferently whether the land belongs to a landlord or is purchased?—It improves the dwellings.

41445. Do they improve the property of the landlords?—It is hardly the property of the landlords.

41446. In the drainage to which you refer?—That is not done.

41447. You are asked what they have done?—It is more clearing cattle out of the houses and building sheds, and keeping the house properly thatched.

41448. Mr. KAVANAGH.—It is more sanitary work they do than improving?—Yes, sanitation.

41449. Most Rev. Dr. O'DONNELL.—They build outhouses for the cattle and improve the dwellings?—They don't really build. They give a grant towards building. They give what is generally estimated as the cost of the material. In congested areas the work of the Agricultural Department should be left to the Congested Districts Board. The latter body seem to have succeeded better in the poor districts. The Department formulates schemes for whole counties which are not suitable for the very poor districts. Moreover, the Department give instruction chiefly by lectures, whereas the Congested Districts Board go direct to the poor man, and do not require him to go to them. I do not wish in any way to suggest that the Department is not doing very useful work. I merely wish to point out that, in my opinion, it is not so well adapted as the Congested Districts Board to carrying on its work in the very poor and congested areas. The Department is really more for the county at large.

41450. CHAIRMAN.—You told us about that this morning?—I have not so far dealt with the migration and enlargement of holdings, which is probably the most important question before the Commission. I do not think this remedy can be regarded as a complete solution of the problem. If it were possible to carry it out in the wholesale way proposed by Mr. Finucane and others, it would probably lead to complete ruin in many districts. He advocates cutting up almost all the grass land in the country, and dividing it into comparatively small tillage or mixed farms. This would almost necessarily put an end to all market for hay and other similar farm produce; the cost of transit, even at low rates, would prohibit its being transported any great distance, and the small farmer would of necessity be bound to have it consumed on his own farm.

41451. I do not quite follow that. Why would it put an end to all market for hay?—Because there is nobody to use it, assuming that the small producer does not consume it.

41452. Well, still I do not quite understand?—At present you have a large area of grass land. You have a comparatively small portion of that in meadow. The class known as the eleven months' tenants, so much objected to, buy a large quantity of hay. You are going to do away with them, and cut up all these grass lands. The result will be an enormous production of hay on that grass land.

41453. Why?—That is what the small man will do.

41454. Why not graze it?—In the first place, he

n't have the capital, and secondly, hay for the me being will pay him better.

41455. Why would it not pay the big man?—I ly say for the time being. It is not an economic ing to do. It deteriorates the land. But that they ll grow hay and grow it largely I have not a shadow doubt.

41456. Sir FRANCIS MOWATT.—Not if there is no rket for it?—They could not graze it without ock. They are not provided with money for ck. Then it is not so economic. You can feed hundred beasts on, say, two hundred acres more sily than you can feed ten on twenty acres. The bour of looking after them and cost of fencing will ke it quite impossible to feed the stock. It has en suggested by one or two witnesses to in-feed the ttle in the winter, but that is out of the question r the small farmer.

41457. CHAIRMAN.—I take your two instances—the st of fencing and labour and looking after the cattle. ne fences are made by the Congested Districts Board? They are charged to the tenant very often. I am lking now of the Estates Commissioners' work.

41458. There may be a certain amount charged to e tenant, but practically the loss is the Congested istricts Board's?—You will not get your stock to do well on the small patches.

41459. I cannot understand why. If you get a ld of a certain size which at present grazes a cerin number of stock, and is in the possession of a rge man, and if you give it to a small man, ny would it not be able to bear the same amount of ock?—If you cut the field into two or into ten it ll be different.

41460. Leave it as it is. Say five or six acres?—ne large bulk of the fields are not cut up into five six acres.

41461. What do they run to?—Thirty or forty res is what we have here.

41462. Take a field of thirty acres that at present portion of a man's holding of 200 acres. You ke it away from that man and give it to another. hy should that field be less able to carry the same nount of stock when in the possession of a small an than it did when it was one of five fields and art of 200 acres?—There is a reason, because the nall man would not constantly change his stock ke the big man from one field to another. I think at this map gives a very fair instance of the differnce. You can see the original fences here and ou can see new ones, and you can see that there is vast difference in the number of fences. (*Produces ap.*)

41463. Most Rev. Dr. O'DONNELL.—If mixed farmng were practised on the new holdings, do you see n equal difficulty?—I am coming to that in a inute.

41464. CHAIRMAN.—Does the big grazier take his ttle from one field to another?—Yes.

41465. Sir ANTONY MACDONNELL.—We have had a t of evidence to show that on these small fields the rmers can keep their stores and market them at an rly age. Mr. Stuart pointed out how that is done, nd we have plenty of evidence showing how in-feedng is practised in Ulster?—I shall come to that in minute.

41466. You say, "If it were possible to carry it out n the wholesale way proposed by Mr. Finucane and thers it would probably lead to complete ruin in many districts." What I understood Mr. Finucane meant was that land should be taken when necessary rom holdings exceeding £100 rateable valuation, r, if necessary, exceeding £50 in rateable value. That is not splitting up grass lands into small holdngs?—Yes, because he does not propose to allot it nto new holdings of £50. He proposes making the ew holdings quite small ones.

41467. Thirty to fifty acres?—Thirty acres won't e very large for grass land, if it is to be a grazing olding; but what Mr. Finucane proposes is tillage.

41468. The idea was that he would have a holding f, say, twenty or thirty acres, and part would certainly be in tillage, and people who deprecate that way of looking at it, and say that the Irish tenant s extremely lazy, and will feed the cattle instead of illing the land, say that this is a very bad way of oing it; but I may point out to you that we have vidence of where small holdings have been created in he West of Ireland, and that result has not followed, nd that a considerable portion of the land has been rought under tillage and a sufficient portion of the land kept in pasturage, and that people do keep the cows and the stores instead of going through the process of the middleman. That is the sort of stage of society you wish to reach, though you tell us that stage can never be reached; but the actual fact is it has already been reached?—I should fancy that there would not be the slightest difficulty in pointing to very many cases where it has not.

41469. Very possibly. I know, for instance, in your own case, in part of your evidence, you point to that; but the explanation is that the division was made so late in the year that it could not be done otherwise?—I think I have an answer for that when we come to it.

41470. Mr. SUTHERLAND.—Do I understand that, acre for acre, the large holding contains more stock than the small one?—Assuming that it is going to be a grazing holding.

41471. I ask the general question, and it applies to grazing and other holdings. Is it according to experience that a large holding contains more stock, acre for acre, than a small one?—More economically maintained; more stock are contained on the larger.

41472. I am talking of numbers?—You can get more on a small, but it won't pay you to have it.

41473. Is not it the case that they do maintain more stock?—I say they could maintain more on the small, but, in practice, they maintain more on the large. You can do it, but not economically.

41474. Is it done?—Not as a rule.

41475. You are referring to Ireland?—To the West of Ireland. You find more per acre on the large than the small.

41476. Sir FRANCIS MOWATT.—Would you mind developing that a little and showing us how you can have more on the small holding, and why it does not pay?—Because on the small holding, supposing it is a grazing holding, you pay a man and his family to look after, say, twenty acres. I am now excluding tillage. On the large you have a man and his family looking after 200 acres.

41477. Sir ANTONY MACDONNELL.—The small holding would occupy the tenant himself and his family, and you pay no man?—That is a fallacy, and it would be grossly unfair to the tenant to value the land and give him nothing for his time looking after it.

41478. Mr SUTHERLAND.—The official returns in Ireland and Great Britain show that there was more stock maintained in small holdings, acre for acre, than on large?—I have not the official returns. I know the holdings about me where there is very little stock.

41479. Mr. KAVANAGH.—The witness is assuming that the small holdings will be in grass?—I was dealing with it on the assumption that it was a grazing holding. As a grazing holding it would not pay. It could not pay because it is too small. Then you are going to put it into tillage?

41480. Mixed farming?—The suggestion that has been made about mixed farming was to stall-feed in winter. If you refer to Mr. Doran's evidence, you will find he suggests that himself. If you don't do that, what is to be done with the produce? I have read a vast amount of evidence, but I found very little—and the little there was of a very meagre and sketchy nature—as to what the produce was to be. Dealing with this; supposing it is land in Roscommon, as to what it is to produce, I found practically no evidence I have read the evidence of some experts, or so-called experts, as to how a mixed farm was to be worked. They were mostly men who, as far as I know, had been in Government institutions, where they always lose on their farms.

41481. Most Rev. Dr. O'DONNELL.—Mr. Doran himself has an agricultural farm in the West, and has worked it. He has also practised in-feeding in winter. Have you read his evidence?—I have, very carefully.

41482. What do you say to it?—I did not know that Mr. Doran had practised it personally. If he has, it is on a very small scale, he has got so much else to do.

Sir ANTONY MACDONNELL.—I think he farms 500 acres.

41483. Most Rev. Dr. O'DONNELL.—As a matter of fact he had a large farm which was under a system of agriculture under his own supervision for a number of years?—I was not aware of that with regard to Mr. Doran; but I may say that in our place we have tried in-feeding of cattle, and I know that a great

June 10, 1907.

The O'Conor Don.

many round us have abandoned it as hopeless to make it pay. You will find it is being abandoned all over the country.

41484. Sir FRANCIS MOWATT.—When you say you have tried in-feeding, do you mean you have sold them eventually to the butcher?—Yes. For the English and the Dublin markets, and local requirements.

41485. Most Rev. Dr O'DONNELL.—I can give you the exact locality in which Mr. Doran's farm is situated. It is in Tavrane, Ballyhaunis?—We have found that in-feeding does not pay. A good many years ago it was quite in practice, but it has been given up.

41486. Mr. SUTHERLAND.—In Ireland?—In Roscommon. It is done in Wexford a good deal, but there are reasons for it there.

41487. Most Rev. Dr. O'DONNELL —And in Ulster?—A good deal probably in Ulster.

41488. Would you not consider that the conditions would be quite as favourable in the West?—No, the conditions for in-feeding would not be as favourable in the West, and you find that in Wexford, where they do it, they would tell you they would rather not, but there is no other way to utilise the land. They do it to get the manure, but it is very expensive, and hardly pays.

41489. Why do they do it if it did not pay?—If they could have the land in grass it would pay them better; but their land is unsuitable for constant grass.

41490. Are not wide areas in the West of Ireland more suitable for tillage?—I should say there are some. I should say you would not get the small farmer to do it, and then what crops are you going to grow?

41491. Sir ANTONY MACDONNELL.—Corn and roots?—The only thing that will grow at all is oats. Wheat is out of the question. We should not have heat for the wheat. Barley would not pay. Rye could be grown a bit. Oats would grow, but it is not a good crop at all. I have seen the herds' gardens in these grass lands, where they have tilled, and the oats have stalks six feet high, but there is very little oats.

41492. Mr. KAVANAGH.—That is the first year?—It will never be good tillage land. It is too sticky. It will grow fair oats, but not good potatoes at all. As to roots, it grows very poor crops. The large bulk of Roscommon land is on limestone, and the climate is decidedly wet, so that you have not a very big range of crops to choose from.

41493 Was it not all mixed farming at one time? Not since Free Trade.

41493A. You think Free Trade blotted out tillage in the country?—There is no doubt about it.

41494. You think Protection would bring back tillage?—I don't know. Tillage will not pay as compared with grass.

41495. Most Rev. Dr. O'DONNELL.—Don't you think improved methods of cultivation would do a good deal to bring back tillage?—I may say I myself do a certain amount of tillage. I have two or three farms, and the tillage farm is the only one on which there is a loss. I spend over £1,000 a year in labour. There is a big loss, and everything is worked as well as possible. There are many more improved methods adopted by me than will for many years be adopted by the small farmers.

41496. You may not be surprised to hear that in East Donegal there are many tenants who live exclusively by mixed farming, and that it is the regular system of farming in the division?—I think that possible. I don't know East Donegal. If you take the small tenants' holdings you will find the quantity of grass lands increasing. If you go around Roscommon I can show you acres and acres of tenanted land turned from tillage into grass, and when you find the tenantry doing that is it likely that if you give them grass lands they will go and do the opposite?

41497. Mr. KAVANAGH.—Is it a question of want of labour?—If you allow for the labour, it does not pay. If you do not allow for the labour it does, and you can get a big profit. In the good farms you will find very little given to tillage. If you go around Castlerea you will find a great deal of land in the hands of small farmers that has in the last twenty years changed from tillage to grass.

41498. Sir ANTONY MACDONNELL.—Do you connect that with emigration at all?—No doubt, to some extent.

41499. Has there been any introduction of labour-saving appliances in the meantime?—Very little, and I don't know how it would be introduced under the present system, because what you do is to cut up a grass farm and give each a piece, and the farmer generally has only a small capital.

41500. Is not the effect of your argument a sort of *non possumus*—we can do nothing; leave things as they are?—No, I have got a suggestion to make later on. I don't say you cannot do anything; but I say you could not expect these small farms to return proportionately as much as the same acreage in a big one, and if you carry out the whole scheme you will have the last state worse than the first.

41501. Upon that, I think, you are in direct conflict with the expert evidence of the Department of Agriculture, which says that you can make more out of a small farm in agriculture than in grass?—Whether I am or not, I say that an expert there consists in a man who as a rule is an expert in losing money, because there is not one of these Government farms or Government institutions that is carried on at a profit or pays its way. Take the universal experience in both England and Ireland since Free Trade was introduced, and everybody will tell you that the general practice has been to reduce the quantity of tillage.

41502. Mr. SUTHERLAND.—That is not so; it is increasing in Scotland?—In England and Ireland.

41503. In England very slightly; in Ireland very much?—It probably decreased before it began to increase in Scotland.

41504 Most Rev. Dr. O'DONNELL.—You refer to your own locality. You will not be surprised to hear that in East Donegal a 25-acre farmer would not dream of earning his living by allowing his land to remain in grass; he would consider he would get three times as much out of it by tilling it?—Take a broad view of the question, and see where tillage has increased and where it has decreased, and you will find that on the small holdings it has decreased. Take England. You will find large quantities of land going out of tillage, and you will find nearly every tillage farmer telling you it does not pay. If the experts are right that tillage paid, how can you explain the fact that it is decreasing?

41505. Mr. KAVANAGH.—But do you think tillage has decreased on small holdings?—In Roscommon undoubtedly. I can remember many fields that used to be in tillage that are now under grass on the small holdings.

41506. I quite admit what you say as regards large holdings, but I am alluding to small holdings?—You will see them growing grass. When you find that going on in existing conditions, is it likely when you have good grass land that takes five years to produce at least, that the tenant will go and break up a large quantity of that. What he will do is he will have a patch of tillage for his own home use. He will have a potato garden. In order to have a potato garden he will have an oat plot Those are the only tillage crops grown there now to any extent. My own experience of tillage is that it is a disastrous loss.

41507. Mr. SUTHERLAND.—Therefore your prospect is that the whole of the land will go back to a state of nature again?—If you call the grass land a state of nature. I think you will have all this land under tillage where it cannot be kept under anything else because it won't produce anything if you don't till it occasionally; and that land that requires to be tilled occasionally will be tilled. That is about what is being done now, but the land that will do best is grass will be left in grass.

Mr. SUTHERLAND.—That is a very dark prospect.

41508. Mr. KAVANAGH.—You will find that the land that has to be tilled and is tilled, pays the man who tills it?—It pays him something, but if it was good grass land it would pay him more. He can do it cheaper than I could.

41509. Good grass, certainly?—Good grass land is largely what we are dealing with. I regard the infeeding of cattle as out of the question for the small farmer. It necessitates the large use of cake and artificial food stuffs. Even the larger farmers, with plenty of capital, have found that it does not pay and have given it up. It has been largely tried on my Clonalis home farm, but without success. However, this complete transformation of the country into small farms is not a practical question, migration on the wholesale scale would be impossib

o carry out. The people would not move. No doubt, hen a Commission or inspector goes round, many ill say they will go, but when it comes to the point f moving, the position is very different, *e.g.*, this lonalis estate. A large body of tenants said they anted new holdings, and would migrate. The Estates Commissioners insisted on getting land at Belanagare for them. Eventually, with a trivial xception, not one would move, and as the Estates ommissioners find they can buy more grass land an they are able to dispose of to migrants, they ave not taken 145 acres offered to them at their wn valuation. There was a very large amount of orrespondence between my father and the Estates ommissioners as to providing grass lands at elanagare. He offered to undertake to give the elanagare grass lands to the Estates Commissioners henever the Belanagare estate was sold. He said e thought it was useless for Clonalis. However, fter a lot of discussion, there was an amount agreed pon—something between 300 and 400 acres—and aken, and the Clonalis tenants were asked one day o go down and say would they take holdings. The lonalis tenants were given the choice of the holdings ere. Some thirteen, to be accurate, went down to xamine the holdings, and although they had been amouring for new tenancies, only one of the thirteen aid he would take the holding. None of the others ould move, and the result was the Belanagare land, o my mind quite rightly, was divided up among he Belanagare tenants, with the exception of one ore or less non-resident tenant at Clonalis who had een previously asked to go.

41510. Sir ANTONY MACDONNELL.—The land was ally insufficient for the Belanagare tenants. It s a small point, and I won't cross-examine upon it, ut I believe, as a matter of fact, some Clonalis nants have since moved to the Taaffe estate, where and is provided for them?—A few of them.

41511. The land in Belanagare was really insuffient for the Belanagare tenants?—Insufficient in the ense, as Sir Antony MacDonnell pointed out a few inutes ago, that they did not know what they had. here are large fields shown on the map that had to e given to two publicans.

41512. Mr. SUTHERLAND.—But they have migrated ow, have they not?—Not a very large number. hree or four, or at the outside, half-a-dozen.

41513. What made them change their opinion?—ecause they considered the Taaffe land cheaper, and arther, it was nearer.

41514. Sir ANTONY MACDONNELL.—It is a fact that number of the Clonalis tenants have since asked he Estates Commissioners to let them move to other ands, thereby leaving some land available in Clonalis or distribution among these who remain?—I dispute hat fact.

41515. I am briefed to that effect, if I may say so?—I think when you inquire into the question, you ill find they are not tenants at all. They are relatives of tenants who want holdings.

41516. It is a slow matter, as you say, but the pirit of migration is beginning to move, and tenants re more willing to move now than two years ago?—f they get a really good bargain, yes; otherwise, o; but I don't think the number of migrants has ncreased very much. It is a very slow process, but he spirit is moving the people. As we are on this ubject, the Estates Commissioners bought this lonalis estate, which they made so much trouble bout enlarging. On one townland, where there is eal congestion, they have done nothing, because it ust happens they cannot get people to go there. I night say there has been no relief of congestion whatever on the Clonalis estate.

41517. I would not put it so bluntly as that. It an only be afforded by the departure of people from lonalis, thereby making it possible to distribute the and they relinquish amongst the people left?—What is being done is this. Tenant A has been moved and tenant B given A's holding. Although there are a large number of changes nominally, actually there is only one; so you have a great many more changes reported than in fact took place. I should say there is no appreciable difference as regards congestion of the estate. One labouring man's holding has been enlarged up to about £4 or £5. That is almost the net result. One big man was, however, transferred to Belanagare, and that helped some half-dozen tenants.

41518. CHAIRMAN.—You say that the Estates Commissioners could not find people to occupy grass lands?—Yes.

41519. I think you said that the result of this action was that only one tenant moved from Clonalis estate to the grass land, and eventually it was divided up among the Belanagare tenants?—There was one big man who was arranged for by my father.

41520. He went to Belanagare?—Yes.

41521. With the exception of him?—There was the brother of the Belanagare schoolmaster. His was only fifteen shillings a year.

41522. The point is, do you think the breakdown of the attempt to migrate to Belanagare from Clonalis was due in any way to the feeling of the Belanagare tenants about having land divided up amongst Clonalis men?—I don't think there was any very serious difficulty. I think there would have been a little friction. Of course the Belanagare men were aware they were going to get a very large quantity, or rather more than they wanted.

41523. Is that not sufficient explanation why the Clonalis men would not do that?—No; but I think it probably had some influence. You see, some of Belanagare land could not be used up.

41524. Sir ANTONY MACDONNELL.—Are you sure. I am informed that the area sold was insufficient to enlarge small holdings on the Belanagare property?—The land had to be divided up between two publicans because there was no one else to take it.

41525. It was the remnant, and they were on the estate, and that was the reason it was given to them to finish up the business.

41526. CHAIRMAN.—Is it quite certain that the refusal of people to take that land was not due to the fact that it was known that the two publicans in question would like to have the land?—I don't think it was known until the last minute. It was not suggested. I may say that there are one or two now in Belanagare who are asking for land that was not provided.

41527. Sir ANTONY MACDONNELL.—Is that several months ago?—There are a few still wanting land, but there was more than would satisfy them, and there is that there still if anyone wants it.

41528. Sir FRANCIS MOWATT.—You said just now that one of the tenants who migrated was a labourer with a very small holding. You told us, I think, some time before, that your labour bill was something over £1,000 a year. Do you always find it easy to get labour when you want it?—No.

41529. To what class do the labourers belong?—Small holders.

41530. Where do you get labour from when you are there?—Simply and solely from our own tenants.

41531. From small holders?—Up to £4 or £5.

41532. Then, as soon as the bulk of the tenants became (to use the expression we hear so much of) economic, the labour supply will greatly shrink?—I suppose it would. Of course that has not happened yet, because there has been no change on the Clonalis estate yet. At present there is rather more difficulty than usual about labour on account of the work of the Congested Districts Board, and to some extent of the Estates Commissioners, because they are employing labour largely, and just at the time the crops are being reaped there is great difficulty in getting it. They are getting higher rates than usual. I do not object to that.

41533. We have been met with two somewhat inconsistent theories. One is that men are leaving the country in great numbers because it is impossible to find employment at home, and on the other hand that the farmers can't employ labour because labour becomes so scarce and the price has gone very much up. These two things are rather inconsistent?—I know a number of young men who would not come in to work with us. They were in rather a better position than the men I have been speaking of. They are labourers who go over to England to work. It may seem strange, but it is a fact.

41534. They are better paid there, are they not?—They are, but if you take out their expenses and all that I doubt if there is very much difference. They are paid 14*s.* a week, and our rate is 2*s.* a day.

41535. CHAIRMAN.—Do you imagine a labourer working in Roscommon could in, say, seven months

June 10, 1907.

The O'Conor Don.

save £15?—If he was a married man with a family certainly he could not.

41536. Because is not that about what they do in England. Those men when they go away within less than seven months come back with about £15 saved?—That is putting it high.

41537. I should have thought it low. I was going to put the women as earning 12*s.* and the men 15*s.* to 18*s.*?—Very few women go from our part. Of course the class who go away are generally young men, and their actual support, living with father and mother, would not be very much. When you say 15*s.* do you count the initial expense of going?

41538. I fancy it works out at about £15 actually saved?—I don't think it is quite that.

41539. Sir ANTONY MACDONNELL.—How much do they save going to England—about 10*s.* a week?—It seems enormous. It means 12*s.*, or more than that, because they have railway fare and all that to pay out, and if they go as agricultural labourers in England they don't get a pound a week.

41540. CHAIRMAN.—Don't they in harvest time?—I don't think so.

CHAIRMAN.—They go, I fancy, from one harvest to another.

Sir FRANCIS MOWATT.—There are the two harvests.

CHAIRMAN.—And then there is potato picking.

41541. Most Rev. Dr. O'DONNELL.—Do you happen to know anything of the enlargement that took place on the neighbouring estate—the Ffrench Estate near Castlerea?—No, I do not.

41542. CHAIRMAN.—In a note on migratory labourers prepared by the new Department and printed in the Appendix to our Second Report it is stated:* "At the same time the Donegal men, having long frequented the districts in which they work, have a good idea of where employment is likely to be found. Most of the work is done by the piece or on special wages. Turnip singling and hoeing, potato pitting, and pulling turnips or mangels are usually done by the piece. Also when corn cannot be cut with the machine it is often harvested on piece-work wages. The working day is ten hours, but on piece-work longer hours are frequently worked. Wages vary much more than amongst the Achill workers, and it is therefore difficult to generalise as to earnings; 4*s.* 6*d.* is considered a fair day's wage for turnip singling, and 5*s.* for potato pitting and turnip or mangel pulling. When on time wages the usual weekly pay is from 18*s.* to £1, though in dull times wages will fall as low as 12*s.* In harvest time the practice is to pay a wage for the harvest months, which works out commonly from £1 to 24*s.* a week, together with a considerable allowance of food and drink, viz., bread and cheese, with beer or some other drinkable. When cutting, binding, and stacking corn by the acre 4*s.* to 5*s.* a day is a common earning. In many cases men stipulate that the harvest wages shall be paid for a certain number of weeks, which holds good whether the harvest lasts that time or not. In Berwickshire, Donegal men are employed, but not to the same extent as in the Lothians. In West Lothian they are not much needed after the corn harvest." Then lower down: "The savings of the Donegal workers are not easy to estimate, as these depend, necessarily, on the regularity of employment, the wages received, and the disposition of the individual workers, but, so far as can be estimated, a good, steady worker, with fair luck, will save from £12 to £15 during the season of from five to six months"?—In putting it at 12*s.* I mean putting it on time.

41543. The point arose when, in answer to Sir Francis Mowatt, you said labour was very often difficult to get. The explanation is that as long as men can go back after five or six months in England with £12 or £15, and sometimes more, saved, they are not likely to go out of their way to take local employment?—Of course men who earn £1 a week by task-work, like mowing hay and all that kind of work, would not. The enlargement of holdings can, I believe, where grass lands adjoin small, poor holdings, be carried out advantageously, and, provided proper steps are taken to ensure that proper use is made of the grass land so added, such enlargement would be beneficial. Great precautions should be taken against sub-division and against constant meadowing, and unless this is done the added land will be ruined. It is quite impossible, absolutely, to prevent sub-division; it can be kept in check, but the present powers of the Land Commission are wholly inadequate for the purpose, and the idea of rate-collectors informing about it is ridiculous. The enlargement of holdings was tried on a very small scale by my late father, in 1870, in Cloonsuck. He then cut up a portion of a grass farm and added it to a number of adjoining small holdings. It has on the whole worked well, but, though everything possible was done to prevent sub-division, still such took place, and has been now sanctioned by the Estates Commissioners. The added land has, of course, been kept in grass by the tenants, as no doubt will be the case nearly everywhere. On what was till recently my Belanagare Estate a large quantity of grass land was, last May, cut up among the tenants, and this year most of it was used by them for meadow, and unless the constant meadowing is prevented the land will be ruined. One result of the cutting up of the grass lands on a large scale in the Belanagare district has been to reduce the price of hay, there being no buyers. I have this year (largely to help tenants) bought hay at £1 per ton, whereas formerly the price used to be double this. If all the grass lands were cut up there would be no market at all.

41544. Sir ANTONY MACDONNELL.—I understood you to say that this is an indication that splitting up this grass land will be injurious, as they won't cultivate it?—They won't.

41545. In regard to keeping this grass land in meadow, was not it a fact that the land to which you refer was only split up in April or May?—Yes.

41546. Is not it a fact that it was not then fenced and could not be grazed?—Yes.

41547. And the only use they could put it to was meadowing?—Yes.

41548. Is it not also a fact that since then the purchasers have at their own expense made the fences?—Not entirely their own expense. There have been grants to help them.

41549. Mainly at their own expense?—Largely at their own expense.

41550. It is mentioned to me here on the authority of the Estates Commissioners that on many of the estates that have been bought, such as the Henry, Bodkin, Clanmorris, and Lansdowne estates, the tenants who have been given these untenanted lands have themselves made fences and brought a considerable quantity of land under cultivation?—I can't answer for the others, because I don't happen to know them.

41551. I myself have seen land brought under cultivation in the West of Ireland, in Galway?—I may say that in Roscommon very little of the sub-divided land is brought under tillage, and with regard to the fencing, that is done; you will have the meadow this year despite the fencing.

41552. That is a prophecy?—I can see it growing. I was down there four days ago.

41553. What you say here cannot be taken as an argument as to the future, because of the reason that I give that it was too late to do anything except meadow last year, and the present year they have only made fences, and, I assume, brought some land under cultivation?—Out of the 400 acres I saw when down there some days ago I saw only one plot under tillage, and I asked what it was, and they said, "Oh, some fool of a fellow has broken up that good land to till." The plot was a rood

41554. Most Rev. Dr. O'DONNELL.—If a tenant wanted to till would he not experience for the first few years on going into his new holding great difficulty?—Yes.

41555. He would not do much at first, because he would require capital for tillage on a large scale?—He would let the grazing. He is used to it.

41556. Even if he is disposed afterwards to till?—I don't believe he ever will till, because I think it will be the wrong thing to do with this grass land, a great deal of which is fattening land

41557. My point is that for the first couple of years he does not do much, but one must not conclude that he would not till afterwards?—No, I suppose not: but what I call attention to is the tendency not to till. I think it is an advantage to them to have a bit of grass, as it is an adjunct to their holding.

41558. Mr. SUTHERLAND.—You say it is easier to let in grass?—Yes.

41559. And you say it is the most profitable?—Most profitable.

41560. Sir FRANCIS MOWATT.—I don't quite understand what you said just now about destroying the

* See Appendix to Second Report of the Commission [Cd. 3319, 1907], pp. 314–5.

market altogether; that hay has fallen from £2 1 a ton?—I don't say that the fall is entirely due is. It is partly due to the good crop.

561. You say that one result of the cutting up of -lands has been to reduce the price of hay, there no buyers, and that you have this year got hay £1 a ton, whereas formerly the price was double and if all the grass land were cut up there would o market at all How is that consistent with the y that the cheapest and best way to treat the is to keep it in grass?—As long as there is a ket even at £1 a ton it will pay a great deal than the annuity, because this land is being let hem at 15 shillings an acre, and some of them to pay £4 an acre for it.

562. Sir FRANCIS MOWATT.—What do they get he acre?—From three to four tons. This is fatng land, some of it, and is as good as any down e. The reason I am putting this here—and I y that some of the Commissioners will agree with is that the Estates Commissioners should have e power to see that the land is properly used, be- se there is very great danger that some of the ller tenants, the poorer ones, will ill-treat the land ontinually meadowing it.

563. Sir ANTONY MACDONNELL.—What power ld you give, and what would be the sanction of power?—There is one way that it could be done.

564. Is it that they would sell them up?—Yes.

565. Is that possible?—Or not vest it until after interval of three or four years.

566. Is that possible?—It is difficult. You can a great deal by holding the vesting order up for a ain period.

567. You would have to vest in the end?—Yes.

568. In the meantime who would pay the interest he loan?—The man in occupation.

569. You would get the 3½ per cent. out of him, you would vest it ultimately?—If the man gets the right way of doing things for four or five rs he will probably continue it.

570. CHAIRMAN.—Does the annuity so far as ulti- e ownership is concerned begin from the vesting r?—Yes That is postponing it, but with legis- on you could make the annuity start straight off. could make provision for that, because it is only nancial matter.

571. Sir ANTONY MACDONNELL.—I am afraid that must look to the growth of self-interest?—I think s a difficult question. No doubt there will be a culty over this. They will use most of this land hat way.

572. You say with all the power your father posed he was not able to stop sub-letting?—No. I 't think you can help it. The only thing is to be careful in making your holdings such that they n't be easily sub-divisible. If you give a man a here (*indicates on plan*) close to his holding, of able size, as sure as fate you will have this turned a separate holding, too.

573. CHAIRMAN.—Probably there will be failures ong these people as among any other class; but why uld we imagine there will be all these difficulties en we are faced with the fact that in the case of se people whom the Congested Districts Board has eady established on small holdings there have been mparatively few failures, if any; the great maity have succeeded and are succeeding very well?—I must remember that in the past there has been a at deal more care taken in the selection of the ht man than there could be in the future.

574. Why do you say that?—Because it is proed to do it on such a huge scale.

575. Is not it probable that as there has been h an insufficiency of land, they have not been able take all the available people?—That is probable.

576. Again: has not there been a considerable ejudice against migration, a prejudice which is owing less?—It is said to be growing less.

577. If the prejudice grows less, and there is a ater amount of land available, is not it quite nceivable that the Congested Districts Board will able to accelerate the migration operations conerably without running the risk of removing untable people?—I think they will move unsuitable ple. They cannot help doing that. It is only a stion of the community.

578. It is a very curious thing, as Mr. Doran plained to us, that the very people whom they have moved up to now were to a very large extent unsuitable, and were not the people whom he would have liked to remove if he had any choice. He told us himself that a good many of the people he thought most suitable were not willing to move. They had a stake in their present holdings; they were doing fairly well, and for that reason they did not want to move. To get migrants he had to go very often to people who were not succeeding very well in their then existing conditions, yet those people when moved have done well?—You hear it said—I cannot say that I personally have very much knowledge of the matter—that the migrants, as a rule, are doing very badly.

41579. Mr. Doran tells us that they are doing very well, and he ought to know?—About Roscommon they are nearly all keeping it in grass, whether rightly or wrongly. I would say it is right.

41580. Most Rev. Dr. O'DONNELL.—Are those migrants who have come under the auspices of the Congested Districts Board or of the Estates Commissioners?—Some of both. You will see some tillage round the house, a sufficient quantity for their own use. Oats and potatoes are the only things I have seen generally. I don't wish to press that too far, because in the earlier stages it is more or less necessary that that should be so.

41581. You agree that even if tillage is to come, the first years are the difficult ones?—Yes. I quite admit that. I don't want to press too far what has happened.

41582. Mr. KAVANAGH.—Have you ever thought of the question of communal grazing?—Yes. It comes a little later on.

41583. CHAIRMAN.—Mr. Doran gave us a few instances from the Port Royal estate. They are mentioned at page 314 of the Appendix to our First Report.* In the first case the rent of the old holding was £9 8*s.* 6*d.*, and of the new holding £10 16*s.* 7*d.*, and the annuity was £7 10*s.* That was what he called a desirable man. The second man was also a man of that class. The next is a woman, Catherine Prendergast. The rent of the old holding was £1 10*s.*, and of the new holding on which she has been put £11 6*s.*, and the annuity is £7 7*s.* 2*d.* All these people are doing well. In another case where the old rent was £2 15*s.*, the migrant was put on to a holding the rent of which was £14 3*s.* It shows that they can be put into much improved circumstances, and apparently succeed in them?—I don't know anything about the particular cases, but it may be that that woman was specially picked. It may be that she had some means outside her holding. They must have been very hard up for migrants if they took a woman who paid a rent of £1 10*s.*, and had no other means.

41584. I saw myself the other day the case of a widow who had two or three small children, who had been migrated to an estate on the borders of Mayo, and apparently she was put into an old lodge of the demesne, and she was doing perfectly well. She got her neighbours to come and help her to till, and she was paying her annuity all right?—She had nothing to start with?

CHAIRMAN.—Nothing at all except three young children.

41585. Sir FRANCIS MOWATT.—She had four head of cattle?—Again, where migration takes place, the new occupier should be supplied with ample capital. Up to the present this has not been done. He has generally been transplanted with little or no capital, and with very little knowledge of how to use his new farm. He will naturally use it as a small grass farm, with only sufficient tillage to provide for his family wants. A large portion of the Roscommon grass farms are unsuited for tillage. They are cold and sticky on limestone, but are good for grass. The only tillage crops that are grown to any extent in Roscommon are oats and potatoes. The grass lands are bad for both of these. I am dealing with grass lands generally there, because some of the grass lands are not bad, but I think on the whole that these Belanagare grass lands would not be at all suitable for tillage. Again, the difficulty of turf and water is almost insuperable. It has already caused enormous trouble.

41586. Do you mean there is no turf?—In the grass land district lying between Castlerea, Roscommon, Strokestown, and Balanagare, there is practically no turf at all.

*See Appendix to First Report of the Commission [Cd. 3267, 1906], p. 314.

June 10, 1907.

The O'Conor Don.

41587. Sir ANTONY MACDONNELL.—Are not there other tracts in Ireland where there is no turf, and yet they import either turf or coal and get on; in the neighbourhood of Limerick, don't they import coal?—Yes, but you have a very different class of farmer in the neighbourhood of Limerick. In Limerick they have almost entirely gone in for grazing, dairying. If that is what you are going to establish it is a different question.

41588. I merely refer to the absence of turf. There are parts of Ireland where you have no turf?—It might be a result of the absence of turf that you have not got small holdings but have got big dairy farms. I know Limerick a bit.

41589. Mr. KAVANAGH.—Take the County Wexford. It is a county of small farmers, and there is hardly any turf in it?—They are near the sea, and the coal would be fairly cheap.

41590. Take places further inland. Take Carlow and Kilkenny. There is no turf practically in either of these places; they import coal?—You are not dealing with men who have been accustomed to have turf at their doors.

41591. Yes; it has been cut out?—It is creating a difficulty.

Mr. SUTHERLAND.—This difficulty of turf is an old friend. We have heard of it two or three times. We recognise it.

41592. Sir FRANCIS MOWATT.—Then there is the water difficulty?—Yes.

41593. Owing to the extreme dryness of the climate?—No, but on some of the grass lands there are no rivers or streams. Either the Estates Commissioners or the Congested Districts Board on some farms near Ballintubber had great expense in providing water.

Sir ANTONY MACDONNELL.—These things are not beyond the resources of civilisation. These same difficulties have been solved by the Estates Commissioners on estates that they have bought.

41594. Mr. SUTHERLAND.—They could readily sink artesian wells?—Yes; but it all adds to the difficulty of re-selling at a price that would be at all fair to the owner.

41595. Most Rev. Dr. O'DONNELL.—If under cattle, would not the water difficulty equally exist?—No; when you have a 200 or 300-acre farm under cattle, you have water here on the 200 or 300 acres, and you can water your cattle that way; but when you divide it up into twenty or thirty small holdings, as you have done in this case, you wont have water for each plot. There was a lot of trouble even there, although it was a well watered farm.

41596. Does not that point to the conclusion that the well in the district should be reserved for all the occupiers?—You might have some trouble over it. There has been trouble over it already I know.

41597. Would not it be possible to use the bog of Allen and boat turf up to Roscommon?—There is no waterway.

41598. Is not there a canal into the Shannon?—Yes.

41599. Would there be no way of getting turf from the Shannon to Roscommon?—No. It is too long to cart. You have got turf nearer than that.

41600. The railways would not be available for that?—It would work out at too extravagant a figure for carrying turf. Mr. Fitzgibbon sees the difficulty about the turf, and suggested pressing the turf as a means of overcoming the difficulty, but the pressing of turf does not so far seem to be a success. Near Limerick they got some machinery for pressing turf and so on, but they never went further as far as I know. There is plenty of turf further west, but it is very expensive to cart.

41601. CHAIRMAN.—Surely these things are only difficulties which may have to be considered in fixing a price or the annuity of the tenant. They are not insuperable to farming the land?—Probably not.

41602. The Bishop's suggestion about having the well common to all the estate would get over the water difficulty at once. There might be friction, but it would be possible to do it?—In a great many cases they could. I am putting these as difficulties. I don't say that they are insuperable, but they are things that have to be considered. There are a few places where I don't know how they will get over the water difficulty. About Ballintubber, it cost an awful lot already.

41603. Sir ANTONY MACDONNELL.—These are grazing tracts?—Yes.

41604. And the cattle had to get water?—You may have grazing farms where the water is all right, and when you divide it up into a lot of small holdings there will be great trouble in working it.

41605. The water is there; it is the difficulty of carriage?—Yes.

41606. CHAIRMAN.—I suppose, as far as the cattle are concerned, you could have a dam?—You could in some places. I know the difficulty that was caused in settling this land on account of the water. It was a very well watered farm. I know in Ballintubber the Board spent a lot of money, making huge fences cutting up in what otherwise would be an improper way to get over what would otherwise be the difficulty of water. Another objection to migration on a wholesale scale is, that the people of the district, even when their own holdings are not very small, greatly resent the introduction of strangers, and great friction will arise if they are brought in. The idea of giving everyone as much as they want is, of course absurd. In Roscommon the people naturally say that Roscommon men should get any land that is to be divided. My sympathies are with them. I think it is only natural that the people in the district should want what is going.

41607. Your sympathies may be with them, but if you give effect to them you would not get very far with your remedy for congestion?—Yes; but it is a difficulty you have to face. It is not only the very congested holders who object to strangers coming in but also the sons of quite well-to-do people.

41608. But you will admit that if you were to encourage that feeling you would never be able to relieve congestion?—Quite so; but I can quite understand it.

The Commission adjourned.

EIGHTY-THIRD PUBLIC SITTING.

TUESDAY, JUNE 11TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At 35, Dawson Street, Dublin.

esent:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

The O'CONOR DON further examined.

June 11, 1907.

The O'Conor Don.

41609. CHAIRMAN.—You dealt with migration yesday?—Yes, and before I go on again I wish, both justice to the Estates Commissioners and myself, correct a wrong impression that seems to have been ated outside by some of the evidence yesterday. is stated in the Press that the Estates Commisners allowed me to sell uneconomic and congested ldings without providing grass land, and that I was aining the grass land in order that I might extort at I considered a reasonable price. I may say, so as the reasonable price is concerned, that I acted the figure put on it by the Estates Commisners, and the only reason why this extra grass d was not taken was that none of the tenants nted it.

41610. That is the patch you were speaking of sterday?—Yes, the 145 acres. It was not in any y retained in order to extort what I considered a sonable price. It is true there was some bargain ut price, and my father considered some of the ces put on the land too low.

41611. Sir ANTONY MACDONNELL.—I may say I was nisant of the transactions between the Estates mmissioners and your father, and the impression veyed in the Press is entirely misleading and irely wrong?—I only wished to correct what I was posed to have said yesterday. Then, again, with ard to the labour in England, I forgot to mention t the people who go to England have practically hing to do in the winter months, and in comparing figures that has to be allowed for, I do not know is very accurate.

41612. CHAIRMAN.—I suppose there is nothing lly to prevent them working in the winter in Ireld, and they can earn the higher wages in the mmer in England?—Of course they can earn higher ges in the summer in Ireland also.

41613. What have you to say regarding the supply grass lands?—There are at present thousands of es of grass land available in Galway, Mayo, and scommon, if a fair price is paid. I know myself ny cases where the land can be obtained, and no onger proof of the supply being greater than the nand exists than that the Commissioners had to e back to me 185 acres which they had agreed to , and were getting at their own valuation. This d is still available.

41614. Sir ANTONY MACDONNELL.—In view of what s passed, I presume you will not insist on the clusion you have just stated?—I will insist on it this extent, that I say if you want the very best d for migration purposes, this fact has no bear:, but if you want grass land, taking the rough h the smooth—because you took the very best kind land from me—then I say there is no reason for ang you can't get all you want.

41615. Is that the Carrowreagh farm?—Yes.

41616. The reason it was given back was because it s impossible to do anything with it. It was a wet mp which nobody would take?—That is what you ted yesterday, but I wanted the Commission to e down and see it. You have stated it is a wet mp, and I would like to refer to the report of the two inspectors of the Estates Commissioners who inspected the farm.

41617. At any rate, that was the ground on which the Estates Commissioners refused to take it?—I do not know what grounds they had for refusing to take it. All the reason they gave was that they could not get anybody to take it. But the report of their inspectors, which report I have here, is to the effect that the farm is very suitable for the enlargement of small holdings adjoining. That is their own report after two inspections.

Sir FRANCIS MOWATT.—It is not the Estates Commissioners' own report. It is the report of their inspectors.

41619. Sir ANTONY MACDONNELL.—The argument you place here is that the Estates Commissioners have refused to take certain land which was available for them?—Yes. Quite so.

41620. Which shows that the supply of land offered to the Estates Commissioners is greater than their demand. Now I ask you whether you are aware of the fact that the Estates Commissioners approached 161 owners in County Galway, 115 of whom refused to allow the Estates Commissioners to have any estimate formed or furnished; in County Mayo they approached 115 owners, of whom ninety-four refused to allow any estimate to be formed, and took no notice of the Commissioners' letters; in County Roscommon they approached 116 owners, ninety of whom treated the Commissioners' inquiry in the same way; so that, all told, only 5,235 acres of land in Galway and Roscommon and 3,757 acres in Mayo have been reported upon by the Estates Commissioners. That, I submit to you, is a complete refutation of the statement that the supply of land offered to the Estates Commissioners is equal to their demand for it?—Well, then, how explain the fact that what they had offered to them at their own price they did not take. I further say here is a body coming forward and openly saying, "We cannot pay for what we have bought already, some thirty-five millions worth of land," and then they send out notices admitting the impossibility of payment, and saying we want to buy more. Is there any other body in the world that would do that?

41621. Don't they pay from the time of purchase?—No, not for a long time afterwards.

41622. Don't they pay interest from the time they take possession of the land and allow you to collect the rents from the tenants?—The interest they pay is 3½ per cent. on the purchase-money, whereas the charges and so on on the land are often four and five per cent., and as you have to go on paying these charges in full your margin is cut down to nothing, and you have perhaps got nothing to live on for two or three years.

41623. Mr. SUTHERLAND.—Are these charges not paid before the negotiations are carried through?—Not at all. There may be mortgages and such like, and there are management charges.

41624. Sir ANTONY MACDONNELL.—But you are relieved of management charges once the Estates Commissioners take over the property?—Yes, once they

June 11, 1907.

The O'Conor Don.

take it over, but as a rule what happens, as you are probably aware, is that they take it over within a month or so of the day they are ready to pay in the purchase money. Perhaps they do not take it over until they are just ready to pay the purchase money. I know in my own experience you have to pay a collector, because it is ever so much more troublesome to collect. You do not get paid in full, and the losses in our case were about two years' income.

41625. But when you have not received the purchase money you are getting interest?—You have not received the purchase money and you are getting interest in small quantities, and if you are an owner with mortgages and charges you are in the greatest difficulties.

41626. Sir FRANCIS MOWATT.—Is that owing to the small amounts paid, or the low rates?—You get low rates, and you have to collect it as best you can. Of course, eviction proceedings and such like are out of the question, and in the case of sales under section 6 till the matter is finally closed you are done out of a very large portion of your income. Of course if you are a man of means and not living on a mere margin it is fairly all right. But I say here is a body coming forward and saying we have got some thirty-five millions worth of land promised to us. We cannot pay for it, and we think it unreasonable that people should not offer us more. I say let them first pay for what they have, and there is a good deal of grass land in the thirty-five millions worth. The real difficulty is a financial one.

41627. Most Rev. Dr. O'DONNELL.—If it be reasonable for the owners to object on the financial ground, and if the owners consider that the delay in the distribution of the purchase money is a sufficient reason why they should not come forward with offers of land, do you not consider that the Irish taxpayer has a much greater reason for being chary about future purchases?—Well, I think the finances of the Act are framed in a way that is decidedly disadvantageous.

41628. You are a taxpayer yourself?—I am.

41629. And there should be representation to correspond with taxation?—If you can have it.

41630. Is it not a fact that we have it now from the Government, according to a statement in Parliament, that the expenses of the flotation of Land Stock and the banking losses in connection with that flotation all fall on the Irish taxpayer?—Quite so, and there is a quite unnecessary loss of about 8½ per cent.

41631. You consider it an unnecessary loss?—Yes, when you take the price of Consols and the price of Land Stock. Take Consols at, say, 85, then Land Stock ought to stand at 93½.

41632. Sir ANTONY MACDONNELL.—You think Land Stock ought to be 93½?—Yes, if Consols are 85.

41633. Why are they almost equal?—Because of the way the matter is done. If the money was procured in a way that it would not be called Land Stock it would stand near the figure I suggest. It is really England that gets the advantage of this, and the Irish taxpayer has to meet this loss of 8½ per cent. owing to the way it is doled out. If it was raised as Consols you could get it at Consols' price, that is to say for every 2½ per cent you would pay 85, whereas they are now 85 at 2¾.

41634. Most Rev. Dr. O'DONNELL.—In the main there are two sources of loss?—Yes, they come out of the Irish funds, and mean 8 per cent.

41635. There is the discount and the bank loss?—Yes.

41636. Both of these losses ultimately fall upon the Irish taxpayer?—Quite so, or come out of the Irish Development Fund.

41637. Either out of the Irish Development Grant, or grants-in-aid?—Yes.

41638. And therefore in the end the loss on the flotation of Land Stock comes on the Irish taxpayer?—Entirely.

41639. Then don't you think, as an Irish taxpayer, that whether bargains are good or bad henceforward the Irish taxpayer ought to have a voice in all bargains?—I think that would be very difficult to work out, and you would get very few bargains if you had such a system in operation.

41640. I put it to you that the Irish taxpayer is being taxed in every single instance in which land is bought?—I would try and do away with the taxation, and that would be the simpler way. There are d[i]culties, but I think it could be done.

41641. I put it to you disjunctively; either this l[a]to the taxpayer should be done away with, or the t[a]payer given a voice in the incurring of the loss?—I think if you give the taxpayer a voice you will k[i]the whole scheme.

41642. I have no doubt, but is there any way [o]of it. Whether the land is sold to the tenants [o]the landlord cheaply or dearly under the existing [a]rangements the Irish taxpayer must lose?—Yes.

41643. There is no way out of that?—No.

41644. So it comes to this: if representation sho[u]go with taxation either the loss has to be got rid [o]or the taxpayer has to be consulted?—Well, of cours[e]you have representation and representation, and i[n]sense you have representation now. I think if y[ou]are to elect a body throughout the country to deal wi[th]this matter you would kill sales at once, and I thi[nk]one must look at the matter from a practical poin[t]view. If you have a debating place where every[one]expressed his views on every proposed sale, why [a]sale would ever go through.

41645. I quite admit that, but if it be reasonab[le]for owners to say that the distribution of the pu[r]chase-money being so delayed justifies their bein[g]tardy about offering their land, is it not equal[ly]reasonable that the Irish taxpayer should come fo[r]ward and say until this question of the loss incurr[ed]in the flotation of Land Stock is satisfactorily settl[ed]there should be no purchase and no sales?—You migh[t]say that, but I doubt if the majority of taxpaye[rs]would express such a view. In numbers, if you h[ave]everybody that paid taxes, possibly so, but if y[ou]have one vote, or so many votes for every million [of]taxes paid, I think you will find the taxpayer v[ery]not object.

41646. Your view is that the Irish taxpayer ought not to bear this loss?—That is my view, undoubtedl[y]and I think there is a waste of eight per cen[t]roughly, on the present system which could [be]avoided.

41647. But the loss is much more, the discou[nt]alone is more than that?—I am taking the differe[nce]between Consols and Land Stock.

41648. In this matter we are not at all deali[ng]with losses in connection with nonpayment of annu[i]ties?—No, not at all.

41649. CHAIRMAN.—What are your views on migr[a]tion?—No doubt migration and the enlargement [of]holdings to a reasonable extent can be carried o[n]and will help to relieve congestion; but more mo[ney]must be spent over it, and in starting the new oc[cu]piers, than has been yet done. To my mind, one [of]the most useful ways of helping small tenants in [a]district where there is grass land near would be [to]the Congested Districts Board to buy the grass la[nd]and let the grazing to the tenants at low rates. T[he]land is grazed much more economically in this w[ay]than if it is cut up into small plots. Even if migr[a]tion on a very large scale is possible, plenty of gr[ass]lands will still be available, if a fair price is giv[en]and no great delays occur in carrying out a contrac[t].

41650. Sir ANTONY MACDONNELL.—To what ext[ent]do you think the Congested Districts Board could [fo]low that plan of grazing?—I think they could fol[low]it considerably in the districts where there are sm[all]holdings around the grass lands. I do not think t[hat]is at all unpopular.

41651. In the part of Roscommon with which [you]are familiar, for instance, the 40,000 acres that [I]mentioned yesterday, do you think the Board co[uld]adopt that plan in respect of those 40,000 acres?—Oh, no. I say that the plan could be adopted [a]good deal, and is being adopted.

41652. Could it be adopted very largely, for [in]stance, if the Congested Districts Board bought, s[ay]50,000 acres? Could they graze that without a lo[ss]Could they get from the grazing rents the percent[age]of 3¼ per cent. which they have to pay on the purch[ase]price they had to give?—I should have thought t[hey]could do as much again. Mr. Doran's figures, on p[age]50, show that they make a large amount.*

41653. That is to say on the quantity of land t[hey]deal with, and that is limited?—£25,000 a yea[r]very substantial.

41654. My point is in regard to where the Bo[ard]buy an area of 50,000 acres, could they be ass[ured]they would not lose on it in the interval betw[een]purchase and distribution?—I think they could [do]that, but I do not think they could permane[ntly].

* See Appendix to First Report of the Commission [Cd. 3267, 1906], p. 50.

graze the whole 50,000 acres. Of course I do not know what they paid for this land or how many acres are in it, but £25,000 a year must represent something between 15,000 and 20,000 acres.

41655. I remember the reference to that, but I think they stocked their own farms. The Congested Districts Board do not merely take in cattle, but graze and stock their own farms?—I know, but there is considerable anxiety to get this grazing because the Board can give it at considerably less than it used to be given. They charge about one-third less, and I know it is a popular system. I am quite sure the tenants round some of these grass lands would much prefer to get the grazing than to have a County Mayo man brought in if they had that alternative.

41656. Most Rev. Dr. O'Donnell.—It is a great advantage for men on small agricultural holdings to have facilities for grazing their stock, even at a distance?—Yes, and at a low rate, too. I am quite aware that part of this proposal may be highly disapproved of by some landowners who say the Congested Districts Board have cut down the grazing rate all over the place.

41657 Sir Antony MacDonnell.—They would not object if their land were bought?—Oh, no, but they object very much to the rate for grazing. Of course, looking at the matter from the point of view of the good of the country they must submit.

41658. Mr. Kavanagh.—Could they permanently graze smaller areas?—Yes.

41659. Don't you think that would be a great advantage to the people around?—Yes, I think it would be a great advantage.

41660. Such grazing might enter into a scheme of migration?—Yes. You might give a man a patch for tillage on his small holding with the right to graze so many head of cattle at a certain price. The rate would be low on account of the adjoining land being unsuitable for cutting up. I fancy there would be a good deal unsuitable for cutting up, and if there is any scheme of purchase that in justice to the owner will have to be bought because you cannot take field A and leave field B. You will have to take the good and the bad.

41661. How many miles away would people take grazing rather than migrate?—Well, I know at present cases where they take grazing four or five miles away, but I think that is rather too far.

41662. Do you think so?—Yes. I should say two or three miles would be sufficient.

41663. I should have thought they would have gone further?—Yes, but I am talking of permanent settlements, and not temporary.

41664. I also mean a permanent settlement?—I think you could not go beyond three or four miles. I think it would be unreasonable to ask them to go further, and there would be difficulties with the adjoining owners if they had to go very far. They would say we must have this grazing, and you must not come in here.

41665. They might say the same in the case of migration?—I think they would.

41666. Most Rev. Dr. O'Donnell.—You think Mr. Kavanagh's suggestion a practical one?—I think it is to a limited extent, but I do not think it will solve the whole question.

41667. No, it would be one of the expedients?—Yes.

41668. Would you consider that small occupiers could with advantage graze their stock four or six miles away?—I put it at three or four, because I think when you run to six you are met with difficulties. There would be a feeling among the people where the grazing was against bringing in what they would call strangers. I happen to know of instances where the people had to go from eight to ten miles where there was that difficulty. I think that in the case of a man who had only gone four miles he would not be considered as such. Then there is the driving of cattle and attending them at a great length and I think that would create difficulties.

41669. I think we have it from Mr. Doran's statement that for a time, at all events, that system was being carried out at a greater distance than you contemplated?—Quite so; and I say temporarily you may do it at a greater distance, but permanently I doubt it.

41670. I do not mean the joint management of grazing lands by a community, but the providing of facilities for grazing stock at a distance?—Yes.

41671. Mr. Kavanagh.—Are you aware that in grazing sheep a man will go into another county and take grazing permanently year after year?—I daresay.

41672. Mr. Sutherland.—Do you consider that the Congested Districts Board should retain these grazing lands and let them each year. Let them to the tenants each year at low rates, or sell them?—I would say to let them.

41673. The Congested Districts Board would therefore require to be a continuing body for the purpose of administering that?—Yes. I assume the Congested Districts Board is likely to be a continuing body for a great many years yet, or if not, then the Estates Commissioners, or whatever body you have dealing with this. There is no immediate prospect of discontinuing either of these Boards.

41674. It would be an entirely new function for them?—No; they are doing this at present on a large scale.

41675. But it is only being done for a time?—That may be.

41676. Most Rev. Dr. O'Donnell.—It is being done now for a time. Mr. Doran's idea was that this suggestion in itself familiarised small occupants with lands to which they might afterwards migrate?—Yes.

41677. It was not in contemplation that the land might be held by communities?—Of course, there would be no difficulty in providing the purchase annuity out of the rates charged. You could be gradually paying off capital, and instead of the 3½ it would fall to 3¼. That is a mere paper transaction, and there would be no loss in that way. I now wish to deal with prices, and I say it is clear, from Mr. Doran's figures,* that up to the present the Congested Districts Board have made remarkably good bargains. As long as they have the lands in hand they receive £25,000 a year as grazing receipts for land valued at £16,500 a year, for which they pay the Land Commission much less than they receive. They do this even though they let the grazing at 30 per cent. less than the usual prices, and, as regards lands which they farm themselves, owing to the magnitude of their operations, they cannot do it with the same care as regards buying stock as the ordinary grazier. Their own figures prove conclusively that the land is worth more than they are giving for it.

41678. Sir Antony MacDonnell.—You say that the Congested Districts Board make a very good thing out of the grazing?—Yes.

41679. And the Board charges 30 per cent. less than the ordinary grazing rents?—Yes.

41680. Now, if the Congested Districts Board make a very good thing out of the grazing, and let their grazing 30 per cent. less than the ordinary grazing rents isn't it the inference that the ordinary grazing rents are at least 30 per cent. too high?—No. The inference is that they made a good thing because they bought the land 30 per cent. too cheap.

41681. Allow me to point out that they bought lant at about 29 years' purchase of the Poor Law valuation of £16,500, and the Poor Law valuation is about the same as second term rents?—Yes, but you must remember that you have also owners' and occupiers' interests to deal with, which makes a difference.

41682. We have heard a good deal about that, but I ask you to think over this point, because I think it is a difficult one for you to explain. On your own admission, you show that the landlords are charging 30 per cent. too high for grazing lands, the argument being that at the price at which the Board bought, which is based on the Poor Law valuation (and the Poor Law valuation in Roscommon is about equal to second term rents), the Board are making a good thing out of it?—And the Poor Law valuation in Roscommon in particular being admitted, in one or more Government statements, to be about 5s. in the £ lower than it ought to be. It has been stated by eminent valuers that if there was a re-valuation the Poor Law Valuation in Roscommon would be raised on the average 5s. in the £1.

41683. Isn't it a fact that your father sold land at a basis of 15 per cent. under the Poor Law valuation, and accepted that as a fair rent?—It was I who sold in fact. But if you saw the correspondence I do not think you would say it was accepted as a fair rent. It was accepted under the quasi compulsion that Lord

June 11, 1907.

The O Conor Don.

Dudley has spoken about. Once you get into negotiations you cannot go back.

41684. Mr. KAVANAGH.—When you speak of landlords charging so much for this land is it not as a matter of fact put up to auction and the highest bidder gets it?—It sometimes is, but, as a rule, before the Congested Districts Board came down there was a difficulty in refusing grazing. You had grazing more than you could take at the rates charged, and I do not see how it is fair to argue that because you are charging prices that everybody is willing to give, and prices that obviously pay them to give, that it can be said those prices are excessive because a certain body has been able to buy some land at a fixed price, and can make a profit even while charging lower rates on that price. Surely the only true conclusion to arrive at is that the price paid by the Board is a low one because they can let the grazing at less than the ordinary rates. To my mind it is absurd to say that the rate for a particular article is too high when you have hundreds ready to come in and give a particular price for it.

41685. Most Rev. Dr. O'DONNELL.—I do not see how that agrees with your statement. You say the Board receives £25,000 a year for land valued at £16,000. What valuation do you allude to?—To Poor Law valuation.

41686. The Board receives £25,000 a year for land which is valued in the Poor Law valuation at £16,500?—Yes.

41687. Do you think that is an excessive margin?—In what way an excessive margin?

41688. The Board must have interest on the money which they expended on the purchase of the land?—Yes, interest on the purchase money will come to even less than the Poor Law valuation.

41689. They pay the Land Commission much less than they receive?—Yes, and much less than the Poor Law valuation, I fancy.

41690. Have you the figures?—I have not. Mr. Doran did not give any figures. He stated they paid less.

41691. Do you contend that the difference between what they receive and what they pay would be anything like the difference between £25,000 and £16,500?—I should have thought it would be greater, but I cannot tell you; Mr. Doran could give the figures.

41692. It would be important to have the figures?—It would, and I really quoted this for an argument later on. But taking it that the experts to whom Sir Antony has alluded say the land is worth, as tillage or cut up, as much as it is worth as grazing—they say more, but I am satisfied to take it equal value. I say they buy at this price, and they are able to make one and a half the Poor Law valuation out of it as grazing, consequently if it is worth as much cut up the fair annuity would be at least one and a half the Poor Law valuation. I do not see any way out of it.

41693. Have you made deductions for management in that statement?—Well, I put the bonus against that, the costs of selling, and so on, because once you have sold to the tenants there is no question of management.

41694. I think you will find that the bonus has been already calculated in the advantage which the Congested Districts Board receive. You say they receive £25,000 a year for land valued at £15,000?—There is no bonus in that. That is what they receive as grazing rents, and I say, assuming that the rents will come to as much as that if cut up into holdings the holdings' rent of the land would be £25,000 a year.

41695. Sir ANTONY MACDONNELL.—I beg your pardon for interrupting you, but I do not think so. That £25,000 a year includes the profits of stock bought and sold?—I am quite prepared to admit that, and it is a great help in my argument, because it cannot then be said, so far as stock is concerned, that the price charged is too high. It shows you are using this land yourselves and making profits on stock bought and sold, and that you can make this clear profit. The argument of all the experts who are in favour of these divided holdings is that the land will give even more profit if cut up. But I say, to take it at the same figure of £25,000 a year, the land will produce in annuities £25,000 a year, and that would be enormously above what the landlords have suggested.

41696. Most Rev. Dr. O'DONNELL.—If the outgoings are £16,500, and the income £25,000, you have only the balance between the two for all manner of profits on the transaction. If the land is divided among various holders, do you think that is an excessive profit to enable families to live?—No, because the families are living then on cut-up holdings. In calculating the profits on cut-up holdings I do not altogether agree with some of the experts, who say that the actual profit out of the holding, allowing a man for his labour and everything, will be more than the grazing rents.

41697. Sir ANTONY MACDONNELL.—I did not understand them to say that at all. What I understood them to say was that the income produced from agriculture would be more valuable than if produced from grazing. But from the produce of agriculture you have to deduct the costs of labour, which are infinitely greater than the costs of grazing?—And therefore you conclude that is the more economic way of using the land. It is what I was contending yesterday, but I do not think you agreed with me.

41698. Most Rev. Dr O'DONNELL.—The point I wish you to elucidate is, supposing the grazing receipts from land amount to £25,000 a year, is it not too much to pay out £16,500 in rent?—I do not think so, because the grazing income means practically no expenses. The way the Congested Districts Board let grazing their only expenses are the grazing rent collector and a few herds.

41699. That is paying out two-thirds of the receipts in rent?—But you must remember Mr. Doran says they make a profit of £25,000.

41700. Mr. SUTHERLAND.—Do the Congested Districts Board let the grazing on the ordinary eleven months' system?—No; it is so much a bullock's grass, and that is about £3.

41701. How does that compare with the auction rate?—It would be about 30 per cent. lower. It has reduced the grazing rents throughout the district, and Sir Antony consequently argues that the grazing rents have been too high, but I say no.

41702. Sir ANTONY MACDONNELL.—My argument is, where you have such a profit derived by the Congested Districts Board at low rates *a fortiori* there must be larger profits derived by the landlords?—You have grazing rents bringing you in so much. A great many people say, instead of letting the grazing I will graze the land myself, and they say they can make bigger profits by doing so. I say the land is worth these bigger profits. The men without capital take in cattle, and the men with capital graze it themselves, and I do not suppose there is very much difference in the profits, because if there was you would at once have the people all doing the grazing themselves instead of letting it out.

41703. The reason I asked the question was we came yesterday to the point that the Estates Commissioners and the landlords could not come to terms. The landlords say they are not offered a sufficient price, and then I take advantage of this statement of yours to point out that the Congested Districts Board while letting the grazing at 30 per cent. less than the landlords generally in the district charge, they are able, according to you, to make a very good thing out of it, and that has furnished to my mind an explanation why the Estates Commissioners and the landlords cannot come together?—They let the grazing at 30 per cent. less, and taking into consideration the price they paid, they can well make a profit. The landlord who can make a large profit by putting his own stock on his land naturally says, "I want such a price as will fairly recoup me my actual income," which was so much. I say this proves that the price that they bought at is really below the value, because the land, unless there are disturbances, will yield a good deal more than the Congested Districts Board are getting out of it. But even if it only yielded the same it could stand a larger capital sum as the purchase price. I do not see any way out of that argument.

41704. Mr. KAVANAGH.—Have you any figures to show what the landlords charged for this land valued at £16,500 and out of which the Congested Districts Board make £25,000 a year?—I have not. That will have to come from the Estates Commissioners. I have no way of collecting that information, because it is only from Mr. Doran's evidence that I got these figures, and he did not mention the price; but I think I could safely assume that the annuity did not amount to £16,500 a year.

41705. Most Rev. Dr. O'Donnell.—I would not like ou to assume that too readily for this reason, that he Congested Districts Board have been in the habit f acknowledging the occupation interest as well as he owner's interest in such lands?—Even so, it ould require big purchase money.

41706. Chairman.—Your next point?—I wish to ay as to the possibility of a fall in value there is n equal chance of a rise. The importation of anadian cattle would cut down the price of young ock, and so injure the small man; but it would ather help the grazier with good land, as he could et his stock so much cheaper, and thereby the value f the grass land would increase. There are possibili- es both ways, and it is not fair to discount the price or one and not raise it for the other.

41707. I suppose if they could get their stores heaper the price of the beast when fattened would e lowered?—Not at all proportionately lower.

41708. But the price would be lower?—Possibly, ut still there would be more profit on it, and it would ake the land of the bigger man more valuable, hough it might not be so in the case of the poorer an. There may be protection, but I do not think here is much likelihood of that, but if you are going o take in political possibilities you must take in both des. Then again, at present there is no difficulty when no boycotting) in getting grazier tenants, and any graziers have been grazing the same lands for ears. I may say as to the grazier rents and prices enerally that when you come to ask a landlord who or the past twenty years has been getting £200 a ear for his land on the eleven months' system to ell, he naturally says—and, I think, fairly says—I ust get such a price as will give me that income. he Estates Commissioners as a rule won't give him hat. I quite admit if you have got an occasional razing tenant for a short time at a high rent it ould not be fair to take that into consideration, ut in Roscommon, where the bulk of the grass land s let on the eleven months' system, you have the ame man year after year, although nominally for leven months; in practice the man is a permanent enant. They have been paying these grazing rents nd making a good thing out of it.

41709. Mr. Sutherland.—Would you be willing to ive the eleven months' tenants the privileges of an stablished tenant?—They are made eleven months' enants, no doubt, to avoid that and it would add reatly to the difficulty of relieving congestion if you ere to give them such privileges.

41710. Sir Francis Mowatt.—Under the eleven onths' system the land is nominally in the hands f the owner for the last month?—Yes but it is urely nominally. As a matter of fact, the eleven onths' man stays on.

41711. And his cattle can remain on?—Yes.

41712. Sir Antony MacDonnell.—Your argument s based upon the permanence of the eleven months' ystem?—No, not exactly. My argument is that hen you can get these rents from a man who knows e can be turned out at a moment's notice, and that an can year after year pay a good price for the and, it shows that the land is worth it. It is the trongest evidence you can have of that, and you find t the same time a great many of these men flourish- ng.

41713. Mr. Sutherland.—What could they do other- ise?—What will they do now if the land is taken rom them.

41714. Is not this grazing system a monopoly?—No, ecause a lot of these men did not begin as graziers, ut grew into it.

41715. Quite so, but that does not alter it. You are ealing with a monopoly. There are several bidders or it, and so the owner gets the highest price for his onopoly?—Not exactly. But even if that were a act, these graziers are well-to-do men, and have suc- eeded very well. They are not poor men at all, and hey are willing to continue the system and prosper nder it.

41716. Still they are dealing with a monopoly?—Yes, but they are able to make a good living out of t. You might as well say the same about any pro- erty in the world. The fact that these men are able o earn a good livelihood and to prosper is a strong rgument that they are not paying too much for the and.

41717. We have two classes of tenants. There is the class who have had a revision of their rents by statutory process, and on the whole those rents have been cut down. In the other class the tenants are grazing on the eleven months' system, and in that case you are dealing with rents which have been forced up and are rack rents?—No; I do not think so. I think you will find in Roscommon the grazier has been paying at the same rate all through, and there has been no attempt to raise it.

41718. Isn't there an essential difference between a statutory rent and a rack rent?—Quite.

41719. You must make an allowance for that?—I am not suggesting you should not, but in the case of statutory rents you have an occupation interest which I am prepared to deal with. That is said to be difficult to explain, but I do not see much difficulty about it. In the case of the statutory rent it may very well be said that it has been fixed by a body appointed by statute which came down there for that purpose, but that is not a true test of the value. But where you have people prospering and flourishing for years paying what are known as rack rents, you cannot say then that the land is not worth the amount of rent paid for it. What would be said in England suppose a landlord were getting £200 a year year after year for a farm, and it was said the land was a monopoly, and therefore it must be bought cheaper on that account? It would be said that is the value of the land. It is the same in Ireland where you have an open market.

41720. That has been interfered with, as you know, in Ireland for reasons of public policy?—Quite so. The statute was passed to protect the small tenants, because where you had a big number of them wanting land the rents might be forced up, but in the case of the graziers they are a comparatively small number, and they are men well able to take care of themselves. They are good, substantial men, most of them, and I think they should be left to make their own bargains in the same way as in any other country in the world.

41721. I am content with pointing out the fact that it appears to me your argument was lacking, because it did not take into account the fact that in one case you have the price of rents fixed by statute and in the other you have not that?—Quite so, and I say in the case of the rents fixed by statute you may have an improper rent fixed, but in the rents agreed upon in open market you have a truer price.

41722. Sir Francis Mowatt.—It is a case of the ordinary law of market price—selling in the open market?—Yes, the ordinary law of what the article will bring in the open market. People find they can afford to buy at this price and make a good profit, and that is a true test of the value.

41723. Most Rev. Dr. O'Donnell.—How does that agree with what we know is the case in England that it is exceedingly difficult for the owners of land to let it in such a way as to get large rents for it?—I think you will find that in England, where there are good grass lands, there is not that difficulty; it is where there is tillage.

41724. Chairman.—It all depends on the class of the land?—Yes.

41725. Most Rev. Dr. O'Donnell.—I have been told by the owners of large properties in England that the outgoings on English estates are so heavy as to almost take away the rents they receive for them?—Well, I have had a brother in an English estate office, and he does not bear that out. I say if you have good grass land in England you can get a good price for it.

41726. Does grass land in England fetch as good a price as grass land in Roscommon?—Some of it, but I do not think the most of the grass land I have seen there is good. We have a very moist climate, which makes the grass good.

41727. They have the advantage of proximity to market, and we have the advantage of climate?—Yes.

41728. My information is that you can get very good land in Yorkshire for ten shillings an acre?—I do not know anything about that, but I have seen very bad land in Hampshire let at eighteen shillings an acre which the Land Commission would value at five shillings an acre in Ireland.

Most Rev. Dr. O'Donnell.—My opinion is altogether subject to the correction of our Chairman, who has first-hand information on that point.

June 11, 1907.

The O'Conor Don.

41730. Sir ANTONY MACDONNELL.—What income would you expect from a thousand acres of land if let on the eleven months' system, as compared with what it would bring if let to yearly tenants. Would the rent be higher or lower or the same?—Are you assuming a fine.

41731. No, I am not assuming a fine. There are three classes of tenants—the tenant on the eleven months' system, the future tenant, and the present tenant. How would the future tenant compare with the eleven months' tenant as regards income to the landlord?—I should say more.

41732. More for the eleven months?—Certainly, if you were to put it up for auction you would get more. I may say that in regard to some of the land I sold to the Estates Commissioners I was offered a larger price for it cash down than the Estates Commissioners gave. Of course, I could not sell a piece in that way, but there was land adjoining sold at very much the same price, which has since changed hands. The purchaser has given £1,200 or £1,300 for the interest over and above, and he is liable for the annuities just the same. That shows the market value of the land.

41733. Mr. KAVANAGH.—The eleven months' rent is not a net rent. There are the fences, and so on, to be maintained?—Yes. I would like to say a word about the costs on the bonus and the loss during the interval of sale. The bonus has been alluded to as going entirely to the landlord. But it must be remembered that in sales to the Land Commission the landlord, quite out of the ordinary practice, pays all the costs. In the ordinary sales between two persons out of court it is the purchaser who pays all the costs.

41734. Except in proving title?—In nine cases out of ten you will find there is a clause in the purchase agreement providing that the purchaser will bear all costs or a fixed sum for the vendor's costs. That is the usual thing, but in the case of sales to the Land Commission it is different, but then the landlord has the bonus. What I say is that the bonus is a liberal allowance for costs and loss during sale; that is the way I treat it. I know people who have said that is absurd, as the costs could not come to anything like that, and I think Sir Antony MacDonnell thinks it is a great deal too much.

41735. Sir ANTONY MACDONNELL.—I put it at five per cent.. Well, I put it at ten per cent., and I may say I have sold two properties during the last few years—one to the Estates Commissioners under Section 6, and one to the tenants. I have made out a calculation of the costs and loss during sale, and in the smaller case they came to a little over twelve per cent.

41736. Mr. KAVANAGH.—Do you include in that compensation for the agent?—In this particular case there was no compensation to the agent. He was paid a very small sum. I do not like to give the actual figures, and have them appear in the Blue Book, but I can hand them in for the information of the Commission.

41737. Mr. SUTHERLAND.—Is it not an extraordinary thing that in the transference of property £12 must be paid out of every £100 for clerical work and such like?—No; I say the landlord when selling has to pay certain sums. He won't get his sale through if he does not. He must give the bailiff something. If he does not the bailiff won't be very favourable when going round with the Land Commission inspector.

41738. Isn't that brokerage in the ordinary sense that is paid in similar cases?—I think so; I am not justifying it, but I say it is a necessity. There are others who must be provided for. There is the solicitor, and that will mean from 1½ to 2 per cent.

41739. CHAIRMAN.—That is a fixed charge?—No; it is whatever bargain you make.

41740. I thought under recent sales it was fixed at 1½ per cent.?—It is working out now at 1½.

41741. Is it not 1½ for the solicitor and 3½ for the agent?—I would not give the agent so much. In my particular case the agent only got 1½, and although doing it on the cheap, so to speak, the costs have run up to the figures I have stated. Then there are surveyor's fees. Another item of costs which I have not heard mentioned yet, and which on many estates is very large and on almost every estate is a fair amount, is the costs of various people having charges against the estate. That is never included in the 1½. There is the head rent, which has to be cleared. I am at present dealing with a head rent, the capital sum of which is £450, and I would be perfectly willing to hand over a cheque for £50 for the costs of that. There are all these charges, and it is not merely the landlord's own charges, but of everyone having a claim on the estate. All these have to be paid. I am not saying whether it is right or wrong, but there they are, and the owner has to provide for them. I have worked out the figures in the two particular cases coming under my own knowledge—one a sale direct and the other under Section 6. In one case they came to a little over 12, and in the other it is practically 11 per cent.

41742. Sir ANTONY MACDONNELL.—Will you let me have a copy of your calculations?—Certainly; I have not the least objection, but I do not wish all the particulars to appear in the blue book.

41743. And can I have them tested by the Estates Commissioners?—Certainly.

41744. I do not mean in the slightest to cast any doubts on their authenticity, but merely to have them tested as regards their practice?—Certainly. I am quite willing to show the books if desired. I have put down everything here in round figures, and I have checked them over. There is only one slight mistake in regard to the bailiff, and that reduces it to twelve instead of thirteen. But I wish to be quite candid; the biggest item is the loss of rent during the interval, and the way I have calculated it in the larger case is, I have taken the average receipts for the five years prior to the sale, and the receipts during the two and a half years the sale was going through.

41745. Most Rev. Dr. O'DONNELL.—And while you were receiving the 3½ per cent?—Or was supposed to be receiving it I have worked that out

41746. CHAIRMAN.—What do you mean by supposed to receive it. Do you mean you did not actually receive it?—No.

41747. Would the arrears be added on to the purchase money?—I am afraid not.

41748. Do you mean to say that you are entitled to receive 3½ per cent., but you did not actually get it?—Yes. That is the usual course. You never get the 3½ on a sale under section 6. The practice adopted is, you negotiate with the tenants under section 6, and see the price they will give. Then you get them to sign undertakings to purchase from the Estates Commissioners at this price, or probably interview the Estates Commissioners, and get their view as to whether they will sanction it, and they may do so only provisionally. Then you have to go round the tenants, and get all the agreements signed, which takes time.

41749. And won't the 3½ per cent. run from the time they sign the agreement to purchase up to the time the property is actually vested in them?—Well, no; it is up to the date of the contract with the Estates Commissioners. I am not blaming the Estates Commissioners for this.

41750. Sir ANTONY MACDONNELL.—It is entirely in your own interest you are doing it. You have gone to the tenants and got them to sign agreements under section 6. You are under no obligation to do anything of the sort. You might have gone to the Estates Commissioners and said, will you give me £5,000 on my property, and they might have agreed, or offered £4,500, but your arrangement was for the purpose, and I do not suggest it was improper, of raising the money to the higher price which you thought you would not have a chance of getting from the Estates Commissioners?—No; I would not agree with you there. What happened in one particular case was, my father got the tenants to purchase one-third of the property direct. They said we will buy from you provided you can get undertakings signed; in fact they insisted on undertakings being signed in nearly every case, and, I think, rightly, because they say, under the section, unless you are able to do so there is a loss.

41751. You do for them in anticipation what they do themselves?—In practice it is necessary to do it, because you will be put off with one thing and another if you don't do it.

41752. One of the objects was the idea that prevailed among landlords, that agreements made under these circumstances would be agreements within the zones, and the idea was to bring the operation of the

system to bear on the operations under section
d now it has been shown that the zone system
applied to section 6, and we never understood it
I can assure you, in my case at any rate,
was no such reason.

53. I did not insinuate anything of the sort?—
they were mostly non-judicial tenants.

54. I do not say but that you are perfectly right
ing it, but the object of it is to get higher prices,
nall blame to you?—No; I think you are under a
prehension, because I think you will find that the
tactics of the Commissioners is to say you must
these things quite apart from whether the land-
wants them or not. They create a difficulty if
don't, and, rightly or wrongly, you have to do

55. Most Rev. Dr. O'DONNELL.—You said the 3½
ent. is not paid?—I will tell you the process, if I
because some of the Commissioners may not be
of the practice in selling property. You get
agreements signed by the tenants, and lodge
application, and so on. During the interval of
the tenant is supposed to pay you 3½ per cent.,
in many cases, he does not. You have no way of
elling him to pay, and you are bound to
a loss.

56. Sir ANTONY MACDONNELL.—But that is rent,
you could add it on to the purchase price; you
add on any number of years' rent?—Excuse me,
nce these agreements are signed, you cannot add
penny.

57. But that is not under section 6?—I may say
was a half-year's rent due in my case, on the 1st
ay, last year, and we applied to the Estates Com-
oners for leave to add that to the purchase money,
as the tenants were anxious that this should be done
would expect that it would be done, but leave was
ed, and we had to collect the arrears, but I may
the Estates Commissioners gave us every facility
collecting them.

58. Have you added on anything on account of
ars previously?—No.

59. Most Rev. Dr. O'DONNELL.—Why should
be any special default in this 3½ per cent.?—
not know if you are aware of the fact that Irish
nts do not pay on the day the money is due. They
pay the full rent within a year, but they do not
on the day the money is due, and then you have
hammer coming down on a particular day, and
ything is gone that is not collected on that day.
cannot collect a penny afterwards.

60. Might you not have an arrangement with the
nts by which they would pay the 3½ per cent. be-
the hammer comes down?—If they did. But it
not pay you to wait. You prefer to lose the money
er than waiting, because it is a case of waiting
finitely. Then, again, there is another point.
on the 1st of May, the 3½ per cent. is due; the
nts in the West of Ireland generally pay in Nov-
er only, and it is very difficult to get them to pay
he 1st of May, but if the hammer comes down on
first of November you must necessarily lose all
een the 1st of May and the 1st of November. You
never get your sale to work out so that the agree-
t will come on the gale day. The hammer will
come down on the gale day, nor will the money
aid up to the gale day.

61. Sir ANTONY MACDONNELL.—Can you not
on the hanging gale to the purchase price?—That
ld be equal to increasing the years' purchase. Sup-
I said I will sell at twenty-one and add on a
's rent——

62. You make your bargain with the tenants
a certain price, and you are entitled to add on
many years' rent as are recoverable. At first it was
ght that you could only add on one year, but
you can add as much arrears as are recoverable.
pursuance of that rule, you can add on the hang-
gale. It is loss of income, and I am only dealing
the fact. During the five years previous to the
I got some hundreds from the property, and
le the sale was going through I got so much less
nts. I put that difference down as a loss.

63. Sir FRANCIS MOWATT.—It would be a tem-
ary loss?—No, a permanent loss, because you never
ver it.

64. But can't you recover it if you can add it to
hanging gale?—No. Sir Antony admits that the broken period is not added, and I must join issue that you can add anything. You make your bargain at the start, and I do not see how you can add on to it afterwards.

65. Sir ANTONY MACDONNELL.—But you could if you could foresee that?—But that is only saying to the tenants you must give twenty-one, and add another year, which will be twenty-two. When you are making the bargain the tenant will say I will give you twenty-one and no more.

66. I would not consider it desirable to add to the number of years' purchase, but is it not possible to make an arrangement by which the 3½ per cent. would be paid?—I do not think it would work out in practice. Theoretically it might be done, and, in some cases, is done, but when you have the hammer coming down it would not work. I am not blaming the Commissioners for letting it drop on any particular day, because in my case they did everything they could to help us.

67. Most Rev. Dr. O'DONNELL.—We have had Mr. Doran's evidence on an extensive scale, and I have no recollection that he put before us any such loss as you describe?—Because you must remember that they will pay the Congested Districts Board where they will not pay us. You can never get them to come in on the day. And then there is the broken period, and by no possibility, if it accrues, can you get it.

68. But no landlord expects it?—I am not saying he expects it, but it is part of the loss on the sale, and I have taken it into account. I have taken the income prior and subsequent to the sale, and you will find the loss is so much, and you will find your bonus is gone. I think these are rather high, because the sale went on so long, but if the sale went on for five years you would find it even worse.

69. CHAIRMAN.—I have heard of a good many cases in Ireland where the 3½ per cent. has been paid, and very regularly paid?—Yes.

70. Why is it paid more regularly in case of direct sale?—Because the Estates Commissioners collect it. It is collected after the sale has gone through, and they have powers to demand and collect it. But the tenants know it cannot be collected in the case of indirect sale once the sale is sanctioned, and we had an instance of that some years ago under the late Land Act. The tenants agreed to pay certain arrears, but once they signed their agreement they snapped their fingers at us and said—"You can't get them." The agent foolishly got the agreement signed before the arrears were paid.

71. And then you have to modify your statement as far as the bonus is concerned to this extent, that if in your opinion it is a liberal allowance against the costs of sale under Section 6, in cases of direct sale, where the 3½ per cent. is paid, and where therefore the loss is not so great, it would obviously be much more liberal?—Well, as a matter of fact, as I said, I have got two cases here. In the last two years I have sold under both systems. Of course, the first case is much the smaller one, and the costs are proportionately higher, but there the bonus did not cover the loss.

72. One case is under Section 6 and the other direct. Why is it that the cost is so great in the case of direct sale?—Because in the case of direct sale the tenants say—"We won't buy at all if we have to pay any rent at all," and they consented only to those terms.

73. But I think you said that in case of direct sale to tenants the Estates Commissioners collect the rent due?—We should lose the rent then due. They would not agree to anything being added. I tried to get it added, but they would not agree.

74. The rent then due was the hanging gale?—I am not putting down anything for arrears of rent, but I am simply taking the actual averages.

75. What do you mean exactly by "the rent then due"?—In November there was a year's rent due. They come in, and they only pay once a year. The actual net receipts from the property I spoke of yesterday during the previous ten years amounted to £175 clear per annum. I find by a memorandum that I made at the time—I had not got it while I was in London, but in this I give the actual net receipts from the property and they work out at £175 a year clear.

June 11, 1907.

The O'Conor Don.

41776. Sir ANTONY MACDONNELL.—Was it within the zones?—Yes. That is on a rental of £400, or practically £375, with charges amounting to £200. That was about £400 a year, and they said—"We won't pay this." Of course, I had to pay head rent just the same.

41777. CHAIRMAN.—There was a year's rent due which they declined to pay?—Yes.

41778. Was not that equivalent to merely buying the thing one year's purchase less?—In a sense it was, but I wanted to add it to the purchase money, and they would not agree. When you say "the landlord gets so much" you must take off these sundry things that he has to give up.

41779. But you probably got a year's purchase more?—No; we could not add anything.

41780. But suppose you agreed to sell at twenty-two years' purchase or any figure—at twenty-two years' purchase, say—on the condition that the year's rent due was not paid, is not that exactly the same thing to you as if they had bought at twenty-one years' purchase and paid the year's rent, too?—Yes, exactly; but when you say I got twenty-two years' purchase for it you must deduct the bonus. I say I got the twenty-two years' purchase, but the bonus went in all the costs and expenses.

41781. You say you do not get the twenty-two because of the remission of the year's rent?—Yes. I say it is exactly the same as saying I got twenty-one and the bonus or saying I got twenty-two without the bonus.*

41782. Not on the rental?—But I mean without the bonus. I say it cancels the bonus or a portion of the bonus. I take it out of the bonus. Your lordship takes it out of the purchase. They do not pay in cash, and I say in some cases you have a year's rent not paid, and in other cases you have part of a year's rent, and in all cases you have a broken period unpaid, and the landlord loses that broken period absolutely, and there is nothing provided for that.

41783. The difficulty, to my mind, is this—You are trying to arrive at what you call the average cost of sale, and you put down amongst your costs of sale one year's rent due, do you not?—Yes.

41784. And it appears there as a lost sum, but if you had sold at twenty-one years instead of twenty-two that sum would never appear in your costs of sale at all?—No; but I say that if you had been able to sell—it is impracticable, but if you had been able to sell at twenty-one or twenty, and said to the tenant, "You pay the costs of sale," you would have had no costs of sale to pay.

41785. Sir FRANCIS MOWATT.—I think that Lord Dudley's point, at all events the point I wish to make—is that all these things are part of the sale price of the estate?—I admit that, and do not wish to say anything about that; but when you say, "The landlord has got such a high price"—and it has been said time after time—and he gets the bonus in addition, I say you must make allowance for all this loss of income in the interval and for the costs. Of course, this year's rent is only one item. I say that in a sale under the 6th Section you are forced into other losses of income, and you lose a portion of it anyhow for the broken period. And then I may say, even where the Land Commissioners are bound to pay you interest themselves, and they are responsible whether it is paid or not by the tenants, they do not pay very punctually. I may say that I have got some due since last December. It has not been paid. It is only a small matter, but I was only paid the November instalment a few weeks ago. They do not pay that very quickly, and, of course, if people were in difficulties it might be a matter of importance to be paid quickly. I have not put that into this paper at all; but there are these two items which I wish to point out, which are really in my mind part of the loss consequent on the sale. It is not fair to say, "You have got such a high price," without saying, "You have to deduct from that these costs." You may say if you like, "You have got a low price and a bonus," but do not say, "You have got the full price and the bonus."

41786. Mr. SUTHERLAND.—And this applies equally whether you sell to the Estates Commissioners or to the Congested Districts Board?—It will not apply to a sale to the Congested Districts Board, because they buy *en bloc*, and they give you cash down. I mean there is no delay. It is the delay which causes all particular item. And the Congested Districts Board generally give you something for the arrears.

41787. CHAIRMAN.—Any other point?—Now, as to the causes that prevent owners of both tenanted and untenanted land selling. If the vendor were guaranteed (provided he were not in default) four per cent on his purchase money from a period of six months after lodgment of the originating request or application, there would be hundreds of owners willing to sell who now are afraid of the delay.

41788. Sir ANTONY MACDONNELL.—You can make an agreement with your tenants at four per cent. if they please and if you please?—I am not aware of anybody having done it with small tenants.

41789. I have known instances where four per cent was agreed upon?—As a rule it is impracticable in the case of small tenancies.

41790. At all events, the Act does not make 3½ per cent. compulsory?—No, but during the period that you are taking this 3½ per cent., or getting whatever you do get, you are paying the charges on the property in full, and your gross income has been reduced. It is not the case merely that after the sale is through you get perhaps a smaller income, but very often an encumbered owner will perhaps get nothing out of the property during the two or three years the sale is going on. I heard a day or two ago a man say—"I am starving, and the whole of the money is going to pay off mortgages and charges and so on."

41791. Mr. KAVANAGH.—Your point is that the delay is the chief reason for landlords not selling more quickly?—I think the delay has an enormous amount to say to it. It is the chief reason. If it was a quick business transaction hundreds of them would take to it.

41792. Most Rev. Dr. O'DONNELL.—I thought you said it was immaterial to an owner whether he got twenty-two years' purchase without the bonus or twenty-one with the bonus.† I think it must have been something else than the bonus that you were alluding to?—Somebody corrected me there. I was not quite correct. Twenty-one years' purchase and the portion of the bonus attributable to the year's rent—a deduction of £200 or £400.

41793. The other would not be correct?—Oh, no; the other would not, because the bonus is bigger. But I say the rest of the bonus goes in costs pure and simple, but one year's rent goes then and is lost.

41794. I wanted to be sure that I understood you—I say the rest absolutely goes in necessary costs that are unavoidable, and the amount I have put down for bailiffs and so on is not more than is justified by the facts. It has been said that the delay is largely caused by the vendors or their solicitors. This is absurd, as it is obvious that vendors and their solicitors would not delay so much more (if at all) in sales to the Commission as compared with sales to ordinary purchasers, and yet in the latter case a month to six weeks is a usual period to insert in the conditions of sale for the proving of title and completion. I can quote instances. I have had a few instances lately of ground rents, and the longest period in any one was six weeks.

41795. Mr. SUTHERLAND.—Was that in England?—No, in Ireland.

41796. And were you dealing with public funds in the public interest?—No, and I say that is all the difference. And I say it is not the solicitors on either side, because in my two cases you had two sets of solicitors, and you could have double delay; but it is a public body, and a public body must necessarily be slower.

41797. You consider that the delay is not in the public interest?—And that it prevents owners from selling.

41798. Sir FRANCIS MOWATT.—Do you mean to say that the investigation of title, as a rule, of landed estates in Ireland is completed in six weeks?—No; I say that in my particular case the contract was completed in six weeks, and they would have been bound to pay me the full interest for any time over. I insisted on this in the contract, and I agreed to pay them fees if I was not regular, but I knew I would be regular. But I would not suggest that it would be possible for the Land Commission to do it in that period, but I think that running it to two or three years is not right.

* See question 41792.

† See question 41781.

799. You said you would quote instances, but you e exceptions?—I quote particular instances that ve had to deal with.

800. Sir ANTONY MACDONNELL.—Let us just take xample of a case in which an owner who has sold property and has to pay charges while he is re- only 3½ per cent. Take the case of a property £1,000, and say that property is sold at nty-two years' purchase. That would be £22,000, per cent. on that would be £715 a year. Now, that property of £1,000 a year unsold, and with s, charges, and everything like that causing ex- e, you would be fortunate if you got £800 a year f your £1,000?—Perhaps you are taking the cost o much. I am referring to the actual cost. I got the actual receipts and everything in the I gave. The rent was £401—I will call it £400 d the net receipts for the previous five years, deducting all expenses of every kind, were £375.

801. Every year?—Every year.

802. Most Rev. Dr. O'DONNELL.—Any agent's on that?—Yes, 5 per cent.

803. Deducted?—Yes, but I may say that there some arrears included.

804. Sir ANTONY MACDONNELL.—But 5 per cent. t's fees on £400?—Yes; that is every year, taking n the average of ten years. But I collected more what was the year's rent, because every year the nts paid some of the arrears. They cleared off of the arrears. I can really show you the rental on like

805. Let us take it at £400. There would be 5 cent. agent's fees on the £400?—Yes.

806. And there would be bailiff's fees also?—Yes, a year.

807. What would be the total expenditure that had to pay out on the management of that es- , bad debts and everything like that—would you it at ten or fifteen per cent.?—Oh, no, because ou include bad debts you must include good debts, ch might counterbalance the arrears.

808. You see the bad debts out of the £400 would r be recovered?—I might say that the bad debts almost *nil*. As a matter of fact, the receipts every year more than the rent.

809. But the Land Conference took ten per cent. e the average cost of management, and that was idered afterwards to be not quite sufficient?

Ir. KAVANAGH.—Mr. Gladstone put it down as 7 cent.

810. Sir ANTONY MACDONNELL.—Let us take it en per cent. That would give you £800 out of 00, and the difference between that and £715 ld be £185, and that would be, you see, the loss uch an estate as that?—Yes.

811. If on the other hand, the expenditure was ter the loss would be less?—And if the expendi- was less the loss would be greater.

812. Well, then, the interest on the charges you 'd have to meet would be, as a rule, four or five cent?—I should think so, on a great many of n.

813. Would the interest on the mortgages be four ive per cent?—Five very often. Four-and-a-half ld be, I should think, the average. You can take hat the whole £185 comes out of your margin. t is the way I look at it, because it is no matter t the items come from, the whole loss comes out your margin, and it is a very heavy loss if your gin is small; and if your margin is big it is not naterial. And then you are calculating your inte- on the whole period, instead of calculating it tly on the broken period. I put the actual figures this case, what the receipts and everything were, the purpose of comparison.

814. Most Rev. Dr. O'DONNELL.—Might not you st the proceeds of that sale at four per cent., if you did you would have an income nearly al to the £375 a year?—No; I think somebody ked out these figures here for me.

815. I worked them out. Twenty-two years' pur- se of £400 is £8,800, and four per cent. on that ld give £352?—The way I have done is this. I e taken the actual cash receipts that I got at the and that is £3,656, or what I, in fact, got out the sale.

816. How much?—£3,656, that is allowing for those losses in the sale, and 3½ per cent. on that gives £128 a year.

41817. I thought you got twenty-two years' purchase on the rental?—Yes.

41818. Very well. Twenty-two years purchase on a rental of £400 gives £8,800. Is not that so?—Yes.

41819. You invested at 4 per cent., that gives £325 a year?—Well, here is the way I have worked it. I have invested at 4 per cent., so that gives £352 a year as against £375.

41820. Yes, but when you take £375 you include some arrears, because otherwise it would not come to so much?—I know. The tenants were gradually paying off their arrears, but I have charged a year's rent here as a loss in full, and I have not added anything more for arrears but deduct the actual figures, in fact, charges, redemption, and costs, which you have not allowed for; and the way I have done it is this: I have put down the £8,800, and the bonus, £1,056. That makes the gross purchase money £9,856.

41821. Yes; that is more than I took it. I did not mind the bonus at all?—Well, then, you have got to deduct redemption price of head rent, £5,000. That is about the figure in fact.

41822. Yes; but how shall we work that out to £375 a year?—My margin was £175 after paying the charges.

41823. You deduct, then, how much?—£5,000.

41824. That leaves £4,856?—£4,856. Then I deduct £1,100 for costs and loss during sale, and these are the actual figures. In this calculation I made a mistake of £100, because I put surveying and some other things down twice. That gives you a balance of £3,756. That, at 3½ per cent. gives you £131 10*s.*, as against £175.

41825. But that £175 would include arrears?—Yes, and you might take £15 off.

41826. That would be £160; and £3,656 at 4 per cent. would give you nearly £150?—Yes. That is far less.

41827. Sir FRANCIS MOWATT.—Now, your father and yourself were resident landlords?—Yes.

41828. In the case of non-resident landlords, absentee landlords, the margin for management of an estate is probably a good deal larger?—No.

41829. Naturally money is spent on labourers' wages, and so on, and the rent is paid more easily in the case of a resident landlord, and you would not put that forward as offering any example of the margin between the net and nominal income of an absentee estate?—As a matter of fact I may say that one of these estates is an absentee estate, in the sense that it is a good way from our place, and there is no real connection with the other, and the other has a residence, and the net receipts are very much larger in the case of the absentee estate. It is the other way about to what you are putting to me.

41830. And would you say that the absentee estate is more easily managed?—Yes.

41831. And the rents paid more readily?—Yes. Where the landlord is on the spot, if he is a good-natured man, like my father was, and the tenants can pay any time, the rents are not paid at all as regularly as they would be in the other place, where there is nobody to come to, and it is the same as the Land Commission. And your lordship will recognise that.

41832. Most Rev. Dr. O'DONNELL.—Is not it almost unexampled that you should have, year by year, £375 out of £400?—It is high.

41833. And that was the case of a resident landlord?—No, because, as a matter of fact, it happened that so long as my father was resident there he did not get anything like that; but in 1896 he transferred it to me, and I was an absentee in London during that period, and I think that was the reason the rents were paid so well.

41834. Did you not consider your father as resident there?—No, because he said he would not interfere, and that he would have nothing to say to it.

41835. CHAIRMAN.—Perhaps we might go on now?—Well, as to compulsion, that is quite unnecessary, as any quantity of grass lands can be bought without it if a fair price be given, and, above all, delay in completion be avoided. Some of the witnesses, when dealing with the question of price, say that the graziers are in a bad way, and are gradually getting into difficulties. If this is so it is obviously the better course to wait, so as to get the land cheaper. Mr. Dolan

June 11, 1907.

The O'Conor Don.

argues that if lands are not got now they never can be, as they are being sold, and there are many anxious to buy. This does not look as if grazing was a failing business. If they are being sold too dear the graziers will not be able to make them pay, and they will again come into the market cheap. If they are being sold too low the Congested Districts Board can offer more and buy. He admits an enormous quantity of grazing land is on the market. Again, if compulsion is to be used, and the grazier evicted, it can be done just as well after he has bought as now. The demands for powers of compulsory purchase has arisen because landlords regard many of the prices hitherto offered as inadequate and unfair. If fair prices were given there would be no grounds for proposing compulsion. My idea of a fair price would be as follows, and I believe that, on such terms, all land required could be obtained without compulsion:—The annual value of the required untenanted land should, unless the owner elects to prove the contrary, be taken to be one and a third times the Poor Law valuation, *i.e.*, the normal standard for income tax. The double interest of owner and occupier would thus be provided for. But as in many cases, the Poor Law valuation is largely under the net annual income, the owner should have the option of proving, by means of his books or otherwise, on sworn evidence, before a judicial tribunal, the actual net receipts, and where he exercised this option the net receipts so proved should be treated as the annual value. The vendor should then get such capital sum as would yield him as income the net value thus ascertained.

41836. Sir ANTONY MACDONNELL.—One question I wish to ask. You say you take the annual value to be one and a third times the Poor Law valuation?—Yes.

41837. The Poor Law valuation being 6 per cent. higher than the first term rents?—Second term.

41838. In Roscommon the Poor Law valuation is 6 per cent. higher than the first term rents, and the Poor Law valuation, therefore, would be considerably higher than the second term rents?—But you must remember that it is very difficult to get at what is the fair rent of grass lands.

41839. I am pointing out to you what the position would be. If you say that the basis for calculation of what the price would be ought to be the Poor Law valuation plus one-third, you therefore take a very much higher basis for your calculation than second term rents, second term rents being the basis of calculation in the fixation of prices under the Land Purchase Act.

41840. CHAIRMAN.—The whole difference is that second term rents represent the landlord's interest, and not the occupier's interest?—Of course, the Poor Law valuation I put down as representing the landlord, and the third as the occupier.

41841. Sir ANTONY MACDONNELL.—Was that the way you did it?—That is the way the income-tax people do it.

41842. But you do know of an estate on which the grass lands were sold on the basis of 15 per cent. under the Poor Law valuation, offering a fair basis upon which to work?—No; I do not.

41843. You referred to it just now in your own case?—As offering a fair basis?

41844. Upon which to calculate the number of years' purchase?—I admit I know of a case where that was done, but there was very great objection raised to the price being sufficient.

41845. But it was done voluntarily?—It would not have been sold if it had not been for the tenanted land.

41846. But I want to point out that you are laying down for the purchase of grass lands a basis which is entirely different from that of the Land Purchase Act, second term rents being taken as the basis of land purchase?—Of course, you have no second term rents in the grass lands.

41847. You must endeavour to get at something in the case of the grass lands that would be equivalent to second term rents?—And I would say one and a third on Mr. Doran's figures would be very low.

41848. What is the other alternative you take—one and a third, or what?—What I say is that in a large quantity of those cases you have got your value fixed.

41849. Most Rev. Dr. O'DONNELL.—You say the State puts the occupier's interest at one-third of the owner's in taxing you?—Yes.

41850. Is not the owner's interest, for sale purposes, represented by the second term rents?—No.

41851. Would not it be a good plan to find the average of second term rents on similar lands in the county and add a third in order to ascertain the owner's interest?—Well, you see it is an almost impossible thing, because you may have two holdings next to each other, one with a second term rent, and the other with a first term rent, and one as low as the other. I might say the same with regard to our own estate. There were very few second term rents on it, and there was great difficulty in some of those cases for the second term rents were not any lower than the first. Some of the tenants went in and got no reduction at all.

41852. The valuation apparently in one county is over the first term rents?—But in Roscommon the figures that Sir Antony has quoted from are chiefly based on a very poor class of land, because in Roscommon there are no second term rents at all on the very good land, and the figures would not work out at all on the grass lands.

41853. Sir ANTONY MACDONNELL.—But at all events we come to this certain basis, that you, yourself, and your late father, have sold grass lands chiefly on the basis of the Poor Law valuation, taking the Poor Law valuation and then applying a certain number of years' purchase, which, in your own case, was twenty-four years?—Yes. You may be aware that my father said that he did not for a moment think of taking such a figure, but you see when you have gone so far as that you cannot go back. It was a quasi compulsion.

41854. I venture to say that that would be challenged?—But at all events that is the fact.

41855. CHAIRMAN.—Just tell me, as you are now speaking of your case, is not it the fact that the Estates Commissioners refused to declare your father's tenanted land an estate unless he threw in the grass land with it?—They refused to declare Clonalis the property, and he said, "I am willing to give the Belanagare grass land with Belanagare estate, which adjoins it, or give a large quantity of it, for the adjoining tenants, whenever an arrangement is come to for the sale of the estate, and I will undertake that, whenever I do come to an arrangement with the Belanagare tenants." And the Estates Commissioners said, "No. We won't let the Clonalis estate" (the tenants were most anxious to buy on Clonalis) "go through unless you give the grass land of Belanagare with Clonalis." My father said, "I will be in difficulty when the Belanagare estate comes to be sold," and eventually it was decided to sell them as one estate.

41856. But the Estates Commissioners declined to declare the Clonalis estate an estate for the purpose of sale under the Act of 1903 unless the Belanagare grass lands was put in with it?—Quite so; and the Belanagare land is twelve miles away, and my father said. "It is no use, because they won't go there."

41857. So that I understand from you that in your father's opinion the price of the grass land of Belanagare was very much affected by the fact that it was only by selling that that it was possible for him to get the Clonalis tenanted estate declared an estate to be sold?—Yes; and I may say that if he had been offered the price that it was eventually arranged to be sold for, and if he had known that he could not have got more than that, I have no doubt that he would not have sold it; but when you have been two years at a thing you will go through.

41858. Sir ANTONY MACDONNELL.—What I was going to bring out is this, that landlords—you, yourself, as I said, and there are, no doubt, many others—have sold grass lands in Roscommon on the basis of the Poor Law valuation, applying to it a certain number of years' purchase (I think it was twenty-five years' purchase), and that you have sold your demesne on those terms, and bought them back?—I dare say, yes. The demesne was bought back at a higher price.

41859. I do not single you out, because I know it has been the case with others. The Congested Districts Board bought lands on that basis, taking the Poor Law valuation, and applying a certain number of years' purchase, what they could get the landlords to agree to. In some instances we bought at twenty-seven years' purchase, and in some at thirty. We think, my lord, we have gone, in some cases, higher.

Most Rev. Dr. O'Donnell.—Quite so.

41860. Sir Antony MacDonnell.—But the basis taken was the Poor Law valuation, and there was no idea of adding on a third, and if you do add on a third I think you will have to reduce the multiple?—I thought the Bishop told us that the Congested Districts Board in practice added something for the occupation interest.

Most Rev. Dr. O'Donnell.—That is so, but that is independent of the valuation.

41861. Sir Antony MacDonnell.—We took the valuation as the prime basis, and then we applied to that a number of years' purchase, which we were in the habit of giving for tenanted land; and then we considered the landlord to be entitled to something else, because in him were concentrated the two interests. That is the difference between the system of valuation at present of the Congested Districts Board and the Estates Commissioners as far as I have been able to understand, but I have never been able to trace it fully out. The Estates Commissioners go into the market and say, "We will give you a price"?—Take the Congested Districts Board's practice and it is exactly what I am suggesting, only the multiple may be possibly different. I say so many years' purchase of the Poor Law valuation for the landlord's interst, and a third for the occupation interest. The multiple may be different, but the practice is really the same.

41862. Most Rev. Dr. O'Donnell.—The procedure that the Congested Districts Board followed is what Sir Antony has outlined for you. The Board was in the habit of giving more money for land on which no tenant resided than for land in the occupation of a tenant. The Board looked upon itself as in the one case acquiring a dual interest, and gave more for such land. Mr. Doran fixed the fair annual value, and the Board said how many years' purchase the Board would give of that annual value. Sir Antony is perfectly right in saying that the Government valuation was not the basis on which we proceeded in those transactions?—I thought it was so valued, and I was just trying to raise that question.

41863. What he said to you was that the Congested Districts Board did not add a third to the Government valuation in fixing a basis for the number of years' purchase offered by the Board?—No; but I mean that the Congested Districts Board, if I understand the matter rightly, went on Mr. Doran's valuation, and not on the Poor Law valuation.

Most Rev. Dr. O'Donnell.—That is right.

41864. Sir Antony MacDonnell.—But the Poor Law valuation is always a factor in Mr. Doran's figures.

Most Rev. Dr. O'Donnell.—Certainly?—But in those figures twenty-seven years' purchase is mentioned. That, I understand, is twenty-seven years' purchase of Mr. Doran's valuation.

41866. Sir Antony MacDonnell.—Of whatever valuation we accepted as being the proper basis?—It is not necessarily the Poor Law valuation.

41867. For instance, in Roscommon the Poor Law valuation would be a nearer approach to the rental of untenanted land than elsewhere, because in other places it would be much less, but in Roscommon the Poor Law valuation is higher than the first term rents, and in many other counties it is much less?—But I do not think it is perfectly fair, because it is a totally different class of land, first term land in Roscommon, and altogether a poor class. There are no rents fixed on the grass lands, so that you cannot draw any conclusion from that.

41868. Most Rev. Dr. O'Donnell.—On the return presented to this Commission by the Congested Districts Board the price paid for untenanted land is measured in the number of years' purchase of the Government valuation, but that is by special request of this Commission?—Yes, certainly, and consequently when Sir Antony says that there is twenty-seven years' purchase of the valuation that does not mean twenty-seven years 'purchase of the poor law valuation. It is of Mr. Doran's or whatever gentleman you employ; and what the proportion to the poor law valuation is I do not know.

41869. Sir Antony MacDonnell.—Well, the only conclusion I come to is to challenge the necessity of adding a third to the poor law valuation?—Well, you add on something to the valuation, and I put it as a third. You add three or four years' purchase. The objection to taking in all cases the net receipts is that where a man farms his own lands it is often impossible to ascertain exactly what are the net receipts. The lands required may be farmed jointly with other lands, and it may be impossible to allocate the profits. Again, a great many resident owners, largely for the purpose of giving employment, employ more labour than is necessary, and thereby reduce the profits. It would be unfair to penalise them. This has been done on the Clonalis estate for many years, and the farming profits on it are consequently small, but the labour bill comes to over £1,000 a year. Mr. Doran's evidence, moreover, shows conclusively that the true value of the grass lands is largely in excess of the *prima facie* standard which I suggest above, and consequently the owner should have the option of proving the actual profits where he is able to do so. The standard above suggested for arriving at the fair price of untenanted lands would do away with the great uncertainty that now prevails when the price is left to be fixed by valuers who differ enormously in their views. The uncertainty of the results of such valuations could not be better illustrated than by the correspondence which has appeared in the *Times* for many months past as to the extraordinary discrepancies in the valuations of even the most eminent professional valuers in England. Of course, it was last year when this note was written, and there was for some six months a correspondence in the *Times* showing that professional valuers were valuing in the most extraordinary way, one putting on one value and another another. Before concluding I would like to say one word about landlords of the West. It has been alleged that they did nothing for their tenants. I repudiate this. On the Clonalis estate for many years past more than the whole rental of the estate has been spent annually in labour there. In 1880 or thereabouts my father spent over £4,000 in relief of distress works on the property, chiefly on tenants' holdings. When seed potatoes were necessary he has often given them out free to his tenants under £5 valuation, and I have done so this year. He constantly gave his tenants timber, etc., for their houses, building bridges, etc., and although I have sold the property I am continuing this practice. Another practice that greatly assisted the tenants was to allow them to pay the rent by feeding one or more head of young cattle. Although I have sold the property I had a number of applications for cattle in order to pay the Land Commission rent. I sent out cattle to the poorest, although it is not a very paying way of feeding them.

41870. Most Rev. Dr. O'Donnell.—Perhaps you did that as an Irish chief rather than as a landlord?—Well, it has been the practice on the property, and all I say is that you must not abuse us too much for the way we treat our tenants. The Estate Commissioners have taken over the property, and so far as I can see, they have not done anything to help the tenants on the Clonalis estate, except giving holdings to two or three of them, and the tenants are fully expecting a few thousand pounds to be spent, but I do not know whether they will be disappointed. I believe there are many landlords who have assisted their tenants in similar ways. To summarise the whole situation, I say give the Congested Districts Board ample funds and full powers of regulating holdings and carrying out drainage works, a proper staff, and ensure quick payments of purchase-money to vendors, and they will be able to do a very great deal towards ameliorating the lot of the poor in the West of Ireland. Just before I leave I might mention one point that Mr. Fitzgibbon alluded to. There are three estates adjoining mine, and they have been sold under the three systems; the Sandford estate, the Dillon estate, the De Freyne estate, and my Clonalis estate. Mine has been sold under Section 6, the Sandford estate under direct sale, and the De Freyne and Dillon estates to the Congested Districts Board. And I may say that of these three different ways, the tenants are well pleased with that of the Congested Districts Board.

41871. Sir Antony MacDonnell.—Because their holdings have been improved?—Yes.

41872. And the Estates Commissioners have no money to improve the holdings, because it was not bought as a congested estate?—No. So far as that

June 11, 1907.

The O'Conor Don.

goes, the landlord would raise no objection whatever.

41873. Yours is less congested than the Dillon or De Freyne estates?—It is not congested within the meaning of the Act, and that is one of the points I raised at the beginning, because although there is very great congestion on two or three townlands, taking it as a whole, it is not congested.

41874. CHAIRMAN.—Tell me, in the case of a property like yours, where your estate is sold to the Estates Commissioners under Section 6, and therefore, as Sir Antony has pointed out, cannot be improved, but must be merely re-sold by the Estates Commissioners to the tenants, what is the difference really in practice between that and direct sale?—I think there is very little, except that there is a possibility of migrating the tenants; and with respect to the Clonalis estate, we were delayed a year and a half over the sale of the Clonalis estate in order to provide facilities for that.

41875. You say there is very little difference except that there is an opportunity of migrating?—Yes.

41876. How does the opportunity of migrating come in?—Because they buy grass lands in order to transplant tenants from the tenanted part to the grass lands.

41877. But they can only do it if they can get back from the tenants the actual sum of money which they gave to the landlord, is not that so?—They can spend money in fencing and building; they can do something in that way.

41878. Sir ANTONY MACDONNELL.—For new tenants?—Yes.

41879. Only to the extent of 10 per cent.?—Yes. But I may say that there is some way of doing it.

41880. Most Rev. Dr. O'DONNELL.—Out of a reserve fund?—There is some way even where there is direct sale, because they spent £2,000 on the Sandford estate, and they have spent nothing so far on ours.

41881. CHAIRMAN.—On what have they spent £20,000 on the Sandford estate?—On draining bog.

41882. But they have not actually altered the tenancies?—No. They have removed a few of our tenants, but I cannot say they have removed them from the really congested part.

41883. Mr. SUTHERLAND.—This other estate on which they spent the £2,000 must have been scheduled?—No. But the Clonalis estate is in a scheduled area, and Belanagare is not, and as a matter of fact the estate that is not in the scheduled area has had all the holdings enlarged, and the one that is in the scheduled area has not.

41884. Because there was land available in one case?—Because there was land available. But I think something could be done to improve Clonalis, although a good deal has been done already.

41885. Most Rev. Dr. O'DONNELL.—You live pretty near the Dillon estate?—Yes, adjoining it.

41886. What has been your observation of the operations there?—Have they not conduced much to the advantage of the occupiers?—Oh, yes, they have; and there is a good deal of that due to wages. I do not think it can be disputed that there have been very good wages given, and there is a great deal of employment.

41887. And many of the holdings still remain uneconomic. Would there be grass lands pretty near for the enlargement of some of those holdings of the Dillon tenants which are uneconomic?—That depends on what you mean by pretty near. The Dillon estate stretches twenty-five miles. From the end nearest Castlerea, I would say there would be grass lands within ten miles.

41888. I ask you for this reason, that one might contemplate a small occupier surrendering his little property for the enlargement of his neighbour's holding, and therefore intending to move to a better holding. Do you think that that will likely occur on the Dillon estate?—I think it will to some extent, but I think there is much more desire to get an enlarged holding than to move to a new one. You know, in the case of the Clonalis estate before we sold, the tenants came forward and said they must have grass lands, and they would all go, but when it came to the point of going, although the Commissioners did all they possibly could to get some of them to go to Belanagare, they got none except one man who did not practically live there, and he is a schoolmaster, and had a plot of 15*s.* a year.

Mr. W. HARRINGTON examined.

Mr. W. Harrington.

41889. CHAIRMAN.—Since this Commission began to sit we have had a great many remarks made in the course of the evidence with regard to the kelp industry by people who suggested to us, especially in the country, that the kelp industry might be encouraged by grants from the Congested Districts Board. We have been told that prices of kelp vary considerably, being much better some years than others; and we have also heard that during the last few years a process has been invented for obtaining iodine from other things besides seaweed, and that this has very much affected the future of the kelp industry. We are very anxious, therefore, to obtain some evidence from someone like yourself who knows all about it as to how far these things which we have heard are true?—It is very many years since I have been in touch with the kelp industry. I may mention my firm manufactures chemicals. We thought we might do something in the way of recovering iodine from kelp in connection with other matters. With that view I remember going to the West of Kerry and interviewing an enterprising man there, a Mr. M'Donnell or O'Donnell in Castlegregory. He took a keen interest in it. There was kelp to be had there. He went in for it on a pretty large scale.

41890. Sir FRANCIS MOWATT.—Did he go into it experimentally or as a trader?—He collected the seaweed and burned the kelp.

41891. He went into it commercially?—Yes, he thought it might pay, and be a good thing to do for the sake of the people about. He also had the idea not of selling the kelp as kelp, but of extracting the salts from it. Kelp contains potash salts and soda salts. They are of a certain value. The idea we had was that he should get as much of the salts out of the kelp as possible, and send up to our works the concentrated iodine liquor. The iodine is one of the last things that remain in the liquor. The other salts crystallise out. We worked that for a short time. It just paid its way. I think he was handicapped rather inasmuch as he could not always get enough of the weed. It was a limited quantity that came in, and the weather prevented the people from getting it sometimes, and so on. We extracted the iodine partly, and also we sent it in a concentrated form to France. We got a market for it there. I may say it was done through an agent in London. He applied to us for concentrated iodine solution. It was in fact that that gave us first of all the idea of starting this thing. He got it into France without duty by calling it soda lye. He got it in *sub rosa*, that is without paying duty, and it paid him very well. Then Mr. M'Donnell got into bad health, and died soon afterwards, and the thing collapsed. That is my experience of it. The Chairman has mentioned that it was suggested that there was another source for iodine. That has been known for very many years. The principal source of iodine is from Chili saltpetre. Many years ago at the time that I was thinking of going in for this iodine business, I made several inquiries in London and elsewhere, and found that they have immense stocks of iodine and could swamp the market any time they liked, so that it was a dangerous thing I thought for anyone to put works in Ireland for the purpose of extracting not only the iodine from the kelp, but also the salts, the potash and other salts.

41892. Mr. SUTHERLAND.—Would that be equally dangerous?—No. The potash salts are marketable always. Long ago, when kelp started in Ireland, potash was not known in great quantity. Germany had not found such deposits of potash. I should say subsequent to that when they were found they took away from the profits of the kelp industry to a very large extent.

41893. What is the form in which potash is contained in it?—There is 35 to 40 per cent. of chloride

of potash in kelp, and about 10 per cent. of sulphate of potash.

41894. Potassium chloride?—Yes, and of sulphate of potash about 10 per cent., and perhaps 5 or 6 per cent. carbonate of potash.

41895. Apart from the iodine, which I understand is the most valuable part, would these other potash salts pay to manufacture?—That is the point. It means a good deal of trouble to extract them. They are worth about £9 a ton. It depends principally upon what you can get kelp for, and what the extraction costs.

41896. CHAIRMAN.—What was being paid for kelp at the time to which you refer?—I do not remember exactly.

41897. Mr. SUTHERLAND.—Was not it sold early in the last century for as high as £20 a ton?—I daresay it was.

41898. CHAIRMAN.—Does it not now come to £4 a ton sometimes?—If it was good kelp.

41899. During the last two or three years we have heard that kelp has been fetching from £3 to £4 a ton?—I should not be surprised.

41900. If it is found so easy to extract iodine from Chili saltepetre, and if there are these large reserve supplies of iodine in London, why is there a market for kelp at all now?—The amount of iodine they get from all the kelp they receive is such a bagatelle compared with the amount that they have from the other sources that really they don't mind the competition. The price is regulated by the Chilian supply altogether, and the others have to fall in with it. It is not their policy to run it out altogether. They make more by keeping the price steady. The kelp people have to follow them. There is some profit to be made also, no doubt, out of the potash salts that they recover.

41901. In your opinion there would be always a certain market for Irish kelp?—That depends upon whether those who are using it now will always continue to manufacture from it; but there is always the fear that if it became a serious competitor with the Chilian supply they might knock the price down.

41902. Could it become a serious competitor; is not the process so laborious?—It is a matter of quantity; what they get altogether.

41903. Sir FRANCIS MOWATT.—Is the quality of each kind of iodine the same?—Yes, the same iodine. Then iodine is not so valuable now as it was a few years ago. It is about eight shillings a pound now. They have plenty of it there in Chili.

41904. They don't get it out of the nitrates?—Yes; that is the source.

41905. Mr. SUTHERLAND.—Is it as popular in medicine as ever, or has there been any falling off in that respect?—No. It is used quite as much as ever.

41906. Do you know what percentage of iodine a ton of kelp would produce?—It varies very much. It depends altogether on the quality of the kelp. It varies from ·2 to 1·4 per cent. The general run would be from ·4 to ·5; about one-half per cent.

41907. It depends on how it is burned, and so on?—Yes. A lot of it is mixed up with sand. There is a great loss in the way they burn it. Improvements could be made in that way. There would be a great deal more iodine in the kelp if it were properly burned.

41908. One gentleman in Donegal said: "If I might be allowed, there is a little industry I should like to refer to that belongs to the congested districts. It is the kelp industry that exists a good deal around the division which I represent in Donegal. It was a very paying industry for years, and even last year the prices were as high as £3 and £4 a ton. But the people round here represent to me that they often think it is worth more, but that there is no competition for buying. They say the shore is divided into districts, by the buyers, and that one buyer will not buy in another's district. They map it out among them. Those fishermen and others who burn this kelp are saying that this year they have no buyers at all, and that they received no notice from the buyers that they were going to come. Consequently there are between £1,200 and £1,500 worth of kelp lying on the hands of the people for which they can find no market." That is at page 47 of the Appendix to our Second Report*?—I can quite understand that they are completely in the hands of the buyers. I think there is only one firm that works kelp in Scotland.

41909. Any in Ireland?—I don't think that there is any firm in Ireland that works kelp, and extracts the iodine from it.

41910. It is all exported?—Yes. I think Paterson is the name of the firm in Scotland.

41911. Most Rev. Dr. O'DONNELL.—Is it the same firm that controls the supply from South America?—They have nothing whatever to say to that, and have no control over that supply at all.

41912 CHAIRMAN.—Do you mean to say that the only people who buy this kelp are Paterson's buyers?—That is what I think. There is no proper competition in the market for it. That brings the price down very low. The only way to remedy that is to start another works. Who is going to do that.

41913. Suppose the Congested Districts Board were to buy against these buyers, as they did with regard to the herrings and mackerel, in order to keep up the price, is there any way in which they could get rid of the kelp when they bought it?—No way at all. There are very few users of kelp. I don't know of any but the one firm. There may be one or two.

41914. Most Rev. Dr. O'DONNELL.—Taking that another stage, it would be quite intelligible if the Paterson firm controlled the iodine supply from South America that the starting of a factory to make iodine on the Irish coast might lead to the suppression of the kelp industry altogether?—It might, of course.

41915. But if we assume that the Paterson firm merely supply iodine from kelp to the general market, what is there to justify an apprehension that if a factory were started on the Irish coast to make iodine out of kelp, as the Patersons do in Scotland, that those who control the market would intervene and swamp the Irish trade, or to put iodine on the market so cheaply as to make the Irish manufacture an impossibility?—Certainly, I think they have no reason at all for running down the price more than at present. It is all a matter of the amount of iodine recovered. If the industry grew to such an extent that the amount recovered from kelp was three or four times what it is now then it might be a question whether they would lower the price, but as long as no more iodine is made from kelp than at present I don't see why they should take more notice of it than now.

41916. CHAIRMAN.—And there would not be any reason?—I don't think so.

41917. Paterson's make their iodine from kelp collected around these coasts?—Quite so.

41918. They have to put it on the market at a price which is governed by the Chilian supply?—Quite so.

41919. Suppose that a factory were started in Ireland, all that would happen would be that a certain amount of the kelp would be diverted from Paterson's factory to this factory?—Quite so.

41920. The general output of iodine would not be any greater?—No.

41921. Unless you assume that Paterson does not buy to the full extent that he could buy?—That is quite so.

41922. Then, as to the price you could pay to the people who burn it, it is a question of what Paterson's real profit is after he has bought from these people?—It is, of course.

41923. It is a question of whether Paterson could, if he chose, afford to pay those people a better price and yet put his iodine on the market at the same price?—Yes, it is, altogether. He might not be able to give more, but, of course, I need not tell you that when there is only one manufacturer working a raw material like that the tendency is to give as little as possible.

41924. Of course he has got a monopoly?—That stands to reason.

41925. Sir FRANCIS MOWATT.—Has the price of iodine kept up in later days?—Yes, it is about eight shillings a pound now. It was never much above that. I think it might have been nine or ten shillings.

41926. CHAIRMAN.—In your opinion, it would be worth the while of the Congested Districts Board seriously to consider the suggestion that has been made?—The only way they can meet that and cause some competition in price would be to have works started in Ireland, but then that is a big undertaking, possibly.

41927. Sir FRANCIS MOWATT.—Does it involve very expensive machinery and staff?—No; I should not

* See Appendix to Second Report of the Commission [Cd. 3819, 1907], p. 47.

June 11, 1907.

Mr. W. Harrington.

say it would run into a great deal of money; but you would want to go into it very carefully or it might be a failure. That would not be nice. You would want to get a good deal of opinion on the subject.

41928. CHAIRMAN.—What sort of plant does it require?—There is a good deal of evaporation. The kelp, as it comes, is treated with water. All the salts have to be dissolved out of it. These various salts crystallise out Some products crystallise out before others. The very first product to crystallise out is sulphate of potash. Then they go on evaporating, and they get some of the soda salts out. The third crystallisation generally brings the chloride of potash out. The residue then contains more soluble salts, such as iodine salts, sulphate, and other compounds of soda, which are formed in the beginning, sulphate of soda, carbonate of soda, and chloride of soda.

41929. Most Rev. Dr. O'DONNELL.—Are all those different salts marketable?—Not all. Sulphate of soda is worth nothing, but the potash salts are all marketable at £9 a ton.

41930. You have all these by-products besides the iodine?—Yes. There is over 50 per cent. of potash salts in the kelp, fetching about £9 a ton.

41931. In a factory like Paterson's, that deals with kelp, is his main output and his main source of profit the iodine or potash salts?—That I cannot tell you at all.

41932. Most Rev. Dr. O'DONNELL.—He might have his working expenses out of the iodine, and make his profit out of the by-products?—That is quite so.

41933. Sir FRANCIS MOWATT.—Do you recollect what the expenditure of Mr. McDonnell was?—No. I never got any return from him of his expenses, but he told me he got about clear out of it, but he did it in a very experimental way. I need not tell you that anything done in that way will not pay properly. If you want to do a thing in which there is a narrow margin, you must do it on the most economical lines possible.

41934. CHAIRMAN.—He put up a factory himself?—No. He had a sort of outhouse. He did it in an inexpensive way, but it was a ruinous way.

41935. Did he actually procure the seaweed himself?—Yes; he had men employed collecting and burning, and he then extracted these salts himself, and sent up the concentrated liquor containing the iodine and many of the soda salts. He got the potash out of it, and I think he used the potash as manure.

41936. Mr. SUTHERLAND.—Did he do that by burning it openly as we see on the coast?—Yes.

41937. There was no house built?—No. Of course it was wasteful.

41938. Are you aware that in some places there are brick houses with nothing but burning places in them?—Yes.

41939. I saw that in Scotland, I think, done by this same firm, but unfortunately I was not so much interested at that time, and I did not ask, but my information is that they only did the burning, and then the kelp was transferred to the Clyde, where it is finished?—Quite so.

41940. Would that system save anything in Ireland? If there were brick houses with furnaces built would it be a more economical way?—No doubt, it would be better. The present method is a very crude way of burning. It means that a lot of iodine is lost, and I think that they could be instructed so as to burn it to greater advantage. A great deal could be done in that way, and another thing that might be suggested, is that they ought to be paid really according to the percentage of iodine in the kelp, so that those who took the trouble to burn it properly would have an incentive by getting a remuneration for their care. For that reason, I think it would be a good thing if some arrangement could be made by which they should be paid according to the amount of iodine, because, I need not tell you, that much of it is a good deal adulterated with sand. The manufacturer, when giving his price, takes the good with the bad, so that those who are really careful do not get the benefit that they should.

41941. Sir FRANCIS MOWATT.—But the plan that was contemplated was rather that some authority should start a furnace, or whatever you like to call it, buy the kelp at so much a ton from the people, and do the burning themselves, and export the ashes?—Or recover the salts from the kelp, recover everything that is marketable.

41942. Mr. SUTHERLAND.—This firm in Glasgow might buy it in that state?—They would, but there would be no advantage as compared with taking the kelp over, as you would have to pay freight on the sulphate of potash.

41943. CHAIRMAN.—If you started a factory in Ireland for getting in Ireland the salts, and soforth, out of the kelp, would you suggest that they ought to buy the seaweed from the people or the kelp; do you think that the people ought to burn the seaweed?—I would suggest that they should buy the kelp. If I was working a factory, I would give a better price to those who gave kelp with a large percentage of iodine. That is the valuable portion, and I would pay according to that, just as they pay according to the amount of cream in the milk sent to the creameries. If this were done, the people would very soon get into the proper way of burning, and you would get the best results.

41944. Is there such a thing as good burning and bad burning?—Yes; and such a thing as putting a lot of sand into the kelp.

41945. For weight?—Yes.

41946. But you can burn the seaweed in such a bad way as to lose some of the iodine?—No matter how you burn it you lose a certain amount of it, but you lose a great deal more by carelessness, and they might be instructed in that way; but the only way you could have a bit of competition in the price of kelp is by starting works in Ireland; but it is another question whether it would pay or not. That I cannot give you any information about.

41947. CHAIRMAN.—Let me read you one or two questions and answers from the report of our evidence in Donegal, page 93*—"Is there such a thing anywhere as a factory for kelp?—No, there is not, but they manufacture kelp. The chemical works to which the kelp is sent are at Falkirk and Bowling, on the Clyde." I suppose that is Paterson's. Then Mr. Sutherland says:—"You think it would not be impossible to get such a factory as they have at Bowling?—It was once attempted, but all such attempts fail through want of support. It was attempted at Meenacladdy by Benjamin St. John Baptist Joule, of Rothesay, Bute." "The price of kelp fluctuates?—Yes, from £3 to £4 a ton." "It would pay at £4 a ton?—It would pay well at £4 a ton." "What is the current price?—From £3 to £4. About £3 10s. 'Some years it is less. It depends upon the quality." Then:—"But you are of opinion that the industry is capable of development?—Yes. It is a valuable industry." "And that the by-products are valuable for manure?—I am sure they would as a top-dressing." "Have you any locality to propose where this kelp may be gathered?—I would not suggest the locality. I think I would leave that to the people who know the neighbourhood well." Then, at page 98:—"Another considerable industry along this coast is kelp. The prices vary from £4 to £3 a ton. Last year there were 172 tons exported from the port of Bunbeg. This year the price was only £3 a ton." "Have you ever heard it said that kelp could be dispensed with altogether?—I know it could, because they have discovered other ways of getting iodine. What ruined the kelp industry in this place for a number of years was that they burned a number of heavy stones in the centre to make it weigh, and they said they never had such a prosperous year in their lives." "As a matter of fact, the theory is advanced that chemical processes are known, which if put into operation by those who have control of them, could ruin the kelp industry?—Very possibly. I am not prepared to say that." "Mr. Sutherland.—The kelp industry is rather precarious in the present state of chemical science?—Yes, but they get the price for what they produce." "The Chairman.—Is that because manufacturers think that a second string to their bow is desirable?—Very possibly that may be the reason."

41948. Most Rev. Dr. O'DONNELL.—Have you been asked at any time to purchase iodine from kelp made on the north coast?—No.

* See Appendix to the Second Report of the Commission [Cd. 3319, 1907], p. 93.

41949. There was a little factory at the Fahan ation near Buncrana, conducted by the station-aster?—Did he recover the iodine himself?

41950. Yes, and he had some little help from the ngested Districts Board, but the project was on very small scale, and the man who had to attend trains could not do much at an iodine factory; t I don't think he met any loss by it?—Of course s best plan would be to sell the concentrated liquor the maker.

41951. Have you any idea of the size of a factory at would apply a reasonable test to this industry? I have not. That is a matter that would have to gone into. I could not tell you what amount you ould turn over in order to make it pay. Things th a narrow margin like that have to be worked a certain scale. Otherwise you cannot get any fit out of it. The charges on small things are ry often as big as those on large.

41952. Would you contemplate in reference to arting this industry on the Irish coast, that it ould be with a view, in case success was likely, starting several if not many factories along the ast?—The only thing is, would you get at any one int enough kelp to supply many factories. I fear t.

41953. You alluded to the process of burning kelp, d you said that there is a better and a worse ocess?—There is.

41954. Is not it also important to get the May ed for this?—Yes. Some weed has more iodine an others.

41955. With reference to the purity of the kelp elf, did it occur to you that inspection might be stituted to prevent the mixture of stones with the ed?—Of course, I think all that could be regulated paying according to the contents of the kelp. If at were done, the evil would soon remedy itself.

41956. I presume it is difficult to do that?—Yes. is hard to get an even sample.

41957. If the manufactured article is not tested, it ll go to Scotland, and it will be difficult to make rangements to pay upon the value of the article?— s.

41958. Sir Francis Mowatt.—When the kelp is rned, what remains?—All the organic matter goes ay, and the minerals remain. All vegetable tter has a certain amount of mineral contents. ey remain as ash, with a certain amount of this ckness from carbon, and the iodine that is there combined with soda to a certain extent.

41959. Chairman.—The first thing is, that the d burnt in a lump produces a sort of thing like black stone?—Yes. All these salts fuse together.

41960. That is the kelp?—Yes.

41961. Most Rev. Dr. O'Donnell.—Yes, but there two ways of selling it, either as solid or as hes. It may be sold either one way or the other. ey have resorted to selling it as ashes wherever it desirable to prove that there is no admixture what-er.

41962. Sir Francis Mowatt.—That is what I was ning to. If it is turned into the ash form it uld be very easy to run it through a sieve or some-ing to get rid of the stones?—Yes. The stones could detected very easily, but they put sand in, too, d that would also go through the sieve.

41963. Chairman.—What is the difference in the ocess by which in the one case that black lump is oduced and in the other case ashes?—The one is rd burned. The ashes are fused. Greater heat is d and the potash salts fuse together, go together a mass.

41964. When you get that lump it means that ater heat has been used?—Yes.

41965. That is the usual way?—That is the way have always seen the kelp; in lump form.

Chairman.—I have always seen it in that form.

Most Rev. Dr. O'Donnell.—They have introduced e other way on the Donegal coast.

41967. Sir Francis Mowatt.—In that lump do the lts remain?—All the organic matter is burned away the people. It is converted into gas and goes off the atmosphere, and only the mineral matter mains behind. If you burn coal, for example, you ve your ash, the mineral matter, left behind.

41968. Chairman.—How are the salts extracted from that lump?—By water. They heat it in a series of tanks. They dissolve the kelp in this water. The various salts have different degrees of solubility. One salt is more soluble in water than another. Sulphate of potash, for example, is the most insoluble salt in the kelp. When this concentrated liquor has got sufficiently concentrated and is allowed to cool, the most insoluble salt crystallises out first. That is the sulphate of potash. Then they evaporate more, and the next crystallisation brings out the soda salts. The third crystallisation brings out the chloride of potash salts, which are more soluble than either of the other two, and remain the longest in solution. Finally, the iodine salts, the most soluble of all remain in the last liquor. That is the process which is followed. It is really on the way that the evaporation is carried out that the cost of production of these salts depend.

41969. If I can be allowed to sum up, what you have told us amounts to this; in the first place, the great supply of iodine now comes from Chili saltpetre?—Yes.

41970. And that supply is so large compared with what can be derived from Irish kelp, that it is not likely that the people who have control of the iodine derived from Chilian saltpetre will ever think it worth their while absolutely to crush out the supply of iodine derived from Irish kelp?—That is my opinion. I think they are not likely. At one time I thought that they might do it

41971. Therefore it is probable that there will continue to be a sort of market for Irish kelp?—Yes.

41972. But so far as price is concerned that can only be tested by the erection of a factory in Ireland?—The creation of competition can only be effected in that way, by having some other works either here or elsewhere.

41973. And, of course, anybody erecting such a factory would have to face the fact that the price of the finished article must necessarily be governed by factors which they cannot control themselves?—Yes, starting works is a speculation; I think a very great speculation.

41974. Mr. Kavanagh.—We have to look to all these industries for a certain purpose: would you say that there is a future in the kelp industry?—I would say that it ought to be a source of income still, but if they are not taking it in some places at present it is a bad sign. Whether that is to get the price down it is impossible to say. It may be that these people who are manufacturing find that even at £3 it does not pay them.

41975. You are not very hopeful of the future of the demand for iodine?—I am not very hopeful in this way, that there is only one factory. It is completely in their hands. They regulate the price, but I really don't know sufficient about the profit that there may be in the manufacture of the article with prices as they are at present to give an opinion. They may make a very good profit out of it. That is a thing I could not say very much about.

41976. Sir Francis Mowatt.—You are not able to say that purchasing good kelp at £3 a ton affords a fair prospect of making profit?—I am not in a position to say that.

41977 Most Rev. Dr. O'Donnell.—Apparently the only serious risk in starting a factory on the Irish coast from your evidence would be that these gentlemen in Scotland who now take the kelp might be put out of the market?—They might.

41978. The danger is not that those who control the general iodine industry would take any offence at this?—I should think not.

41979. Chairman.—Even if the Scotchman were put out of the market you would not be in a worse position than now.

Most Rev. Dr. O'Donnell.—Only this: you should be prepared in future to take the kelp yourself?—Yes, and you should take it from all parts of Ireland, too, and then the question of transit comes in, and you will find it would be very much cheaper to get kelp over to Glasgow from many parts of Ireland than to another spot in Ireland. That is the general rule you will find. It is cheaper to have it transshipped from all parts of Ireland to Glasgow than it would be to get it from various parts of Ireland to some other part in which you might be working.

June 11, 1907.

Mr W. Harrington.

41980. CHAIRMAN.—If your object is to maintain the price for the burner along the west coast there is no particular reason why the factory must be in Ireland?—There is no reason, but it would be better to have it in Ireland, but the site for it would require to be selected with a view to taking into consideration the question of transit.

41981. If as you say the cost would be so much less to take kelp from various parts of Ireland to places in Scotland rather than to collect it at certain places on the Irish coast, it would be perfectly feasible to have an Irish-controlled factory in Scotland?—Of course it would. In making that statement as to the cheaper transit to Glasgow I was thinking of the fact that the facilities would not be so great around the Irish coast.

41982. Sir FRANCIS MOWATT.—The ultimate product is not at all bulky?—The kelp is not a bulky thing. It is a very heavy thing.

41983. If you could get a really good supply, as w understand there is along the Galway coast, and bur that out, the cost of the transit of what I may ca the ultimate product to Glasgow would be ve small?—That would not matter so much, b I don't suppose that any part of the coast Ireland would produce sufficient kelp to keep a facto going, and if you start works you must keep the going all the year. It would not do to work the spasmodically. It may be that Patersons require the kelp they can get to keep their works going. Th is a point that must be considered. If you ere works you must get a sufficient supply of material keep them going, because spasmodic work won't d

41984. CHAIRMAN.—There might not be enoug material to keep Paterson's works and new Iris works going at the same time?—There might not b

Mr. J. L. PIGOT examined.

Mr. J. L. Pigot.

41985. CHAIRMAN.—I think you are adviser in forestry to the Estates Commissioners?—Informally I am, but my regular position is chief of the mapping and surveying department. I do any technical expert forestry business which happens to come before the Estates Commissioners.

41986. You have had great experience in Ceylon?—I was lent by the Government of India for a year to Ceylon, but I had an experience of twenty years in India and a training of three years in the French National Forestry College. I have been interested in the question of afforestation in Ireland since the 1885 Parliamentary Committee, for which I procured some evidence, and during the last few years, since I joined the Land Commission, I have had opportunities of studying this question as affected by the Land Purchase Acts.

41987. You have been good enough to prepare some notes for us, which perhaps you might go through?—I have prepared these at the request of the Estates Commissioners and not specially for this Commission, but I sent them on to the Commission thinking that there might be points as to which you might wish to question me. The main points are the destruction of timber on tenanted holdings, the acquisition of waste lands for afforestation, the purchase of existing plantations in order to save them from destruction, and the ways and means of carrying out those objects.

41988. Will you develop that?—(*Witness, reading from memorandum**).—The reservation to and the management by the State for purposes of forestry or in general interests of moor, mountain and bog lands, not required for pasturage and agriculture in Ireland, is a necessity if the land is to be economically utilised. Because—(*a.*) There are immense tracts of such land.

41989. Sir FRANCIS MOWATT.—That means moor mountain and bogland?—Yes.

41990. Mr. SUTHERLAND.—Not required for pasturage?—Not required for pasturage.

41991. CHAIRMAN.—Where are these immense tracts?—I will bring that out a little more presently. (*Reading memorandum*).—(*b.*) The best, if not the only use to which much of the "waste" land can be applied is the production of timber, or of minor forest products such as osiers for the fishing industry.

41992. Sir FRANCIS MOWATT.—I have understood that the osiers have practically lost their value altogether now for the fishing industry?—I had it recently on good authority from an official in the Congested Districts Board, though I am not personally qualified to speak on that special point. A few years ago osiers commanded a high price. In evidence given before a previous Parliamentary Commission it was stated that osiers could be most profitably grown. I think in a recent pamphlet issued by the Department of Agriculture they bring out a high profit for osiers, whatever destination they are intended for.

41993. Most Rev. Dr. O'DONNELL.—They are used for baskets in the fishing industry?—There is an enormous number of baskets used in the fishing industry, for lobster pots, fishing baskets, and soforth.

41994. Mr. KAVANAGH.—Are you aware that a great number of acres of osiers have gone out of cultivation because there was no demand for them?—I was not aware of it.

Mr. KAVANAGH.—It is a fact.

41995. Mr. SUTHERLAND.—It is a fact that there a several factories in Scotland where they manufactu those year after year; you are aware of that?—No.

Mr. SUTHERLAND.—They manufacture these osie into the baskets that Mr. Pigot refers to. Thousan and thousands are used in the herring industry.

Sir FRANCIS MOWATT.—I understand that they ha introduced thin wood crates, and that baskets wo pay.

Mr. SUTHERLAND.—There are official baskets stampe to contain a certain capacity.

41996. Most Rev. Dr. O'DONNELL.—For Post Offi purposes, such baskets are used for the parcels pos and soforth?—There is a very large trade in ther but I have not the figures for that. (*Witness rea ing from memorandum*).—In the third place, (*c*) is accepted, as the result of various Gover ment and Parliamentary Commissions of Inquir that forests, properly managed under the conditio as to soil and climate which obtain generally in Ir land, are in themselves a sound financial investmen apart from many economic advantages derivable fro their existence. While, in the case of turf bogs large extent, it is very doubtful whether reclamatio for agriculture can be really economically effect without State aid or intervention.

41997. Mr. SUTHERLAND.—That is to say you s no doubt about it?—Yes.

41998. To whom does the profit accrue?—The pro from the plantations?

41999. From the economical management of pla tations?—We have practically no scientifical managed woodlands in this country. I am speakin of the evidence given before Parliamentary and oth Commissions mainly as affecting forests in oth countries which are scientifically managed.

42000. That is a very general statement, of cours which we may take upon your authority. Can y tell me the countries in which it is of proved econom advantage?—In France, where I studied; German Holland, Belgium, and Denmark; Denmark and B gium perhaps as much as any. (*Witness readi from memorandum*)—Fourthly (*d*), the State is gen rally the only proprietor who can afford to incur t initial high cost of planting or reclamation on an exte sive scale; who can afford to wait until the woods, et begin to yield interest on the capital invested; a who, above all, perhaps, is in a position to secure th continuity in the system of management which, the case of forestry at least, is a condition essenti to success.

42001. Sir FRANCIS MOWATT.—You have said it doubtful if reclamation for agriculture can be rea economically effected without State aid or interv tion?—Reclamation of turf bogs.

42002. CHAIRMAN.—When you talk about State i tervention there you mean State loss?—Yes.

42003. If the State wishes to turn the bogs in reclaimed agricultural areas, that can be done, b only at a great loss of public money; on the oth hand, there would be much less loss if the State we to acquire these bogs for the purpose of planting?—Or at any rate not more. The Bog Commission

* See p. 337.

10 estimated that in any event the State would have arrange for passage over the bogs in order to get any necessary lime or other manures which the bogs

42004. Sir Francis Mowatt.—Do you make the distinction between the two that the one requires State tervention and the other does not, because you also y that the two of them, both turf bogs and afforestion, require State aid and intervention?—Yes, but subsequently draw a distinction between the two.

42005. Most Rev. Dr. O'Donnell.—Is it your object to show that planting with trees is economic, d that reclamation for agricultural purposes involves necessarily a loss?—No. That is not my ject. I say that on many waste lands the most nomic method of utilising the soil is by afforesting—lands of very poor quality, which perhaps let at xpence or less an acre.

42006. What you mean is that there are some lands such a quality that the best use for them is forestation rather than to attempt reclamation for gricultural purposes?—Yes. In the case of extensive rf bogs I make out that in order to reclaim them me State aid is required, and the means of applying me sort of State control such as is adopted in enmark and Schleswig Holstein.

42007. Sir Francis Mowatt.—Is turf bog not suitble for afforestation?—It is not. (*Witness, reading emorandum*).—These considerations have, no doubt, l along applied. But, concurrently with the peration of the Land Purchase Acts, and especially connection with the working of the Act of 1903, the uestion has become of more immediate interest and nportance.

42008. Most Rev. Dr. O'Donnell.—Is not it a fact hat underlying turf bogs we find a great quantity f timber that apparently grew there?—In many laces that is so.

42009. How is that explained?—There are various heories as to the origin of the bogs. I don't think has ever been satisfactorily proved how they arose. That timber was there at one time in many parts of he country is undoubted. It is dug up every day.

42010. Sir Francis Mowatt.—Does not it follow ther that the trees grew on the bogland or that the og has grown after the trees died down?—I think necessarily follows.

42011. One of those two things happened?—I don't ee any other alternative.

42012. You adopt the second, and say the bog ould not stand timber?—The bog need not have een so deep at that time. The climate may have hanged considerably.

42013. Mr. Sutherland.—Do you think the irruption of the bog destroyed the timber or some other eans?—I have never really formed any conclusion. o much has been written on the subject, and there ave been so many varying statements, mostly dogmatic, on the subject that I don't know what to think bout it. No doubt the bog grows in many places t present by the growth of the bog mosses. Very ften the wettest portion of a bog is the highest rtion.

42014. Most Rev. Dr. O'Donnell.—Did you ever ave the experience of trying to grow Scotch fir on bog?—It has been tried a great deal in Ireland, nd a great deal under more scientific conditions in North Germany, and the conclusion I bring out ater on is that on deep bogs it can never be grown ith success unless the bogs are previously drained and manured, which would be very expensive.

42015. Mr Sutherland.—Have you formed any ea as to whether the Irish forests whose remains e see in these bogs were destroyed by fire: have you een charred roots?—Yes, but whether the charring as posterior or anterior to deep bog formation I cannot say. Some of it seems recent to me. I think that he mere destruction of the timber in historic times ay have resulted in a greater off-rush of water from he hills, which certainly would have increased the rowth of the bog below.

42016. Chairman.—How do you mean—the off-rush of water from the hills?—In consequence of the denudation of the slopes. There may also have been a change of climate

42017. Would the planting have helped to keep up he water?—Tree-growth keeps it up enormously; so much so that waterworks, catchment areas, like those of Liverpool, are clothed with firs, and the French Government for many years has spent large sums each year in acquiring pasture lands in order to plant them up and cure the torrents which carry down the *débris* and stones to the lowlands underneath.

42018. Is it that the roots have increased the amount of water absorbed?—The fallen leaves take up an immense amount of water. Then the living leaves stop a certain amount of the rainfall; but the main effect is by the roots, and the layer of decaying vegetable matter which sometimes is several feet deep and takes up an immense quantity of water. (*Witness, reading memorandum*)—If extensive tracts of waste land are to be acquired for afforestation, fairly free from adverse rights and at a reasonable cost, it is almost a case of "now or never." For once allow such land to be transferred from large owners to numerous small peasant proprietors with divergent interests, the difficulty of securing sufficiently large and conveniently situated tracts, of arranging, commuting, or transferring rights of pasturage and passage, will be enormously increased, apart altogether from the increased price which, in such circumstances, would probably have to be paid for the land. Ireland was formerly well wooded and noted for the excellence of its timber supplies. In comparison with great timber-producing countries, such as Russia and Norway, it is very favourably circumstanced for the practice of economic forestry. Potentially one of the best timber-growing countries, it now is, with the exception of Portugal, the least wooded of Europe. The Land Act of 1903 has aggravated the position. For, not merely has the working of the Act led directly to the rapid, reckless, and improvident felling of trees, and to the permanent destruction of woodland crops throughout the country, but the very existence of woods in present conditions interferes with and retards the transfer of tenanted or untenanted lands.

42019. Is it in your knowledge that since the Act of 1903 a great many trees have been cut down?—Yes.

42020. They have been cut down since the Act of 1903 faster than they were before?—That is not within my own knowledge, because in order to have personal knowledge of that I must have been travelling extensively through the country both before and after; but it is beyond doubt in my mind, from my own personal observation, from the trade journals, from the public Press, and from my interviews with timber merchants, land agents, vendors of land, and other persons.

42021. Of course the purchase of land has been very much accelerated since the Act of 1903. I suppose that is what it really means: it really means that more land has changed hands, and then more trees have been cut down?—Yes, or that vendors are preparing to sell their estates, and that in order to do that they get rid of a commodity—

42022. Is it the vendors who have been cutting down the trees?—As well as the tenant purchasers.

42023. Which to the greater extent?—The tenant purchaser, naturally, cuts down single trees, small belts, and wind screens. You would not get much else on his land. The vendors have plantations, and they not infrequently fell the outlying portions which they do not keep with their demesnes.

42024. Sir Francis Mowatt.—We have heard a great deal of evidence in which small holders petitioned that they should have trees set down to make these little protection belts for their residences?—Tree-felling is by no means universally the practice. It has been increasing, but there are distinct evidences of a revival of tree-planting in certain parts. My argument is, taking the whole country, the amount of timber in Ireland is being enormously reduced, and in many parts of the country the tenant purchasers have cut down timber extensively, and in some parts almost cleared the country of timber.

42025. Mr. Kavanagh.—Could you give us the name of a county in which that has occurred?—I don't suggest that they have cleared a whole county.

42026. I would like to hear the name of any one county?—On the Wallace property in the North, in Down, for instance; in Armagh there have been clearances; in various counties in which I have been myself. I don't know whether you mean any very large geographical area. I do not suggest that any very large proportion of a county has been cleared of timber. I do say that, from my own information, and from reports, which I cannot cite unfortunately, which have reached me,

June 11, 1907.

Mr. J. L. Pigot.

there have been extensive clearances of timber. You can see this, within my own knowledge, in certain parts of Limerick, for instance, and in Wicklow, and the West of Ireland. I have contributed myself to this destruction by arranging for unavoidable sales of timber for the Estates Commissioners.

42027. You say that the vendors have cut timber before selling: is that within your knowledge?—It is.

42028. Do you mean woods and plantations or timber in the hedge-rows?—No; woods also.

42029. That would be in their own hands?—That would be in their own hands, the reason being that the Land Act has passed woods by. Woodlands are a special class of property, and the Land Act does not deal with them, except under section 4, which is a section, as you know, empowering the vesting of woods in trustees for certain purposes, and in order to get rid of their estates vendors sell woods for felling. Only the day before yesterday a very large owner of land in Ireland was sent to me by one of the Commissioners, with the following tale. He was selling an estate with a large fine wood adjoining a river. He had come to terms with his tenants as to everything with the exception of this wood. It was a wood about 1½ miles long in a strip. He wished the tenants to buy it; they refused. He said he would cut down the wood, as it was a residue of his estate which he practically had to get rid of, and could not protect it himself. The tenants declined to allow that to be done if they were to purchase their holdings, whereupon he came to the Estates Commissioners for advice. It was aranged he should apply to the Commissioners to purchase his wood. It was his representative arranged that. There are many cases of the kind. I am in a peculiarly advantageous position for knowing what is being done, inasmuch as the map of every estate being sold in Ireland passes under my eye. It is part of my official duties to satisfy myself that the map exhibits the vendor's estate, what he is retaining, what he is selling, what he wants the Estates Commissioners to purchase, what he wants to sell and re-purchase, and, incidentally, it is necessary to ask the vendor's representatives certain questions.

42030. Sir FRANCIS MOWATT.—With what object are the Commissioners going to buy this piece of wood—to maintain it or fell the timber?—If an estate is offered it may contain certain plantations, and they may have to buy the whole. They are not a Forestry Department and can only buy a tract of land in order to resell with a prospect of profit, or, at any rate, without prospect of loss; and these woods, as I bring out further on, are a source of embarrassment.

42031. CHAIRMAN.—Embarrassment to the Estates Commissioners, in this sense, that they have no staff to deal with them or protect them?—They can only purchase them to sell them, strictly speaking.

42032. It would be always an embarrassment to a forestry department to have a whole lot of little strips of wood stuck about all over the country?—It would.

42033. When you speak of the economic advantages derivable from forests, I suppose, you have in your mind great contiguous tracts of forest?—Large tracts.

42034. All lying together?—As far as possible together.

42035. Tracts which would lend themselves to be dealt with in blocks?—Yes.

42036. But you could never make money out of merely having a wood here and a wood there—could you?—No.

42037. It would take an immense staff to look after them?—Yes, unless the small woods were required in the interests of the tenants themselves, as very often they are, in which case the tenant purchasers themselves could assist in the preservation of the woods.

42038. Most Rev. Dr. O'DONNELL.—By a committee of tenants?—Yes, or by individual tenants.

42039. Sir Francis asked you whether you were aware that tenants asked to have shelter belts constructed on their farms?—Yes, I am aware of that.

42040. At Buncrana, tenants also suggested to the Commission that a certain zone should be planted and held by trustees for the tenants; has that come under your notice?—No, but they have so often requested the landlord to plant for shelter that I can easily imagine that they would ask to have it done.

CHAIRMAN.—How would those be looked after?

Most Rev. Dr. O'DONNELL.—I think the idea was that they would look after these common possessions pretty much as they would look after grazing in common.

CHAIRMAN.—They would all belong to the tenants, and a committee of the tenants would all decide what was to be done with them, when planted, when to cut down, and so forth.

Most Rev. Dr. O'DONNELL.—Quite so. In such circumstances the immediate control would be under the committee. There might be general direction and advice from the forestry department.

CHAIRMAN.—Then the forestry department would be only a dead and alive sort of thing that might at times be consulted by a committee that was anxious to learn.

42041. Most Rev. Dr. O'DONNELL.—Take, for instance, the case that has been mentioned of a forest that is a white elephant on the hands of the Estates Commissioners, might they not arrange to convey that forest to trustees for tenants to be managed for them?—I don't think trustees in the ordinary sense of the word can manage forests, because very technical and expert knowledge is required. The only justification for doing anything with a forest is that you do not lessen the producing capacity of the soil, and ninety-nine people out of one hundred who would meddle with a plantation in good order would lessen the productive capacity.

42042. I should say a committee of the tenants rather than trustees?—That is not the principle adopted by other Governments, notably the French and the German.

42043. Mr. SUTHERLAND.—Is it not the communes in France that manage it?—Yes; they hold all their forests and get the profits, but the control is most strictly vested in the State.

42044. That is practically what the Bishop is saying?—He said that they should be managed by trustees.

42045. That answers to the commune?—The trustees in France are a highly-trained body of officers.

42046. Most Rev. Dr. O'DONNELL.—The suggestion put before us was that the possession would belong to the tenants who had been in the habit of grazing on that mountain side, and that the tenants would agree to keep off their cattle and sheep to whatever extent was necessary for the maintenance of the forest or the tree plantation, and that then the property in it and the whole management of it should be controlled by a committee representing the tenants.

42047. CHAIRMAN.—Would it be possible to have these things vested in the County Councils; to allow the County Councils to have a forestry committee to look after them?—I don't approve of that for the same reason that the French Government cannot allow the local interests, which are of varying nature, to interfere with such an essentially conservative business as forestry management; and, while the enjoyment of the woods and their proprietorship are, of course, vested in the local bodies which are encouraged to acquire woods, the management is strictly vested in a State governing body which is competent to manage.

42048. The commune represents, as I understand, as far as possible, our County Council?—It would be a group of communes like the Conseil d'Arrondissements or the Conseil Général.

42049. Have we got anything analogous to the commune?—It is a self-contained village community.

42050. Mr. SUTHERLAND.—It holds property in common?—Yes.

Mr. SUTHERLAND.—That is the essential part of it.

42051. CHAIRMAN.—They hold these woods?—Yes.

42052. The management is taken out of their hands entirely?—Yes.

42053. And is conducted by a State Department?—Yes.

42054. The State pays its expenses out of the forests, and any profits that may be over go to the commune—is that it?—Yes. There may be very few expenses; sometimes hardly any.

42055. That may be a system which is possible in France; I doubt very much whether it would be possible here?—We have not any such thing.

42056. Most Rev. Dr. O'DONNELL.—Government interference in the affairs of individuals is carried much further on the Continent, especially in France, than we know it in these countries?—That is so.

42057. CHAIRMAN.—The system that they have in rance is not at all the system that the Bishop is ggesting?—No.

42058. CHAIRMAN.—The essential characteristic of e French system is that the management is not sted in the local body, but in the State body?—Yes.

42059. Most Rev. Dr. O'DONNELL.—The suggestions n Ireland certainly were that the local body should the main control, but not without some direction om a central authority; apparently in France, om your statement, the central authority rules the hole thing?—Yes, but meeting as far as possible e wishes previously expressed of the commune.

42060. CHAIRMAN.—What would happen if the cal body wished to do one thing and the State epartment disapproved; would you suggest that in at case the Department should have the right of reventing the local body who really owned the thing om carrying out their desire?

Most Rev. Dr. O'DONNELL.—The question belongs a regular series of such difficulties that might rise, but I do not think that it would be trouble-me to adjust them. Now and then it might be nconvenient to let the local body have its way?—Yes. enerally it would not be. There might be mistakes.

42062. Sir FRANCIS MOWATT.—Could you get any xpert knowledge out of a representative committee f small farmers; the knowledge required to conduct conomically a plantation; how would they know at hat time and at what age to cut timber?—So far as have any knowledge of the subject, I don't think it ould be possible to expect them to manage properly. t is quite out of the question. Besides, there is an normous amount of evidence already recorded point-ng in the same direction.

42063. Most Rev. Dr. O'DONNELL.—Are you aware hat the late Dr. Lyons interested himself very much afforestation?—Yes. I procured some of his infor-nation for him.

42064. Are you aware that in some instances he ot the small farmers, or his agent got some of them, nder the direction of a skilled forester, to put in the rees?—I did not remember that.

42065. That was done?—I don't know anything bout it myself, but as bearing on the remarks that ave been made, I think what was conveyed to the ccupiers who were interested was this, that if from ime to time they had the visits of the skilled orester it would not be so difficult for them to look fter the plants; I do not know whether that is so r not, but that I am sure was the drift of the nessage given to the persons interested. (*Witness, eading from memorandum*)—Apart from the woods ncluded in residential demesnes and outlying woods f considerable extent which might, without undue ost, be preserved by vendors for sporting or ther purposes, many of the lands already planted re so small in area or so situated that they could ot be effectually protected from injury, still less reserved for game, once the surrounding tenanted r grass lands are sold. A wood of this class may e on rough mountain land, or on shallow or partly rained bog, and might with advantage to the neigh-ourhood or to the country as a whole be preserved r added to, where there are any person or public ody directly interested in safeguarding it. Ex-perience has already shown that, in the case of states purchased by the Land Commission under Section 6 of the Act, the increased value of the estate fter re-arrangement of the holdings and the sub-division of untenanted lands may allow of woods of his kind (originally, perhaps, cheaply purchased) eing re-sold at a low figure or retained by the nation lmost free of cost on the purchase-amount. Possibly, n the other hand, such a wood ought properly to disappear, having regard to its prospective value or o the superior requirements of agriculture in the icinity There is, however, nobody, no agency nor State Department to decide or to advise with autho-rity. The wood, being an incubus to the vendor who an find no purchaser save a timber-merchant, con-sequently disappears, often while the trees are still mmature. The draining of the soil and the plant-ng may have been paid for by a loan from public funds. I learned of one case where, a dispute having occurred between the vendor and his tenants (who had signed purchase-agreements) regarding the rights to the timber, vendor and tenants in competition removed and sold all the available trees with the utmost despatch. Once the fee-simple of the land is vested in a tenant-purchaser, the latter has full right to fell and sell timber growing on the land, unless, in so doing, he lowers unduly the value of the land as security for the purchase money advanced. Yet, even if the Land Commission has the right to intervene it lacks the power to prevent. Consequently, trees on purchased holdings are being felled at an increasingly rapid rate, and often in sheer ignorance of the real value of the timber for purposes of shelter, construction, etc. The presence of outlying scattered woods may, so long as the trees remain unfelled, prevent a landlord from selling his estate to the Land Commission, which, while empowered to hold woodlands temporarily, has no means of managing or even of protecting them for the time being. Cases have arisen where the Land Commission, after purchasing an estate for re-sale, has found the existing woods a source of embarrassment. If this be so while estates are, in the main, sold under arrangements made directly between vendor and tenantry, in what manner may a large increase of sales to the Land Commission be expected to affect the question? If compulsory sale should be sanctioned by law I assume that practically all the untenanted land of poor quality in each estate affected must be purchased, not merely such land as might immediately serve for the enlargement of holdings or in schemes of migration. While the difficulty of dealing with existing woods or plantations would be increased proportionately to the greater wooded area purchased by the Land Commission, the means for acquiring extensive tracts of mountain and heath land, suited to planting, would be immensely facilitated owing to the opportunities afforded by the re-arrangement of the estates prior to re-sale to the tenants. No such opportunities on so great a scale are ever likely to recur. Neglect to take advantage of, or at least to study them with a view to the creation of national forest estates may be considered in connection with the report of the Departmental (Board of Agriculture) Committee, appointed in 1902, on British forestry. The report brought out that, for reasons given, "The great area of waste lands in these islands, which might be afforested and with regard to which such valuable evidence has been held, thus become a matter of grave national concern."

42066. CHAIRMAN.—We are always hearing about these great areas of waste lands. I don't know where they exist. I have never seen them. Wherever we go we are told that such and such a mountain is very valuable for grazing, and that they want it for a sheep mountain or something else. Where you are able to find these great tracts of mountain that are suitable for nothing else except planting puzzles me. I have never seen any.

Mr. SUTHERLAND.—If they are useless for anything else how would you grow timber?—You may see timber on the rock of Toulon planted with crowbars where even grass did not grow. You see the Italian and other Governments, whose countries suffer from the denudation of the hillsides, undertaking almost heroic works to remedy this defect.

42068. CHAIRMAN.—Am not I right in thinking that wherever we have been we have never come across waste land?

Most Rev. Dr. O'DONNELL.—We have seen no land which was not being turned to some account, but I think it has also been put before the Commission in its country sessions that there are tracts of mountain sides that would be better under plantations than devoted to their present use?—It was so stated.

42069. CHAIRMAN.—Have we been in any place where there were mountains, bogs, and so on, in the hands of the landlords which were not asked for by tenants for such purposes as individual or communal grazing or turbary?

42070. Most Rev. Dr. O'DONNELL.—I am sure you are perfectly right, that each individual purchaser would be interested in getting an addition to his grazing tract, whether that was the best use of that particular mountain side or not. The evidence we got was from people of a representative capacity, saying that taking the tenants as a whole it would be better for them not to have individual rights for grazing purposes on a particular tract, but that it would be better on the whole to have those tracts put under timber. That is my impression.

June 11, 1907.

Mr. J. L. Pigot.

42071. CHAIRMAN.—If you have a very strong feeling in a district that such and such a mountain side if obtained would be a very valuable grazing tract, would it be possible to take that permanently away from the people and to plant it without creating friction?—My inquiries lead me to think that there would be difficulty in getting them to agree freely to give up these mountain slopes. On the other hand, it has been given in evidence, for instance, by Father Flannery, a parish priest in Galway——

42072. But he was an enthusiast?—Yes, but it has been given in evidence before your own Commission by Mr. Fitzgibbon and by Lord Castletown.

42073. Mr. SUTHERLAND.—Did you read evidence from any tenant from whom the land would be taken?—No.

42074. Mr. SUTHERLAND.—I think not. I don't think that his lordship can quote an instance of that either.

42075. Sir FRANCIS MOWATT.—My recollection is that it has not been carried further than this, that there was some use to be made out of some of this mountain land; that none of it is derelict, but that nevertheless it could be got from the tenant practically at a very small price for timber purposes?—That is what I suggest here.

42076. Most Rev. Dr. O'DONNELL.—That is my recollection also. My recollection is that in two forms the project was put before us. It was suggested almost universally that on most farms there was an angle of land not turned to much account, which could be planted as a shelter belt; and it was also suggested to us in several places—this is a different project—that there were tracts of mountain side which no doubt the tenant desired to have put with his own property, but which on a fair view of the case would be better taken up at some compensation from the tenant and allocated for planting?—Yes.

Sir FRANCIS MOWATT.—Would it come to this: if the Congested Districts Board, for instance, buy an estate and some grass land to increase the holdings of the small holders they might make it portion of their bargain with the small holders that they should have no claim to the less valuable mountain sides, and that that should be withdrawn for the general purposes of planting.

Mr. KAVANAGH.—But there are probably existing rights already on it which they could not withdraw.

Sir FRANCIS MOWATT.—You might say to a man: "You have four acres here and the right of feeding on the hillside; you will get five acres somewhere else and give up your hillside feeding."

Most Rev. Dr. O'DONNELL.—Quite so. I know a property in Donegal which has been offered to the Congested Districts Board. On that property there are thousands of acres of mountain in the hands of the owner. It would be very important for the occupiers to have that mountain given over to them on a sale, and it ought to be in the main, but you could reserve hundreds of acres also for planting.

42078. CHAIRMAN.—In your opinion is the Congested Districts Board a proper body to do work of that kind: would not you want a regular forestry department?—I suggest that there should be no new Government Department, but that the Department of Agriculture should take up if possible the acquisition of waste lands, or at any rate the prevention of needless forest waste in Ireland, as it was intended to do under its constituting Act. One of the objects of its formation was to deal with the forest question. Unfortunately under the terms of the Act it can only act experimentally or for the purpose of instruction, and its funds are very limited and its legal power of holding land insufficient. My proposal is that it should take over the existing plantations, which ought to be preserved permanently in the public interest, and, as far as ways and means exist during the transfer of land from vendors to tenants, especially in the West of Ireland, it should endeavour to secure waste lands, if any such became available, with a view to planting them hereafter. That is really the gist of my proposal.

42079. Mr. SUTHERLAND.—That existing plantations should be acquired by a public department?—That is if, after due inquiry, it is thought that they should be permanently maintained. A great many obviously must be striped up with the grass lands. (*Witness, reading from memorandum*)—The land which might become available for tree-planting on an extensive scale may, perhaps, be conveniently classed as under:—(*a*) Mountain and heath land; (*b*) Turf bogs; (*c*) Narrow ravines, steep slopes, and rocky or poor land in sub-montane or low-lying districts generally. The mountain and heath lands, comprising in all some 2½ million acres, are the tracts naturally best suited to economic forestry.

42080. CHAIRMAN.—You don't suggest that the 2½ million acres is all waste land?—No. Draining, before planting, is usually unnecessary or inexpensive; fencing and general protection may be economically arranged for wherever blocks of land sufficiently large and with suitable boundaries can be secured; while conditions as to soil and climate are certainly not less favourable than in other European countries where forestry for very many years has been successfully practised on similar lands.

42081. Sir FRANCIS MOWATT.—Do you know any European country in which extensive plantations have been economically grown and dealt with in turf bog?—I do not, but I am talking of mountain and heather lands. I know of some woods that have been economically grown on shallow turf bog, especially shallow mountain turf bog, and I know of one deep bog that has been successfully planted, but whether successfully from the financial point of view I cannot say. In view of the large amount sunk in manuring and draining before the trees were planted financial success cannot be certain. (*Witness, reading memorandum*)—The slopes of ravines, and also rocky land, are often eminently suited to profitable tree-planting. There is no reason to doubt that mountain land in Ireland at one time comprised vast tracts of natural forest, whose restoration would greatly improve the natural drainage of the whole country. Whatever measure of fact may underlie the various theories as to the origin of the bogs in Ireland, it will scarcely be questioned that the destruction of the forests in historic times, and especially the denudation of the hillsides and ravines, must have aggravated the condition of the bogs and of low-lying lands, and that re-afforestation could not fail in inducing a contrary effect and in improving generally the arterial drainage of the country. The total area of turf bog is returned at about 1,100,000 acres—that is excluding 398,000 acres of marsh, and presumably all shallow bog or "barren mountain land"—of which (according to a statement prepared in the office of the Estates Commissioners) only 390,000 acres are untenanted. Of the total area, about six-sevenths are, according to the Report of the Bog Commissioners, 1810, comprised between two straight lines drawn from Howth Head to Sligo, and from Wicklow Head to Galway. Large areas of turf bog might, no doubt, be made available for planting. But planting on a bog deeper than three or four feet is generally hazardous culturally and unprofitable financially. Timber of good quality, but usually of the cheaper kinds, can, no doubt, be grown on deep bog which has been drained and to some extent gravelled or otherwise manured. Yet in bog land generally, the acidity and inertness of the bog substance and the absence of mineral nutrients must be overcome before plants which strike deep into the soil can thrive. The draining and manuring necessary to secure this condition entail in forestry, an original capital debt so heavy that financial profit can usually not be expected. But I think the weightiest argument against any attempt to afforest on a large scale Irish turf bogs is that these latter, unlike high mountain and moor lands, may possibly hereafter be profitably reclaimed for pasture and field crops. The Bog Commissioners stated (3rd Report, 1814), in connection with improvements undertaken on the Dillon and French Estates, that "the red bogs may all be reduced to tracts of profitable pasture and meadow, and in many cases may be applied to the produce of oats and potatoes, if gravel can be had from the under strata, as at Aughalour." In their final Report (1814) the Commissioners said: "From all the above data we can confidently pronounce that the extent of Peat Soil in Ireland exceeds two millions eight hundred and thirty thousand English acres, of which we have shown at least 1,576,000 to consist of flat red bog, all of which, according to the opinions above detailed, might be converted to the general purposes of agriculture; the

emaining 1,255,000 acres form the covering of ıountains, of which a very large proportion might e improved at a small expense, for pasture, or still ıore beneficially applied to the purposes of planta- ion; we wish, indeed, it were possible for our Re- orts to fix the attention of their proprietors upon his subject, so connected with the interests of the 3ritish Empire."

42082. CHAIRMAN.—This is 1814?—Trom 1810 to 814. It was a very exhaustive report.

42083. They thought the bog on the mountain side uld be improved for agriculture at a small cost?— r still more beneficially planted up. At that time ıe wonderful results obtained cheaply in improving aste land (as in Luxembourg and Holland) by the se of lupins and artificial manures, such as kainit nd basic slag, were unknown. With intensive cul- vation and quick returns on capital outlay the turf gs may hereafter pay well in agriculture where ıccess in forestry must at best be doubtful or ıediocre. With extensive mountain tracts, then, aturally adapted to forest culture, I would rule ut as unsuited to tree-planting all bogs of large xtent or more than a few feet deep.

42084. Mr. SUTHERLAND.—What effect has the use f lupins on land?—It increases the quantity of free itrogen in the soil. It is like lucerne and those lants, peas and so forth, which are put in as a ıanure.

42085. It forms a surface mould?—Yes. It seems npossible to forecast, with any approach to accu- ıcy, what total area of mountain or moorland might e acquired for forestry purposes. The agricultural eturns afford no precise indications. Thus, of the wo and a quarter million acres of "barren mountain ınd" in Ireland, it appears that (excluding such ıountain as may be included in "demesnes") only 54,000 acres are untenanted. In addition, there are 86,000 acres of untenanted land, with a poor law aluation ranging up to 2*s.* 6*d.* per acre, some or ıost of which is probably mountain pasture. I think unreasonable to suppose that waste land for forestry urposes should be sought for only amongst these 40,000 acres of untenanted land. Land of this class ıay be tenanted one year and untenanted the next. he poor law valuation indicates to some extent the resent utility of these tracts. The valuation of the ntire area of 354,000 acres of untenanted mountain s, on the average, 5½*d.* per acre; that of the 286,000 cres valued up to 2*s.* 6*d.* is, all round, only 8½*d.* n acre. In evidence which applied to the West enerally, from West Cork to Donegal, given before he Select Committee on Forestry, 1887, it was stated hat immense areas could be acquired for about 10*s.* n acre, and that the people—in Connemara at least would cheerfully acquiesce in reservation for forestry urposes on account of the betterment of their hold- ngs and the provision of forest produce which tree- lanting would secure. The result of my own in- uiries certainly does not accord with that evidence, hat is as to the cheerful acquiescence of the people. Yet there are two outstanding propositions in point. First, that the real value of much of this land to he peasantry must often be very small, and com- ensation for disturbance, if paid in cash, would be orrespondingly low. And, secondly, that many people may be expected to relinquish willingly their rights, enabling them to pasture a few animals ver large tracts, in exchange for a very much maller area of good land near to their homesteads. Compulsory sale, the division of untenanted pasture ands, and the re-arrangement of holdings would ive opportunities of effecting such exchanges. It oes not appear unreasonable to assume that tracts f suitable waste land, much in excess of the area hich it would be practicable to plant within, say, fifty years, might be acquired at a low cost per acre. There are at present, according to the agricultural eturns, 301,000 acres of woods and plantations, of which 95,000 acres are classed as untenanted, the alance (or 206,000 acres) being presumably included or the most part in demesne land. Assuming that all these woods ought to be permanently maintained a very improbable contingency—and that it were esired to increase the area-percentage of forested and in Ireland to the figure for the United King- iom (four per cent.), the total wooded area should e increased from 301,000 to 773,000 acres. Apart rom mountain and bog, there are, as noted above, ome 286,000 acres of untenanted land, not suited for the enlargement of uneconomic holdings, of which the total valuation is only £10,135. The whole of this might possibly be acquired for a payment of from £100,000 to £200,000. In countries such as Germany, or even in small states like Belgium, where the value of forests in rural and national economy is well understood by those in authority who are supported by informed public opinion, opportunities such as these of adding to the national forest wealth would not be lightly disregarded. The probability seems to be that more land than could in reason be utilised in forestry might be secured on easy terms. Thus in poor estates in the West, where the sporting rights may bring in one-half or more of the total rental, a proprietor might eagerly embrace any opportunity of parting with mountain, provided he retained the sporting rights, which in many cases are much enhanced in value as a result of planting. The acquisition of large blocks of land is desirable in connection with economical forest management, but this object might be seriously interfered with were it possible to deal only with the mountain waste included in one or in several disconnected estates in the same neighbourhood. Yet, while large tracts seem generally desirable for forestry, I think it would, for various reasons, be well to commence any great scheme of planting with smaller areas, say, of about 500 acres, situated not far from villages or supplies of labour. The Select Committee of the House of Commons on Forestry reported (1887), amongst other matters, that strong evidence had been given before them that large tracts of land, especially in Scotland and Ireland, might be planted with advantage. The Committee referred to the considerable social and economic advantages which, apart from any immediate pecuniary benefits, would accrue from an extensive system of planting, especially on the West side of Ireland, and dwelt upon the importance of tree-planting as an accessory to agriculture. The Departmental Committee, appointed by the Board of Agriculture in 1902 to report upon British forestry, did not specially extend its inquiries to Ireland. It reported that, on the highest authority, there is in the United Kingdom a very large area of waste, heather and rough pasture, or land out of cultivation, amounting in all to 21,000,000 acres on a large proportion of which forestry could be profitably undertaken; that, even with indifferent management, excellent returns had often been obtained from plantations formed on land of little or no value for any other purpose; that the possibilities of forestry as a means of furnishing remunerative labour to an increased rural population are great; and that the proper utilisation of waste lands had become a matter of grave national concern. At that time the present rapid disintegration of landed interests in Ireland has not commenced, and the Committee did "not feel justified in urging the Government to embark forthwith upon any general scheme of State forests under present circumstances." The general importance of the question has since been further recognised by regular grants from the Treasury for aiding instruction in forestry. With the exception of a few woods vested in the Department of Agriculture, section 4 of the Land Act of 1903 has proved inoperative in preserving woods and plantations or in the setting apart of lands for planting.

42086. Sir FRANCIS MOWATT.—What woods are vested in the Department of Agriculture?—There are the woods on the Avondale Estate, which was purchased, whether for a cash payment or under the Land Acts I cannot say. Then there are the Coolgreany woods, in the County Wexford, on a Plan of Campaign estate, and there is one other lot of woods I think, in the County Wexford.

42087. What acreage do the three woods run to altogether?—A couple of thousand acres or less. In 1904 the Agricultural Department represented to the Estates Commissioners that it had previously been debarred from exercising its functions in the matter of forestry because suitable land was almost entirely in private hands, but that the Act of 1903 had fundamentally changed the conditions. Arrangements were accordingly made whereby the Department should be given the option of purchasing any woods or lands suited to planting offered for sale to the Commissioners. But nothing was done owing, not to lack of opportunity to acquire suitable lands, but to want of funds, and also, perhaps, to the fact that the Department is unprovided with any proper agency for dealing with the forestry question. Under the

June 11, 1907.

Mr. J. L. Pigot.

Agricultural and Technical Instruction Act of 1899, County Councils are empowered to strike a rate for forestry purposes, but only a few of the counties appear to have moved in the matter.

42088. Is there any definition in the Act of what forestry purposes means?—Yes. It includes aiding and developing forestry. I believe that it gives them very wide powers. By the Act of 1891 constituting the Congested Districts Board, the Board may take such steps as they may deem fit for aiding and developing forestry. In the Agricultural and Technical Instruction Act the term is rural industries, including forestry. Under section 6 of the constituting Act of 1899 the Agricultural Department may cause to be made, or aid in making, experiments, collect or aid in collecting such information, as they may think important, for the purposes of agriculture and other rural industries. These include the aiding, improving, and developing of forestry and any industries connected with and subservient thereto; and shall also include the aiding and facilitating of the carriage and distribution of produce.

42089. Mr. KAVANAGH.—But the rate they can levy is limited to a very small amount?—They practically have no funds. It is the County Councils that can levy. The Councils are only allowed to raise a maximum rate of a penny for forestry and other purposes, and most of that is already hypothecated to other purposes.

42090. The forestry is included in the penny in the £?—Yes.

42091. That practically means that it is inoperative?—Yes, except in a few counties like Kildare, where the penny was not exhausted, and they have raised a rate of a half-penny, but even that will only allow of their doing a mere flea-bite.

42092. So with the best intentions it is impossible for the County Councils to do anything in the way of forestry?—That is what I believe. (*Witness, reading from memorandum*)—In this case also funds were wanting, apart from other difficulties, and practically nothing has been done. In November, 1905, the Department of Agriculture drew the attention of County Committees of Agriculture to "the present wholesale destruction of timber trees in many districts of Ireland, where trees are being cut down without regard to their present usefulness for shelter or ornament, or to their value as timber when felled"; and the Committees were invited to co-operate in "arresting the general policy of destruction," and to encourage tree-planting. Such circulars can be of little avail. The evil cannot be treated by posting up warning notices at the constabulary barracks. Section 4 of the Act of 1903 presumably aimed at the reservation, for management in public or general interests, of portions of estates which can be more economically utilised for forestry and other purposes named than by being sold to individuals. In this aim, so far as forestry is concerned, not merely has the Act signally failed—it has operated in the directly contrary direction. The actions of vendors, tenant purchasers, and of the Land Commission all tend to destroy or lessen the timber resources, already so inadequate, of the country. On the other hand, the administrative department, expressly constituted by the Legislature to deal with the subject, that is to say the Agricultural Department, practically acknowledges its impotence to remedy the evils which it deplores, or to profit by the openings given by the Land Act.

42093. Most Rev. Dr. O'DONNELL.—What is the source of this impotence—want of money?—Want of money and want of legal authority. They cannot, I believe, even legally hold lands as trustees under the Land Act. I don't give that as a fact, but I have very good reason for believing it. County Councils cannot hold as trustees for the purposes of the Land Act of 1903, though Rural District Councils can hold land for labourers' cottages. (*Witness, reading from memorandum*)—The western counties offer the greatest scope both for the protection of existing woodlands and for the reservation to the State of lands for afforestation. In my notes I give a tabular statement comparing the areas of wood, bog, mountain, and of untenanted land valued at 2*s.* 6*d.* an acre or less, for each of the administrative counties comprising congested electoral divisions, with the corresponding areas for the whole of Ireland. These counties contain nearly one-third of the total wooded area in Ireland, and of "mountain" about 70 per cent. of the area classed as such; while they include over 80 per cent. of the untenanted land valued at not more than 2*s.* 6*d.* Assuming that a scheme of compulsory purchase, such as that proposed to the Commission* were applied, the State would become the proprietor of practically all the waste lands in these districts. No re-arrangement of agricultural holdings could possibly deal finally with all these lands; while, on the other hand, until the holdings were in course of re-arrangement, it would be impossible to say definitely what lands are or are not "waste," or where and how much of the waste is best suited to profitable tree-planting. All that seems possible to predict is that, in the course of such a scheme of land-purchase, the agency responsible for distributing the lands will find itself compelled to set apart extensive tracts of waste moor and mountain, and that the lands so set apart will ultimately prove more or less suited to economic forestry according as timely measures are taken, while the general land-settlement of the country is still in progress, to inspect and classify them, and to arrange suitable boundaries as well as the rights of user to which they must remain subject. Very possibly larger areas might be set apart than the State itself could reasonably expect ever to plant up. That would be, I think, no reason why the State should not temporarily hold excess waste lands for subsequent disposal. The permanent conservancy of existing woods and the afforestation of waste lands on a large scale in the congested district counties would seem to involve something more than the "improvement" of estates purchased by the Land Commission, as contemplated by the Act of 1903. But forestry, according to the Commissions of Inquiry on the subject, would improve generally the condition of the West, and was within the purview of the work of the Congested Districts Board. The agency administering compulsory purchase in the congested districts could, no doubt, if properly equipped, undertake new planting and manage existing woods. But such an agency could only touch one side of the forest question in Ireland. It would not hinder the rapid and reckless destruction of timber in other parts of the country. In the case of direct sales of land, vendors are now constantly selling to tenants lands some of which are, economically, surplus lands for the tenants' purposes, and are thus perpetuating and increasing the difficulties in the way of properly utilising such lands. The obstacles at present in the way of preserving outlying woods, surrounded by newly-purchased tenanted lands, are not experienced in the West only. And in other parts there are extensive mountain tracts, some of which are known to be suited to planting, as in Tipperary (68,000 acres) and Tyrone (102,000 acres). Again, any comprehensive scheme of State forestry must be permanent in its nature, and could only mature financially a century or two hence, when the problem of congestion will have been forgotten. From the financial standpoint, money carefully invested in forestry may offer as good security as (in the opinion of some it offers security better than) an investment secured on agricultural land. But it is quite certain that advances made by the State for purposes of economic forestry (*i.e.*, forestry so regulated as to give the highest possible nett return in money on the capital invested) could not be recovered with the certainty and regularity expected in the case of Irish land-purchase advances. In my notes I deal with the cost of forestry operations, but my observations are, perhaps, too technical to read now. Having regard to the foregoing considerations, I think that a special Forestry Branch should be incorporated with the Department of Agriculture and Technical Industries. The Department would take over (and plant up as funds permitted) surplus Crown waste lands previously ascertained to be suitable for afforestation, as well as any plantations purchased under the Act (by the Estates Commissioners or the Congested Districts Board) which ought to be permanently preserved.

42094. Sir FRANCIS MOWATT.—What are the surplus Crown and waste lands?—I am making the recommendation that the Department purchase them. They have to be got rid of somehow. The Department should also be in a position to purchase waste land or formed woods direct from vendors of land.

* See Appendix to Third Report of the Commission [Cd. 3414, 1907], Questions 15632 *et seq.*

would further be charged with the management own woods now existing, as well as with such icultural or arboricultural work as is now per- ed under various Government authorities. ngst its more important duties would be the sion and diffusion of useful information bear- pon tree-planting in relation to agriculture and raising of stock, as is done by the Forestry au of the United States Government. The rtment, in short, would deal with forestry as of the general question of land-settlement, with w to improve agriculture and develop industries ssisting in arboriculture on farms and by creating al forest property. I am not competent to with the financial questions which would be ved in the carrying into effect of the scheme of work outlined above. Funds to a certain mum amount should be ear-marked for new ing for instructional purposes. Perhaps the m quit rents and the sums for which they are med under the Land Act might be so utilised. s understood that practically the whole of the e sums received as Quit Rents have been applied he Commissioners of Woods and Forests in the isition or development of Crown property in land. The main duty of the Agricultural De- ment in regard to forestry would, as I conceive, o acquire suitable lands while it is still possible cquire them at all. The advantages claimed for onal forestry in Ireland can only be secured if fficient area of suitable land is obtained fairly ply in advance. And further, if, as seems to be case, very large tracts of suitable land may be red very cheaply, money invested in their pur- e must be the best possible investment at the ent time in any large scheme of national econo- forestry. I think the protection of isolated trees f shelter-belt timber in holdings vested under the d Purchase Acts should be rendered easier or sible by a change in the law. As affecting the rity for the advance, or the real interest of the nt-purchaser, or the amenities of country life erally, it seems deplorable to leave the door open the present widespread destruction of hedgerow other trees. But it may be noted that former s, or the terms on which the tenantry were re- red to plant or to refrain from cutting timber s, often operated very harshly. This is parti- rly so with Ash.

2095. CHAIRMAN.—How would you provide for e isolated trees and shelter belts of timber?—I not gone into that. It is a most difficult ques- . The Chief Secretary in an answer given in liament the other night said that it was a very ult question, and should be considered when the d Act was being amended; but it is generally re- ised that you must distinguish between registered non-registered timber. You cannot interfere with stered timber.

2096. What do you call registered timber?—Timber has been registered as having been planted by the ant.

2097. That you cannot interfere with?—I think it rguable whether you can or can not. If an ad- ce is made on the value of the holding it is made every concomitant circumstance that is connected h the holding, but I would not like to interfere h it.

2098. Most Rev. Dr. O'DONNELL.—As regards ter belts on the farm, would you consider such a y as the Parish Committee a good one to en- rage the planting of those shelter belts and main- n them?—I am sorry to say I do not. I would to see it because I prefer these things e as far as possible under local schemes, but with knowledge and experience that I have gained it ld be impossible for me to believe for a moment it could be permanently successful. There ld be a tendency to sacrifice these belts to the needs the moment or the idiosyncracies of particular ple who thought that they could manage them.

2099. Don't you unduly extol Government inter- nce in those things?—I would much rather not e Government interference in those things if you ld, as in other countries, provide popular cation whereby the local men could get the re- site knowledge. I fear that that unfortunately is off in Ireland as regards forestry.

42100. Mr. SUTHERLAND.—Even though you had education there would be a question of self interest coming in compelling those people to cut down trees prematurely?—Yes, and the varying interests of each place which would end not merely in there being thirty-two forestry departments in Ireland, but as many forestry departments as plantations almost.

42101. There would be a tendency to cut down trees rather than to plant them?—Yes.

42102. Sir FRANCIS MOWATT.—What the Bishop means by shelter belts are the double hedges, I assume, which the tenant puts up between his holding and the prevailing wind quarter?—Yes.

42103. That is not a sort of forestry that requires much knowledge?—I agree.

42104. Driving down the other day beside Lough Derg we saw a great deal of it?—I don't think it requires much knowledge. The people are quite intelligent enough to plant them.

42105. So far as those go don't you think that the people might be trusted to look after them themselves?—I think they cannot be trusted for the present, because they don't know in many cases the value of the existing belts which the landlords have maintained. Those they are cutting down in many parts of the country. If the value of these shelter belts were well known they would not think of cutting them down.

42106. The next thing I would like to point out is that these little belts must *ex hypothesi* be on the holdings of the small tenants?—They must.

42107. Within 25 or 30 yards of his house generally?—Yes, if for sheltering the buildings.

42108. You could not ever take that out of his holding, or deal with it and manage it except by the man himself?—Yes.

42109. You might give him a small bonus from the county if he did it well?—Yes.

42110. Forests or plantations to be managed with entire financial success must be of considerable extent?—Yes, generally.

42111. In your proposals in which you contemplate large plantations, are you speaking of anything under 1,000 acres?—Yes, I would consider areas under 1,000 acres, especially where there is an already constituted plantation. In a country like Ireland, where you are so badly off for wood, it depends so much on what neighbouring land there is. If even fifty acres of available waste land were in the vicinity you might extend the area of a plantation and join on to another plantation. I would have any considerable plantation irrespective of the area.

42112. You would consider that desirable, but would you consider that it could be worked financially well?—Not unless it were taken up in connection with others in the neighbourhood.

42113. I understand you to be speaking of the western districts; practically what we call the congested districts. Is not it essential for working plantations financially well that there should be a good road to the market?—It is.

42114. If you have your timber on the hillside with a lot of things below you and no road you have really no market at all?—You should have a road or river or other lines of export.

42115. That, of course, immensely limits the amount of land on which afforestation can be carried on with financial success?—I don't quite follow—because there don't happen for the moment to be any roads?

42116. Because, *ex hypothesi*, there are no roads on high mountain tops?—There were no roads on high mountain tops when the French Government took to developing their immense forests. Afterwards they made their roads to get their timber out. I have constructed them myself where no roads existed, and forests which had been of very little value became very valuable.

42117. I am not saying that it cannot be done at all, but, taking Ireland of to-day, you have to allow for expenses, for instance, of carting, of making good roads across bog, and so forth, as portion of the scheme?—Undoubtedly.

42118. That would add considerably to the expenditure and limit a good deal the area which you could afforest with advantage?—I don't agree as to its

June 11, 1907.

Mr. J. L. Pigot.

limiting the area. It would undoubtedly add to the expenditure. On the other hand, there is every reason to suppose that you would get a greater price for your timber presently, which would more than cover the cost of your roads. Timber is one of the raw commodities of the world of which the price is constantly growing. It has increased twenty per cent. in the twelve years preceding 1902. This is accepted as a truism everywhere in the trade, and by people conversant with the subject, and President Roosevelt mentioned in his speech on forestry, that notwithstanding the tremendous degree in which wood has been supplanted by iron, nevertheless the world's demand for timber is constantly and yearly increasing; so the increased value of the timber might counterbalance that expense.

42119. I only want to draw your attention to that point as to the means of communication with the market. We have had several people before us who say that they have had timber, but practically they found it of no value, because the cost of getting it to market would be far more than the market price which they would get when they got it there?—They have not got enough of good, well-grown timber to justify the conversion of the timber *in situ*.

42120. Mr. KAVANAGH.—Would you say that native timber has increased in value twenty per cent.?—I cannot say that. I happen to know that latterly there has been a very marked rise in connection with the motor industry; for certain classes of hard wood there has been a rise, owing to the demand, for carriage bodies, wheels, felloes, hubs, and spokes. There has been an all-round rise of twenty per cent. in England in prices of imported timber.

42121. You would not say that there is an increase in native timber?—No. I think, on the contrary, it is decreasing if anything, on the whole.

42122. Mr. SUTHERLAND.—The drawback to timber is that you have to wait forty years for your harvest?—Or more for large hard wood, which is one of the best paying markets you could have.

42123. There would be the thinnings?—Yes, from the twentieth to the fortieth years you might thin twice; at the twentieth and thirtieth years, and at the fortieth year you could fell, but you could not get much except in larch from your earlier thinnings. For your hard wood you would possibly have to wait one hundred years.

42124. Generally speaking, do you consider Ireland an insufficiently wooded country?—If you mean trees dotted about the country, I do not, except in certain portions. It is very much better than Spain or Italy. But from the point of view of woods it is the lowest in Europe, with one single exception.

42125. Contiguous woods?—Plantations in a fence. I think Portugal alone has a lower percentage under woodlands than any other country in Europe. Ireland has only 1·4 per cent.

42126. You pass a great number of trees coming from Limerick to Dublin?—Yes. It is ridiculous to say that Ireland is the most treeless country in Europe. It is not.

The Commission adjourned.

APPENDIX I.

C.—Statement showing condition of Labourers and their Holdings in Abbeyleix.

Labourer.	Number in Family.	Area.	Number of Apartments.	Landlord.	Remarks.
1.	8	8 perches,	2 small ones,	Viscount De Vesci,	Public sanitary arrangements put up by landlord.
2.	10	8 „	2 „	do.	
3.	4	8 „	2 „	do.	
4.	5 adults	8 „	2 „	do.	
5.	5	8 „	2 „	do.	
6.	5	8 „	2 „	do.	
7.	6	8 „	2 „	do.	
8.	6	8 „	2 „	do.	
9.	4 adults	Nil, no yard,	3 „	do.	
10.	4	Nil, a yard,	2 „	do.	
11.	5	Nil, a yard,	2 „	do.	
12.	4	Nil	2 small apartments, underground.	Daniel Cass,	All these are tenants in the same house formerly occupied by one family. There is no sanitary accommodation of any kind whatsoever, all nuisance must be carried through street door around to yard.
13.	2	Nil	1 apartment, underground.	do.	
14.	3	Nil	1 apartment, first floor.	do.	
15.	5	Nil	1 apartment, first floor also.	do.	
16.	2	Nil	1 apartment, second floor.	do.	
17.	1	Nil	second floor, 1 room.	do.	
18.	2	Nil	Two	do.	These tenements were the out-offices of the above house and was occupied by pigs, cows, horses, dogs, &c. All slops thrown in front of doors, and when the sun rises the stench is frightful in hot weather. There are pigs reared in yard.
19.	3	Nil	Two	do.	
20.	5 grown up boys and girls	Nil	Two	do.	
21.	2	Nil	Two	do.	The rooms are as follows in each case:—Living room 10 ft. by 10 ft. and 7 ft. to ceiling, the apartment is entered by a ladder "over kitchen," and from floor to wallplate 3 ft. 9 in. high, and a man 6 ft. high could not stand erect even in centre of room, people have died of consumption in this yard only 12 months ago.
22	2	Nil	Two	do.	
23.	5	Nil	Two	do.	
24.	5	Nil	Two	do.	
25.	13 grown up boys and girls	6 perches, garden.	4 small ones,	do.	No sanitary arrangements, even of the most primitive kind, and all slops have to be carried out by front door, usually after dark. These houses are in front of street.
26.	10 do.	Nil	3	do.	
27.	5	Nil	2 Herring man occupied this up to a week ago.	do.	
28.	3	6 perches	2	do.	
29.	5	Nil	2	do.	All in back yard of above houses.
30.	4	Nil	—	do.	
31.	5	Nil	—	do.	
32.	1	6 perches	1	Mr. Thos. Porter,	These three families are under same roof, yard common to all, no sanitary accommodation.
33.	5	Nil	1 over rafters room.	do.	
34.	3	6 perches	2	do.	
35.	1	Nil	1	Joseph Dobbs,	These two families are in a back yard, and the houses were fitted out of the offices; the house in front of street contains two families and the yard is common to both or all. No sanitary accommodation, very often a stagnant pool.
36.	1	Nil	1	do.	
37.	5	Nil	1	Jane Robinson,	And another idle house with one apartment. In same yard there are also two families living in houses using same yard; the houses faces the street.
38.	3	Nil	1	do.	
39.	2	Nil	1	Mr. C. M'Evoy.	
40.	5	Nil	1 underground	J. Crennan,	All nuisance has to be carried around street, "except new tenant that has no front entrance."
41.	2	Nil	1 upper floor	do.	
42.	1	Nil	1 middle floor	do.	
43.	3	Nil	2	do.,	No sanitary accommodation in yard.
44.	8	Nil	2 small rooms, one of these up a ladder.	John Mullen,	No sanitary accommodation.

D.—Condition of a Street in Abbeyleix.

The street of New Row in Abbeyleix contains twelve tenement houses, each house contains four apartments, two on the ground floor and two on first floor. Ten of these houses are occupied by two families in each; and two houses with two families only. One of these ground floors is used as an ass-house, and there are two empty half houses. Some slates are off, and the rendering in some places has fallen from the slates; the rafters were never lathed or plastered; the snow can get into the rooms; the lofts are in a terrible condition. There are no front doors to some of the houses and the jambs are rotted away, as are the doors; they are patched with bacon boxes, and some of them have only one hinge, and the walls, in some cases, never get even a coat of whitewash. 'Tis true that the landlord built some dry privies immediately at back-doors to every three houses, four privies in all, but as the yards are not enclosed, and as access was obtained through a lane that runs at the back they became a frightful nuisance, they had to be pulled down by the occupier in whose yard they were placed. When the drainage was connected with the main sewerage a small pipe was run the full length, with a primitive little trap. The whole affair got stopped in about one month and is there still in the same condition.

The windows are iron castings, permanent fixtures that cannot be opened, and the glass is broken in some of them; the light to room upstairs is admitted through what is known as a skylight, and the glass is broken in some of them. About the middle of this street dwells a fishmonger, which adds to the sanitation. The water that washes the clothes is thrown in the street channel and the channel is broken up in places.

The landlord is Mr. John Waldron, Solicitor. He lives himself in a place he gave the title of Rosebrook. What a contrast!

APPENDIX II.

STATISTICAL ABSTRACT—CO. CLARE.

A.—PREFATORY NOTE.

Special statistics relating to County Clare have been prepared for the Commission by the Commissioner of aluation (see pp. 273–5) and the Registrar-General (see pp. 276–96), and certain returns have been furnished the request of the Commission by the Local Government Board and the Department of Agriculture and echnical Instruction. Other information about County Clare is available in different publications, *e.g.*, the ensus Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the states Commissioners, etc.

All this statistical information has been brought together in the following pages, added to, and collated; id explanatory notes have been added where required (*e.g.*, pp. 273, 276, 299, 312, and 319) with a view of rming a compact Statistical Abstract of the chief points of interest in County Clare, which may prove of sistance to the Commissioners during their sittings in County Clare, and subsequently be helpful to readers the evidence.

WALTER CALLAN, *Secretary.*

28*th May*, 1907.

—GENERAL STATISTICAL INFORMATION, TAKEN FROM THE CENSUS REPORT, 1901, COUNTY CLARE BOOK [CD. 1059-IV. 1902, pp. vii. and viii.]

The County of Clare covers an area of 852,389 statute acres, or 4·1 per cent. of the total area of the untry.

The number of persons in the County of Clare, according to the Census, was—in 1881, 143,502, in 1891, 26,244, and according to the recent Census, 112,334 (57,386 Males and 54,948 Females), or 11·02 per cent. ss than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 21,392, the average mber of persons in a family being thus 5·2; and the number of Inhabited Houses was 21,009, showing an erage of 5·3 persons to each house. In calculating these averages, the Special Inmates of Public Institu- ns have been omitted.

The following Statement shows, by County Districts, as constituted under the Local Government (Ireland) ct, 1898, the number of persons in 1891 and 1901: and the increase or decrease during the decade:—

COUNTY DISTRICTS.	Population.		Increase or Decrease between 1891 and 1901.		
	1891.	1901.	Increase.	Decrease.	Rate per cent.
Ennis Urban, . . .	5,460	5,093	—	367	6·7
Kilrush Urban, . . .	4,095	4,179	84	—	2·1
Ballyvaughan Rural, . .	4,387	3,920	—	467	10·6
Corrofin Rural, . . .	5,699	4,803	—	896	15·7
Ennis Rural, . . .	16,310	14,679	—	1,631	10·0
Ennistimon Rural, . .	20,108	18,069	—	2,039	10·1
Killadysert Rural, . . .	10,503	9,165	—	1,338	12·7
Kilrush Rural, . . .	27,329	24,555	—	2,774	10·2
Limerick No. 2 Rural, . .	8,943	7,592	—	1,351	15·1
Scarriff Rural, . . .	11,715	10,445	—	1,270	10·8
Tulla Rural, . . .	11,695	9,834	—	1,861	15·9
Total, . .	126,244	112,334	—	13,910	11·02

From the foregoing Statement it will be observed that there was an increase of 2·1 per cent. in Kilrush rban and a decrease in Ennis Urban and in each of the Rural Districts. The highest percentage of decrease ok place in Tulla Rural, viz., 15·9; and the lowest in Ennis Rural, viz., 10·0 per cent.

Towns having, in 1901, a population of 2,000 and upwards are classified as Civic Areas.

The County contains two such Areas, viz., Ennis and Kilrush Urban Districts. In 1891 the population of ese Areas amounted to 9,555; in 1901 it was 9,272, showing an increase of 283 persons, or 3·0 per cent.; the rural portions of the County the decrease was 11·7 per cent.

APPENDIX II

The following Statement shows the Educational status of the Inhabitants of the County of Clare in 1891 and 1901, in so far as relates to the degrees of elementary education relative to which inquiry was made on the Census Forms, the numbers on which the percentages are based being those for the County as constituted in the respective years :—

Degrees of Elementary Education.	Rate per cent. of Total Population.	
	1891.	1901.
Read and Write,	65·0	74·0
Read only,	7·7	4·5
Illiterate,	27·3	21·5
Total,	100·0	100·0

From the above it will be seen that whereas, according to the Returns of 1891, only 65·0 per cent. of the Inhabitants, at all ages, could "read and write," in 1901, 74·0 per cent. could do so; that the percentage of the population who could "read only" in 1891 was 7·7, and in 1901, 4·5; and that the percentage of the "illiterate" fell from 27·3 in 1891 to 21·5 in 1901.

In 1891, 19·2 per cent. of the inhabitants aged five years and upwards were illiterate (17·8 per cent. of the males, and 20·6 of the females); in 1901 the percentage was but 13·2 (12·6 of the males, and 13·8 of the females).

The number of children attending school in the County of Clare, according to the Census of 1891 (week ending 30th May, was 20,802, or 45·7 per cent. of persons aged 5 years and under 20 in the County as then constituted, in 1901 the number returned (for week ending 11th May), was 18,114, or 49·0 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Clare (as then constituted) returned as Sick, on the night of the Census, was 1,469, or one in every 85 of the population; in 1901 the number so returned was 1,102, or one in every 102 of the population; of the latter number 403 were at their own homes, and 699 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law System was 4,278, or one in every 29 of the population; of this number 1,662 were inmates of Workhouses, and 2,616 were in receipt of outdoor relief; in 1901 the number returned was 3,994, or one in every 28 of the population; 1,545 of these being in the Workhouses, and 2,449 on outdoor relief.

According to the returns of the Registrar-General, the number of marriages registered in the County of Clare during the ten years ending 31st March, 1901, was 4,039, equal to an average annual rate of 3·4 per 1,000 of the population. The number registered in the whole of Ireland during the same period affords an annual average rate of 4·8 per 1,000.

The number of Births registered in the County during the ten years was 24,716, affording an average annual rate of 20·7 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 18,547, being equal to an average annual rate of 15·5 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Clare, amounted to 18,031 (8,022 males and 10,009 females); the number for the decade ending 31st March, 1891, was 32,421; for that ending 31st March, 1881, 18,796; for that ending with March, 1871, 31,667; and for that ending with March, 1861, 50,033, making a total of 150,948 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per head of Population in the one Poor Law Union in the County of Clare containing a Congested District.

*This return is taken from a similar return for all Counties containing Congested Districts, which was prepared by the Congested Districts Board, and published in the Appendices to the First Report of the Commission, pp. 289, *et seq.*

2.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN COUNTY CLARE, AND OTHER PARTICULARS.

(*Specially prepared for the Commission.*)

EXPLANATORY NOTE.

This return (prepared by the Commissioner of Valuation) shows the total rateable valuation (1906), the ulation (1901), and the average valuation per head of population in each Electoral Division in Co. Clare :—

(1.) Where that average is under 30*s.*

(2.) Where that average is between 30*s.* and 50*s.*, but is brought below 30*s.* by the exclusion from the dividend (*i.e.* the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division, though scheduled as congested, does not come within either of the above classes.

The total number of electoral divisions in Clare is 155, of which 150 are rural and 5 urban. The total mber of electoral divisions comprised in this return is 18, all rural. Of these, 17 are not scheduled as gested and are distinguished by an asterisk. Though the average valuation of several electoral divisions Co. Clare was below 30*s.* in 1891, they were not scheduled because their total population did not form e-fifth of the population of the county. Under the Local Government Act of 1898 the boundaries of Co. lway were altered and the electoral division of Mountshannon (which being in Co. Galway in 1891 had en scheduled) was transferred to County Clare.

Of the 18 electoral divisions comprised in this return, 6 are not below 30*s.* in point of average valuation r head of population. Of these 6 divisions, 5 are not below 30*s.* normally, but are when the total valuation all ratings above £50 is excluded, and 1 is above 30*s.* even after these exclusions. The name of this vision (Mountshannon) is printed in italics.

APPENDIX II

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS IN COUNTY CLARE.

SPECIALLY *prepared for the Commission.*

EXPLANATORY NOTE.

The information contained in the Tables I. IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the First Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Clare six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Clare one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns where one man has several holdings in County Clare, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Clare), and may exclude land geographically belonging to the division itself. Thus the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

Do., Congested, ...																									

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28–35):—

In the County Clare 40 holdings, subject to judicial rents fixed or agreed to before the 14th August, 1896 (commonly called First Term Rents), amounting to £878 10*s.* 6*d.*, were sold at prices which came within the zones; the average number of years' purchase being 20.4; and the average percentage of reduction in the purchase annuity as compared with the rent being 33·7.

In Clare seven holdings, subject to a First Term Rent of £94 3*s.*, were sold at a price outside the zones; the number of years' purchase being 16·8, and the reduction 45·4 per cent., which is greater than the maximum zone reduction.

As regards holdings subject to rents fixed or agreed to since the 14th August, 1896 (commonly called Second Term Rents), 20, subject to a rental of £439, were sold in Clare at a price within the zones; the average number of years' purchase being 23·5, and the percentage of reduction being 23·6.

Two holdings, subject to a rental of £27 5*s.*, were sold at a price outside the zones for 19·8 years' purchase; the percentage of reduction being 35·6, *i.e.*, a greater percentage than the maximum second term zone reduction.

As regards non-judicial rent cases, 60 holdings in Clare, subject to a rental of £790, were sold for an average of 19·7 years' purchase, the average percentage of reduction being 35·9.

In Clare two holdings, subject to a rental of £10, were sold for £168, of which £128 was paid in cash by the purchaser, and £40 was advanced by the Irish Land Commission. Four "parcels" were sold in Clare under Section 2, sub-section (1).

H.—LOCAL TAXATION IN COUNTY CLARE.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the nancial years ending in 1881 and 1891 ; (2) County Cess in each Barony in the County in 1891 (there is no ficial information available as to County Cess in 1881) ; and (3) fuller details about the new Poor Rate for 1901 d 1905, but it must be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral ivisions and County Cess to Baronies. Now Union charges are levied over the whole Union, District charges Rural Districts, County charges on the County, separate charges on special areas, and the whole is compli- ted by the changes made in the rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under, here the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually alf. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st ugust, 1870. In these cases if the holding was valued at over £4 the tenant paid, but was entitled to educt from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under e County Cess was paid by the landlord.

Under the Act a Grant in Aid called the Agricultural Grant and amounting to £727,655 is made annually to e local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certified be taken to have been raised off agricultural land in what is known as the standard financial year. The alance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now ovided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to ffect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in neral, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord nd tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies eated after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to educt anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits om the Agricultural Grant.

-STATEMENT showing the Poor Rate in the £ made in the Electoral Divisions of the Unions which are included wholly or partly in County Clare, for the Financial Years ended 1881 and 1891.

(a) The enumeration of emigrants from Irish shores did not begin until this date.

APPENDIX II

N.—STATE-AIDED EMIGRATION.

It may be as well to explain that under 12 and 13 Vic., cap. 104, sec. 26, Boards of Guardians were empowered to apply parts of the rates and to borrow money "for the purpose of defraying, or assisting to defray, the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., cap. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. The grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., c. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by Section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following TABLE shows the total number of State-aided Emigrants from Clare in 1883 and in 1884, and the amount of Grant to each Union.

(*Supplied by the Local Government Board.*)

UNION.	EMIGRATION SEASON, 1883.			EMIGRATION SEASON, 1884.			Total.	Total Grant.
	Canada.	Australia.	United States.	Canada.	Australia.	United States.

r. O'Doherty,	Clonadrum, Miltown-Malbay.
. Power,	Querrin, Lisdeen Cross.
. Vaughan,	Ross, O'Brien's Bridge.
rs. Woods,	Durra, Ennis.

R.—NOTE ON MIGRATORY LABOURERS.

e special characteristics of the temporary migration of agricultural labourers from the congested districts, distinguish it from apparently similar movements of labour in other counties and from the ordinary ples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical act (see Appendix to Second Report of Commission, [Cd. 3319, 1907], pp. 314–5). The total number of rs (including females) who had temporarily migrated from Ireland, or who at the time of the collection of gricultural Statistics in 1906 had expressed their intention of subsequently migrating, was 15,286. Of umber 1 was resident in Clare. He was the son of a landholder, who worked on his parents' farm when ne. The following Table, taken from the Annual Report of the Department of Agriculture on Irish tory Labourers for 1906 (pp. 34–5), gives further information on the subject :—

Law Union.	Number of Migratory Agricultural Labourers not Landholders.	Number of Migratory Agricultural Labourers having Land, and Area of their Holdings.												Total Number of Migratory Agricultural Labourers.	Where Employed.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns.

APPENDIX III.

DOCUMENT put in by The O'CONOR DON in connection with the evidence given by him before the Commission.

NOTES of EVIDENCE.

I am His Majesty's Lieutenant for County Roscommon. Although I have practised for some years at the English Bar I have had considerable experience in matters connected with the West of Ireland. I have for practically the whole of my life spent a large amount of my time in the West. Every year I have spent at least some months there.

When I came of age my father made over to me a small property, and on his death last June I succeeded to his estates, and for many years previously I knew of all his dealings with his tenants, and have seen all the changes in land matters in my district, which includes part of a scheduled congested area.

I propose to deal with the matters before this Commission under a number of headings, which are, as far as possible, arranged in the order of the terms of reference.

AREA OF CONGESTION.

It appears to me that the definition in the 1891 Act does not coincide with the poverty-stricken districts which are intended to be dealt with.

In one sense the statutory area is much too large, and yet it excludes districts which are as poor, or even poorer.

The statutory definition is based solely on the poor law valuation and does not take into account means of earning a livelihood other than agriculture. For instance, the districts of Rathlacken, Creeragh, Belderg, Inver, Pullathomas, and Doohooma are all scheduled, regardless of the fact that agriculture is not the chief source of livelihood.

On the other hand, there may be very congested and poor townlands which are not scheduled at all if they happen to be in the same electoral division with other rich and sparsely populated ones.

The definition in the Irish Land Act, 1903, of congested estates is also defective, as it largely depends on how much mountain or bog happens to be on the estate and takes no heed of the real poverty or condition of the inhabitants.

As an example of both the above definitions I refer to the electoral division of Cloonfower, which includes a portion of my Clonalis Estate, which I have just sold to the Estates Commissioners. A great part of the electoral division of Cloonfower is in no sense congested, and yet the whole is scheduled. Again, the Clonalis Estate is not a congested estate under the 1903 Act, although there are portions, particularly the townland of Cloonbonniff, which are very congested.

A very large portion of the scheduled areas in North Mayo are not congested in the sense that the inhabitants are poor and want State assistance either in the way of enlarging their holdings or otherwise.

If it is decided to retain the system of scheduling districts I would suggest that the better unit to take would be the townland, rather than the electoral division, and that in dealing with the matter other sources of income, such as fishing, possibility of remuneration, employment, etc., should be taken into consideration. An official inspection should be made by a competent person, who should confidentially report to whatever authority is entrusted with the power of declaring or scheduling a district, and such authority should at all times have the right to include townlands in the schedule, and also to remove them from it.

NATURE OF THE DISTRICT.

A totally different state of affairs exists between one truly congested district and another. A remedy that would be useful in one would be impossible in another.

In the sea-board area near Roundstone, Kilkieran, Lettermore, Gorumna, Carraroe, etc., the position is totally different to that, say, around Swinford, or even to that in North Mayo, near Rathlacken, Belderg, Inver, and Pullathomas.

The sea is the real source of livelihood to the sea board population in West and South-West Galway and it would be hopeless to try migrating them to inland grass lands. They would not know how to use them, and their last state would be worse than the first; moreover, no considerable proportion of the population would agree to go if they were required to surrender their existing holdings.

REMEDIES.

(*a.*) *Maritime districts in South-West Galway.*—This is probably the worst district in Ireland. Everything possible should be done to increase the earning power of the population; they seem industrious and hard-working, and as long as the potato crop is good they do not complain much. Attempts by interchange of seed should be made to avoid the failure of the crop; facilities for and instruction in spraying should be provided, and the people should be taught by local resident instructors to use their land to the best advantage. It is hopeless to expect any real improvement in this district from migration, and any industries there existing, such as the turf industry, fishing, etc., should be encouraged (*e.g.*, second pier at Costello), and the people rendered as little dependent as possible on the potato crop.

(*b.*) *Maritime districts in North Mayo.*—Rathlacken, Belderg, Inver, etc., to Belmullet. In these districts, although there may be a number of very poor people, still, taken as a whole, the population is comparatively comfortable. Their houses are fairly good, and there is no evidence of the extreme poverty that exists in South-West Galway. There is, moreover, particularly round or near Kilcummin and Killala, a quantity of grass land which could, I believe, be obtained at a fair price without compulsion for the enlargement of holdings. The population is, however, accustomed to obtain its living largely from fishing, and although it might be desirable to somewhat increase the holdings, I do not think it would be at all wise to so increase them as to render agriculture their main source of income.

(*c.*) *Districts in Mayo south of Belmullet.*—These districts such as Doohooma, Geesalia, etc., are, no doubt, poor, the land is bad, and there is not much of it capable of cultivation, but what there is of it consists chiefly of land capable of improvement by drainage and otherwise. The population is a sea-supported one, and there is no other land in the immediate vicinity available for enlargement. Improvement of the fishing, assistance in draining and improving the methods of cultivating the lands, and the exchange of seed potatoes are suggested as remedies.

(*d.*) *Inland Districts.*—In some of these which border on grass lands the enlargement of holdings, rather than migration, might be useful, but everything possible should be done to encourage all local industries. Foxford is an instance of what can be done in a comparatively short time without any heroic methods of migration.

(*e.*) *Generally.*—The Congested Districts Board has proved itself the most efficient body for dealing with the question, and if scheduled areas are retained as a basis, the purchase of all lands in the district scheduled should be in their hands, they should have power to buy grass lands outside these districts, and the Estates Commissioners should not in any way interfere with their

tions and should merely be used for the purpose ancing and carrying through (title, etc.) their ases and sales.

income of the Congested Districts Board should gely increased so as to enable them to give more ance to the very poor districts, either for build- piers, providing boats, making roads, drains, subsidising any industries that may require it, e useful, &c., &c.

ir work through the Parish Committees should couraged and enlarged. In most places where a h Committee is at work a great improvement in ndition of the people is visible, but so far these h Committees have not done much towards ing and improving the lands as the means at disposal were insufficient for this purpose. Such might usefully be done by them, but strict vision would be necessary, and any committee l to be wasting its funds should at once have cut off.

congested areas the work of the Agricultural De- nent should be left to the Congested Districts l. The latter body seem to have succeeded better ie poor districts. The Department formulates es for whole counties which are not suitable for ery poor districts. Moreover, the Department instruction chiefly by lectures, whereas the Con- l Districts Board go direct to the poor man, and t require him to go to them.

lo not wish in any way to suggest that the De- nent is not doing very useful work. I merely to point out that, in my opinion, it is not so adapted as the Congested Districts Board to ing on its work in the very poor and congested

Migration and Enlargement of Holdings.

ave not so far dealt specifically with this, which obably the most important question before the nission.

lo not think this remedy can be regarded as a lete solution of the problem. If it were possible ry it out in the wholesale way proposed by Mr. ane and others it would probably lead to com- ruin in many districts. He advocates cutting lmost all the grass land in the country, and ing it into comparatively small tillage or mixed . This would almost necessarily put an end to arket for hay and other similar farm produce; st of transit, even at low rates, would prohibit eing transported any great distance, and the farmer would of necessity be bound to have it med on his own farm. This, no doubt, is con- ated, but the difficulty arises that the small r would probably not have stock to consume it. uld never pay him to keep his stock a sufficient and even if he were able to do so, the stock to near maturity on the small farms contem- l must always be of an inferior quality. The attle require a large tract, and the consequent e of pastures. Moreover, even now the cost of ng them on large farms is not extravagant, and st of keeping them on small farms would be nsely greater.

egard the in-feeding of cattle as out of the on for the small farmer. It necessitates the use of cake and artificial foodstuffs. Even the farmers, with plenty of capital, have found t does not pay, and have given it up. It has largely tried at my Clonalis home farm, but ut success. I doubt that those who recommend including Mr. Doran, have had any experience except theoretical.

wever, this complete transformation of the ry into small farms is not a practical question gration on a wholesale scale would be impossible ry out. The people would not move. No when a Commission or Inspector goes round will say they will go, but when it comes to the of moving the position is very different, *e.g.*, lonalis Estate. A large body of tenants said wanted new holdings and would migrate. The s Commissioners insisted on getting land at agare for them. Eventually, with a trivial ex- n, not one would move, and as the Estates Com- ners find they can buy more grass land than re able to dispose of to migrants they have not 185 acres offered to them at their own valua-

The enlargement of holdings can, I believe, where grass land adjoins small, poor holdings, be carried out advantageously, and, provided proper steps are taken to ensure that proper use is made of the grass land so added, such enlargement would be beneficial. Great precautions should be taken against sub-division and against constant meadowing, and unless this is done the added land will be ruined. It is quite impossible absolutely to prevent sub-division; it can be kept in check, but the present powers of the Land Commission are wholly inadequate for the purpose, and the idea of rate collectors informing about it is ridiculous. The enlargement of holdings was tried on a very small scale by my late father, in 1870, in Cloonsuck. He then cut up a portion of a grass farm and added it to a number of adjoining small holdings. It has, on the whole, worked well, but though everything possible was done to prevent sub-division still such took place and has been now sanctioned by the Estates Commissioners. The added land has, of course, been kept in grass by the tenants, as no doubt will be the case nearly everywhere.

On what was till recently my Belanagare Estate a large quantity of grass land was last May cut up among the tenants, and this year most of it was used by them for meadow, and unless the constant meadowing is prevented the land will be ruined. One result of the cutting up of the grass lands on a large scale in the Belanagare district has been to reduce the price of hay, there being no buyers. I have this year (largely to help tenants) bought hay at £1 per ton, whereas formerly the price used to be double this. If all the grass lands were cut up there would be no market at all.

The powers of the Congested Districts Board and of the Estates Commissioners as to supervision of the use of added land and of new holdings should be largely increased.

Again, where migration takes place, the new occupier should be supplied with ample capital. Up to the present this has not been done. He has generally been transplanted with little or no capital, and with very little knowledge of how to use his new farm. He will naturally use it as a small grass farm, with only sufficient tillage to provide for his family wants.

A large portion of the Roscommon grass farms are unsuited for tillage. They are cold and sticky on limestone, but are good for grass. The only tillage crops that are grown to any extent in Roscommon are oats and potatoes. The grass lands are bad for both of these.

Again the difficulty of turf and water is almost insuperable. It has already caused enormous trouble.

Another objection to migration on a wholesale scale is that the people of the district, even when their own holdings are not very small, greatly resent the introduction of strangers, and great friction will arise if they are brought in. The idea of giving everyone as much as they want is, of course, absurd. In Roscommon the people naturally say that Roscommon men should get any land that is to be divided. My sympathies are with them.

Supply of Grass Land.

There are at present thousands of acres of grass land available in Galway, Mayo, and Roscommon, if a fair price is paid. I know myself many cases where the land can be obtained, and no stronger proof of the supply being greater than the demand exists than that the Commissioners had to give back to me 185 acres which they had agreed to buy and were getting at their own valuation. This land is still available.

No doubt migration and the enlargement of holdings to a reasonable extent can be carried out, and will help to relieve congestion, but more money must be spent over it and in starting the new occupiers than has yet been done.

To my mind one of the most useful ways of helping small tenants in a district where there is grass land near would be for the Congested Districts Board to buy the grass land and let the grazing to the tenants at low rates. The land is grazed much more economically in this way than if it is cut up into small plots. Even if migration on a very large scale is possible plenty of grass lands will still be available if a fair price is given and no great delays occur in carrying out a contract.

APPENDIX III.

Price.

It is clear from Mr. Doran's figures* that up to the present the Congested Districts Board have made remarkably good bargains. As long as they have the lands in hand they receive £25,000 a year as grazing receipts for land valued at £16,500 a year, for which they pay the Land Commission much less than they receive.

They do this even though they let the grazing at 30 per cent. less than the usual prices, and, as regards lands they farm themselves, owing to the magnitude of their operations, they cannot do so with the same care as regards buying stock as the ordinary grazier.

Their own figures prove conclusively that the land is worth more than they are giving for it.

Again, as to the possibility of a fall in value there is an equal chance of a rise. The importation of Canadian cattle would cut down the price of young stock and so injure the small man, but it would rather help the grazier with good land, as he could get his stock so much cheaper, and thereby the value of the grass land would increase.

At present there is no difficulty (when no boycotting) in getting grazier-tenants, and many graziers have been grazing the same lands for years.

Delay in Completing Sales.

This is one of the chief causes that prevents owners of both tenanted and untenanted land selling. If the vendor were guaranteed (provided he were not in default) 4 per cent. on his purchase money from a period of six months after lodgment of the originating request or application, there would be hundreds of owners willing to sell who now are afraid of the delay.

It has been said that the delay is largely caused by the vendors or their solicitors. This is absurd, as it is obvious that vendors and their solicitors would not delay so much more (if at all) in sales to the Commission as compared with sales to ordinary purchasers, and yet in the latter case a month to six weeks is a usual period to insert in the conditions of sale for the proving of title and completion. I can quote instances.

Compulsion.

This is quite unnecessary as any quantity of grass lands can be bought without it if a fair price be given, and, above all, delay in completion be avoided.

Some of the witnesses when dealing with the question of price say the graziers are in a bad way and are gradually getting into difficulties. If this is so it is obviously the better course to wait, so as to get the land cheaper.

Mr. Doran argues that if lands are not got now they never can be, as they are being sold and there are many anxious to buy. This does not look as if grazing was a failing business. If they are being sold too dearly the graziers will not be able to make them pay, and they will again come into the market cheap. If they are being sold too low the Congested Districts Board can offer more and buy. He admits an enormous quantity of grazing land is on the market.

Again, if compulsion is to be used and the grazier evicted, it can be done just as well after he has bought as now.

The demand for powers of compulsory purchase has arisen because landlords regard many of the prices hitherto offered as inadequate and unfair. If fair prices were given there would be no grounds for proposing compulsion. My idea of a fair price would be as follows, and I believe that on such terms all la required could be obtained without compulsion.

The annual value of the required untenanted la should, unless the owner elects to prove the contrar be taken to be one and a third times the poor la valuation, *i.e.*, the normal standard for income ta The double interest of owner and occupier would th be provided for. But as in many cases the p law valuation is largely under the net annual come the owner should have the option of provi by means of his books or otherwise, on sworn e dence, before a judicial tribunal, the actual net ceipts, and where he exercised this option the receipts so proved should be treated as the annu value.

The vendor should then get such capital sum would yield him as income the net value thus asc tained.

The objection to taking in all cases the net ceipts is that, where a man farms his own lands, is often impossible to ascertain exactly what are t net receipts. The lands required may be farm jointly with other lands, and it may be impossible allocate the profits. Again, a great many reside owners, largely for the purpose of giving employme employ more labour than is necessary, and there reduce the profits. It would be unfair to penali them. This has been done on the Clonalis Estate f many years, and the farming profits on it are cons quently small, but the labour bill comes to over £1,0 a year.

Mr. Doran's evidence,* moreover, shows co clusively that the true value of the grass lands largely in excess of the *prima facie* standard whi I suggest above, and consequently the owner shou have the option of proving the actual profits where is able to do so.

The standard above suggested for arriving at t fair price of untenanted lands would do away wi the great uncertainty that now prevails when t price is left to be fixed by valuers, who diff enormously in their views. The uncertainty of t results of such valuations could not be better illu trated than by the correspondence which has a peared in *The Times* for many months past as to t extraordinary discrepancies in the valuations of ev the most eminent professional valuers in England.

Landlords.

Before concluding I would like to say one w about landlords of the West. It has been alleged th they did nothing for their tenants. I repudiate th

On the Clonalis Estate, for many years past, m than the whole rental of the estate has been sp annually in labour there.

In 1880 or thereabouts my father spent over £4,(in relief of distress works on the property, chiefly tenants' holdings. When seed potatoes were nec sary he has often given them out free to his tena under £5 valuation, and I am doing so this year. constantly gave his tenants timber, etc., for th houses, building bridges, etc., and although I h sold the property I am continuing this pract Another practice that greatly assisted the tenants to allow them to pay the rent by feeding one or m head of young cattle. Although I have sold the p perty I had a number of applications for cattle order to pay the Land Commission rent. I sent cattle to the poorest, although it is not a very pay way of feeding them.

I believe there are many landlords who have sisted their tenants in similar ways.

To summarise the whole situation, I say give Congested Districts Board ample funds and powers of regulating holdings and carrying out dra age works, a proper staff, and ensure quick p ments of purchase money to vendors, and they be able to do a very great deal towards ameliorat the lot of the poor in the West of Ireland.

* See Appendix to First Report of the Commission [C.D. 3267, 1906], p. 50

APPENDIX IV.

ENT put in by Mr. J. L. PIGOT, in connection with the evidence given by him before the Commission.

randum on the working of the Irish Land Act, 1903, as bearing upon the question of the destruction of timber-trees and plantations, and the reservation to the State of surplus waste lands for forestry and other purposes of general public utility.

eservation to, and the management by, the State poses of forestry or in general interests of moor in and bog lands, not required for pasturage iculture in Ireland, is a necessity if the land economically utilised. Because—

There are immense tracts of such land.

The best, if not the only use to which much of aste" land can be applied is the production of or of minor forest products such as osiers for ing industry.

t is accepted, as the result of various govern- nd parliamentary Commissions of Inquiry, rests, properly managed under the conditions il and climate which obtain generally in Ire- re in themselves a sound financial investment, rom many economic advantages derivable from xistence. While, in the case of turf bogs of xtent, it is very doubtful whether reclamation iculture can be really economically effected State aid or intervention.

The State is generally the only proprietor who rd to incur the initial high cost of planting or tion on an extensive scale; who can afford to til the woods, etc., begin to yield interest on ital invested; and who, above all, perhaps, position to secure that continuity in the system gement which, in the case of forestry at least, dition essential to success.

considerations have, no doubt, all along ap- But, concurrently with the operation of the urchase Acts, and especially in connection with ing of the Act of 1903, the question has become immediate interest and importance. If ex- tracts of waste land are to be acquired for ation, fairly free from adverse rights and at nable cost, it is almost a case of "now or

For once allow such land to be transferred rge owners to numerous small peasant pro- with divergent interests, the difficulty of sufficiently large and conveniently situated f arranging, commuting, or transferring rights urage and passage, will be enormously in- apart altogether from the increased price in such circumstances, would probably have to for the land.

d was formerly well-wooded and noted for the ce of its timber supplies. In comparison with mber-producing countries, such as Russia and , it is very favourably circumstanced for the of economic forestry. Potentially one of the mber-growing counties it now is, with the ex- of Portugal, the least-wooded of Europe.* nd Act of 1903 has aggravated the position. merely has the working of the Act led directly apid, reckless and improvident felling of trees, the permanent destruction of woodland crops out the country, but the very existence of n present conditions interferes with and retards nsfer of tenanted or untenanted (grass) lands rom the woods included in residential demesnes tlying woods of considerable extent which without undue cost, be preserved by vendors rting or other purposes, many of the lands planted are so small in area or so situated ey could not be effectually protected from still less preserved for game, once the sur- g tenanted or grass lands are sold. A wood of s may be on rough mountain land, or on or partly drained bog, and might with ad- to the neighbourhood or to the country as a e preserved or added to, were there any person lic body directly interested in safeguarding it. ence has already shown that, in the case of purchased by the Land Commission under Section 6 of the Act, the increased value of the estate after re-arrangement of the holdings and the sub-division of untenanted lands may allow of woods of this kind (originally, perhaps, cheaply purchased) being re-sold at a low figure or retained by the Nation almost free of cost on the purchase-account. Possibly, on the other hand, such a wood ought properly to disappear, having regard to its prospective value or to the superior requirements of agriculture in the vicinity. There is, however, nobody, no agency or State department to decide or to advise with authority. The wood, being an incubus to the vendor who can find no purchaser save a timber merchant, consequently disappears, often while the trees are still immature. The draining of the soil and the planting may have been paid for by a loan from public funds. I learned of one case where, a dispute having occurred between the vendor and his tenants (who had signed purchase-agreements) regarding the rights to the timber, vendor and tenants in competition removed and sold all the available trees with the utmost despatch.

Once the fee-simple of the land is vested in a tenant-purchaser, the latter has full right to fell and sell timber growing on the land, unless, in so doing, he lowers unduly the value of the land as security for the purchase money advanced. Yet, even if the Land Commission has the right to intervene it lacks the power to prevent. Consequently, trees on purchased holdings are being felled at an increasingly rapid rate, and often in sheer ignorance of the real value of the timber for purposes of shelter, construction, etc.

The presence of outlying, scattered woods may, *so long as the trees remain unfelled*, prevent a landlord from selling his estate to the Land Commission, which, while empowered to hold woodlands temporarily, has no means of managing or even of protecting them for the time being. Cases have arisen where the Land Commission, after purchasing an estate for re-sale, has found the existing woods a source of embarrassment.

If this be so while estates are, in the main, sold under arrangements made directly between vendor and tenantry, in what manner may a large increase of sales to the Land Commission be expected to affect the question? If compulsory sale should be sanctioned by law I assume that practically *all* the untenanted land of poor quality in each estate affected must be purchased, not merely such land as might immediately serve for the enlargement of holdings or in schemes of migration.

While the difficulty of dealing with existing woods or plantations would be increased proportionally to the greater wooded area purchased by the Land Commission, the means for acquiring extensive tracts of mountain and heath land, suited to planting, would be immensely facilitated owing to the opportunities afforded by the re-arrangement of the estates prior to re-sale to the tenants. No such opportunities on so great a scale are ever likely to recur. Neglect to take advantage of, or at least to study them with a view to the creation of national forest estates may be considered in connection with the report of the Departmental (Board of Agriculture) Committee, appointed in 1902, on British forestry. That report brought out that "The great area of waste lands in "these islands, which might be afforested and with "regard to which such valuable evidence has been led, "thus becomes a matter of grave national concern."

The land which might become available for tree-planting on an extensive scale may, perhaps, be conveniently classed as under:—

(*a*) Mountain and heath land.
(*b*) Turf bogs.

* Wooded area in Ireland 1·5 per cent., British Isles 4 per cent., France 12 per cent, Germany 33 per cent.

APPENDIX IV.

(c) Narrow ravines, steep slopes, and rocky or poor land in sub-montane or low-lying districts generally.

The mountain and heath lands, comprising in all some 2¼ million acres, are the tracts naturally best-suited to economic forestry. Draining, before planting, is usually unnecessary or inexpensive; fencing and general protection may be economically arranged for wherever blocks of land sufficiently large and with suitable boundaries can be secured; while conditions as to soil and climate are certainly not less favourable than in other European countries where forestry for very many years has been successfully practised on similar lands. The slopes of ravines, and also rocky land, are often eminently suited to profitable tree-planting. There is no reason to doubt that mountain land in Ireland at one time comprised vast tracts of natural forest, whose restoration would greatly improve the natural drainage of the whole country. Whatever measure of fact may underlie the various theories as to the origin of the bogs in Ireland, it will scarcely be questioned that the destruction of the forests in historic times, and especially the denudation of the hillsides and ravines, must have aggravated the condition of the bogs and of low-lying lands, and that re-afforestation could not fail in inducing a contrary effect and in improving generally the arterial drainage of the country.

The total area of turf bog is returned at about 1,100,000 acres,* of which (according to a statement prepared in the office of the Estates Commissioners) only 390,000 acres are untenanted. Of the total area, about 6/7ths are, according to the Report of the Bog Commissioners, 1814, comprised between two straight lines drawn from Howth Head to Sligo, and from Wicklow Head to Galway. Large areas of turf bog might, no doubt, be made available for planting. But planting on a bog deeper than three or four feet is generally hazardous culturally and unprofitable financially. Timber of good quality, but usually of the cheaper kinds can, no doubt, be grown on deep bog which has been drained and to some extent gravelled or otherwise manured. Yet in bog land generally, the acidity and inertness of the bog substance and the absence of mineral nutriments must be overcome before plants which strike deep into the soil can thrive. The draining and manuring necessary to secure this condition entail, in forestry, an original capital debt so heavy that financial profit can usually not be expected. But I think the weightiest argument against any attempt to afforest on a large scale Irish turf bogs is that these latter, unlike high mountain and moor lands, may possibly hereafter be profitably reclaimed for pasture and field crops. The Bog Commissioners stated (3rd Report, 1814), in connection with improvements undertaken on the Dillon and French Estates, that "the red bogs may all be reduced "to tracts of profitable pasture and meadow, and in "many cases may be applied to the produce of oats "and potatoes, if gravel can be had from the under "strata, as at Aughalour." In their final report (1814) the Commissioners said: —

"From all the above data we can confidently pro-"nounce that the extent of Peat Soil in Ireland ex-"ceeds two millions eight hundred and thirty thou-"sand English acres, of which we have shown at least "1,576,000 to consist of flat red bog, all of which, "according to the opinions above detailed, might be "converted to the general purposes of agriculture; "the remaining 1,255,000 acres form the covering of "mountains, of which a very large proportion might "be improved at a small expense, for pasture, or "still more beneficially applied to the purposes of "plantation: we wish, indeed, it were possible for "our Reports to fix the attention of their proprietors "upon this subject, so connected with the interests of "the British Empire."

At that time the wonderful results obtained cheaply in improving waste land (as in Luxembourg and Holland) by the use of lupins and artificial manures, such as kainit and basic slag, were unknown. With intensive cultivation and quick returns an capital outlay the turf bogs may hereafter pay well in agriculture where success in forestry must at best be doubtful or mediocre. With extensive mountain tracts, then, naturally adapted to forest culture, I would rule out as unsuited to tree-planting all bogs of large extent or more than a few feet deep.

It seems impossible to forecast, with any approach to accuracy, what total area of mountain or moor land might be acquired for forestry purposes. The agricultural returns afford no precise indications. Thus, of the 2¼ million acres of "barren mountain land" in Ireland, it appears that (excluding mountain as may be included in "demesnes") 354,000 acres are untenanted. In addition, there 286,000 acres of untenanted land, with a Poor valuation ranging up to 2s. 6d. per acre, some or of which is probably mountain pasture. I thin unreasonable to suppose that waste land for fo purposes should be sought for only amongst t 640,000 acres of untenanted land. Land of this may be tenanted one year and untenanted the nex

The Poor Law valuation indicates to some ex the present utility of these tracts. The valuatio the entire area of 354,000 acres of untenanted m tain is, on the average, 5¼d. per acre; that o 286,000 acres valued up to 2s. 6d. is, all round, 8½d. an acre. In evidence which applied t West generally, from West Cork to Donegal, g before the Select Committee on Forestry, 1887, it stated that immense areas could be acquired for a 10s. an acre, and that the people—in Connemar least—would cheerfully acquiesce in reservation forestry purposes on account of the betterment their holdings and the provision of forest pro which tree-planting would secure. The result of own inquiries certainly does not accord with evidence. Yet there are two outstanding proposit in point. First, that the real value of much of land to the peasantry must often be very sm and compensation for disturbance, if paid in c would be correspondingly low. And, secondly, many people may be expected to relinquish willi their poor rights, enabling them to pasture a animals over large tracts, in exchange for a much smaller area of good land near to their ho steads. Compulsory sale, the division of untena pasture lands, and the re-arrangement of hold would give opportunities of effecting such exchar It does not appear unreasonable to assume tracts of suitable waste land, much in excess of area which it would be practicable to plant wit say, fifty years, might be acquired at a low cost acre. There are at present, according to the cultural returns, 301,000 acres of woods and pla tions, of which 95,000 acres are classed as untenan the balance (206,000 acres) being presumably cluded for the most part in demesne land. As ing that all these woods ought to be perman maintained—a very improbable contingency—that it were desired to increase the area-percentag forested land in Ireland to the figure for the U Kingdom (4 per cent.), the present total wooded should be increased from 301,000 to 773,000 a Apart from mountain and bog, there are, as r above, some 286,000 acres of untenanted land, suited for the enlargement of uneconomic hold of which the total valuation is only £10,135. whole of this might possibly be acquired for a pay of from £100,000 to £200,000. In countries suc Germany, or even in small States like Belg where the value of forests in rural and nati economy is well understood by those in auth who are supported by informed public opinion, op tunities such of these of adding to the national f wealth would not be lightly disregarded.

The probability seems to be that more land could in reason be utilised in forestry migh secured on easy terms. Thus in poor estates in West, where the sporting rights may bring in half or more of the total rental, a proprietor n eagerly embrace any opportunity of parting mountain, provided he retained the sporting r which in many cases are much enhanced in valu a result of planting. The acquisition of blocks of land is desirable in connection economical forest management, and this object n be seriously interfered with were it possible to only with the mountain waste included in one several disconnected estates in the same neighb hood. Yet, while large tracts seem generally c able for forestry, I think it would, for va reasons, be well to commence any great scheme planting with smaller areas, say, of about 500 a situated not far from villages or supplies of lab

The Select Committee of the House of Com on Forestry reported (1887), amongst other ma that strong evidence had been given before them large tracts of land, especially in Scotland and land, might be planted with advantage. The mittee referred to the considerable social economic advantages which, apart from any mediate pecuniary benefits, would accrue fro

*Exclusive of 398,000 acres of marsh, as well as, presumably, of all shallow bog on "barren mountain land.

ive system of planting, especially on the West f Ireland, and dwelt upon the importance of lanting as an accessory to agriculture. The mental Committee, appointed by the Board of ulture in 1902 to report upon British forestry, ot specially extend its inquiries to Ireland. It ed that, on the highest authority, there is in nited Kingdom a very large area of waste, r and rough pasture, or land out of cultiva- amounting in all to 21,000,000 acres on a proportion of which forestry could be profitably taken; that, even with indifferent management, nt returns had often been obtained from plan- s formed on land of little or no value for any purpose; that the possibilities of forestry as ns of furnishing remunerative labour to an in- l rural population are great; and that the r utilisation of waste lands had become a matter ve national concern. At that time the present disintegration of landed interests in Ireland ot commenced, and the Committee did "not ustified in urging the Government to embark vith upon any general scheme of State forests present circumstances." The general import- of the question has since been further recognised gular grants from the Treasury for aiding in- ion in forestry.

h the exception of a few woods vested in the tment of Agriculture, Section 4 of the Land of 1903 has proved inoperative in preserving and plantations or in the setting apart of for planting. In 1904 that Department repre- l to the Estates Commissioners that it had pre- y been debarred from exercising its functions e matter of forestry because suitable land was t entirely in private hands, but that the Act 03 had fundamentally changed the conditions. igements were accordingly made whereby the tment should be given the option of purchasing voods or lands suited to planting offered for sale e Commissioners. But nothing was done owing, lack of opportunity to acquire suitable lands, want of funds, and also, perhaps, to the fact the Department is unprovided with any proper agency for dealing with the forestry question. Under the Agricultural and Technical Instruction Act of 1899, County Councils are empowered to strike a rate for forestry purposes, but only a few of the counties appear to have moved in the matter. In this case also funds were wanting, apart from other difficulties, and practically nothing has been done. In November, 1905, the Department of Agriculture drew the attention of County Committees of Agriculture to "the present wholesale destruction of timber trees in many districts of Ireland, where trees are being cut down without regard to their present usefulness for shelter or ornament, or to their value as timber when felled"; and the Committees were invited to co-operate in "arresting the general policy of destruction," and to encourage tree-planting. Such circulars can be of little avail. The evil cannot be treated by posting up warning notices at the constabulary barracks.

Section 4 of the Act of 1903 presumably aimed at the reservation, for management in public or general interests, of portions of estates which can be more economically utilised for forestry and other purposes named than by being sold to individuals. In this aim, so far as forestry is concerned, not merely has the Act signally failed—it has operated in the directly contrary direction. The actions of vendors, tenant purchasers, and of the Land Commission all tend to destroy or lessen the timber resources, already so inadequate, of the country. On the other hand, the administrative department, expressly constituted by the legislature to deal with the subject, practically acknowledges its impotence to remedy the evils which it deplores, or to profit by the openings given by the Land Act.

The western counties offer the greatest scope both for the protection of existing woodlands and for the reservation to the State of lands for afforestation. The following tabular statement compares the areas of wood, bog, mountain, and of untenanted land valued at 2*s.* 6*d.* an acre or less, for each of the administrative counties comprising congested electoral divisions, with the corresponding areas for the whole of Ireland:—

County.	Total Area.			Untenanted.

ese counties contain nearly one-third of the total ed area in Ireland, and of "mountain" about er cent. of the area classed as such; while they le over 80 per cent. of the untenanted land valued ot more than 2*s.* 6*d.*

suming that a scheme of compulsory purchase, as that proposed to the Commission* were ed, the State would become the proprietor ractically all the waste lands in these dis- No re-arrangement of agricultural hold- could possibly deal finally with all these lands; on the other hand, until the holdings were in e of re-arrangement it would be impossible to say ly what lands are or are not "waste," or e and how much of the waste is best suited to able tree-planting. All that seems possible to is that, in the course of such a scheme of purchase, the agency responsible for distributing the lands will find itself compelled to set apart extensive tracts of waste moor and mountain, and that the lands so set apart will ultimately prove more or less suited to economic forestry according as timely measures are taken, while the general land-settlement of the country is still in progress, to inspect and classify them, and to arrange suitable boundaries as well as the rights of user to which they must remain subject. Very possibly larger areas might be set apart than the State itself could reasonably expect ever to plant up. That would be, I think, no reason why the State should not temporarily hold excess waste lands for subsequent disposal.

The permanent conservancy of existing woods and the afforestation of waste lands on a large scale in the congested district counties would seem to involve something more than the "improvement" of estates purchased by the Land Commission, as contemplated

*See Appendix to the Third Report of the Commission [Cd. 3114, 1907], p. 119, q. 15632.

APPENDIX IV.

by the Act of 1903. But forestry, according to the Commissions of Inquiry on the subject, would improve generally the condition of the West, and was within the purview of the work of the Congested Districts Board. The agency administering compulsory purchase in the congested districts could, no doubt, if properly equipped, undertake new planting and manage existing woods. But such an agency could only touch one side of the forest question in Ireland. It would not hinder the rapid and reckless destruction of timber in other parts of the country. In the case of direct sales of land, vendors are now constantly selling to tenants lands some of which are, economically, surplus lands for the tenants' purposes, and are thus perpetuating and increasing the difficulties in the way of properly utilising such lands. The obstacles at present in the way of preserving outlying woods, surrounded by newly-purchased tenanted lands, are not experienced in the West only. And in other parts there are extensive mountain tracts, some of which are known to be suited to planting, as in Tipperary (68,000 acres) and Tyrone (102,000 acres).

Again, any comprehensive scheme of State forestry must be permanent in its nature, and could only mature financially a century or two hence, when the problem of congestion will have been forgotten. From the financial standpoint, money carefully invested in forestry may offer as good security as (in the opinion of some it offers security better than) an investment secured on agricultural land. But it is quite certain that advances made by the State for purposes of economic forestry (*i.e.*, forestry so regulated as to give the highest possible nett return in money on the capital invested) could not be recovered with the certainty and regularity expected in the case of Irish land-purchase advances.

The cost of forestry operations embraces capital and maintenance charges. The former include the cost of the land (a very important item), draining (if needed), fencing and planting. These charges, as well as the question of profit, vary so greatly according to the locality, situation and extent of the land, quality of the soil, kind of trees planted, labour facilities, &c., that no all-round rates or estimates can be relied upon. The leading British authority, Dr. Schlich, when reporting to the Congested Districts Board in 1895, estimated the cost as follows per acre for planting in Galway:—

Draining,	£1 10 0
Fencing,	£0 10 0
Planting,	£2 0 0
	£4 0 0

He subsequently estimated the cost of planting mountain and heath land per acre generally at rates ranging from £3 10*s.* 0*d.* for Spruce, to £6 0*s.* 0*d.* for Ash and Oak, and set the cost of fencing against shooting rents. Looking after the woods, as well as rates and taxes, he estimated at a total of 4*s.* an acre yearly. On these data he showed ("Forestry in the United Kingdom," Chap. 3) that, on mountain and heath land of average quality, valued at £2 an acre, money invested on planting would yield compound interest as follows:—

Larch planting,	5·1 per cent.
Ash,	4·5 per cent.
Scots pine,	3·8 per cent.
Spruce,	3·6 per cent.
Beech, oak,	3·2 per cent.

It has been calculated on a cautious basis that suitable land of average quality, bought for £2 an acre, and planted with (say) Scots' Pine, would yield nearly 4 per cent. compound interest on the original outlay. The first cost of planting is taken at £4, and the annual cost of maintenance at 4*s.* per acre. The total return in money would be collected somewhat as follows up to the eightieth year after planting, when the trees are assumed to become mature.

Scots Pine per acre.		
Thinnings at 30th year,	£0 10	0
Thinnings at 40th year,	2 10	0
Thinnings at 50th year,	7 0	0
Thinnings at 60th year,	9 10	0
Thinnings at 70th year,	11 10	0
Final felling, 80th year,	143 0	0
	£174 0	0

This estimate is based on the assumption t timber of large dimensions is required. But if would often be the case, the scheme of manag provided only for small timber, poles and pr (for which there is an inexhaustible demand) interest on the capital invested might well be siderably higher than four per cent. Thus larch to be grown on fairly good land, thinned at the 20th and 30th years after planting, and fi felled at the 40th, the investment might yield to ten per cent. on the capital outlay. Less val timber, like spruce and pine, similarly treated, reasonably be expected to yield five or six per Sir Herbert Maxwell, before the Society of A gave in detail his reasons for believing that mi pine and larch, properly grown on mountain pas land, which now lets at 2*s.* an acre, would brin annually, on the average, 37*s.* 6*d.* an acre. On other hand, with beech and oak, the interest capital would be lower, and the final return m not be obtainable before 100 or 150 years a planting.

The profit obtainable thus depends largely on kind and size of timber required, as well as on situation and quality of the land. Those who h studied the question are generally agreed that afforestation of waste lands can be easily defended financial grounds, provided sites for planting judiciously selected, and the management is throu out really economical. Subject to this limitat expenditure by the State on forestry would be in sense a grant but an advance recoverable with in rest. The period of loan, however, as well as rate of interest obtained, would necessarily vary, the nature of the forests and their treatment va from place to place. Until, therefore, the la were definitely selected, and plans of work sketc for each locality, it would be impracticable to fra a general estimate governing all cases.

Assuming that 250,000 acres of suitable land w to be acquired forthwith by the State, and set ap for afforestation, it is practically certain that major part of the area selected would remain planted for many years to come. The cost of m agement would lessen as the area planted annu or up-to-date was increased. But, assuming t the forest budget for expenditure (apart from cost of the land) were limited for the next twe years to £20,000 annually, the charges might, roughly, be apportioned as follows yearly:—

Administration and supervision of works,	£2,
New planting, 3,000 acres annually at £5 an acre,	£15.
Maintenance, repairs, protection, &c.,	£3.
	£20,

At that rate more than eighty years would necessary for afforesting the 250,000 acres set ap and more than 100 would elapse ere the plantati generally would be returning profit on the capi With double the expenditure the period of wait would be halved. The figures indicate that if State waits to acquire the land until the money planting is made available, it will probably ne secure the land or need the money for planting.

Having regard to the foregoing considerations think that a special Forestry Branch should be corporated with the Department of Agriculture Technical Industries. The Department would t over (and plant up as funds permitted) surp Crown waste lands previously ascertained to be s able for afforestation, as well as any plantati purchased under the Act (by the Estates Comm sioners or the Congested Districts Board) which ou to be permanently preserved. The Department sho also be in a position to purchase waste land or for woods direct from vendors of land. It would fur be charged with the management of Crown woods existing, as well as with such sylvicultural or ar cultural work as is now performed under var Government authorities. Amongst its more im tant duties would be the collection and diffusion useful information bearing upon tree-planting in lation to agriculture and the raising of stock, a done by the Forestry Bureau of the United St Government. The Department, in short, would with forestry as part of the general question of l settlement, with a view to improve agriculture

...lp industries by assisting in arboriculture on ... and by creating a national forest property.

With the exception of a very small quantity, ... of fancy and hard woods, Ireland might ... supply herself with all the timber she now ...orts or could consume but might export to Britain. ...es are rising and the sources of timber-supply ...dily lessening. Already the annual value of tim... ...ported into the United Kingdom approaches 30 ...lions sterling, of which sum nine-tenths, according ... experts, represents timber which might equally ... be grown at home. Evidence before the Forestry ...missions showed how industrial development would ...ow upon the afforestation of waste lands. The ...ir-making industry in Buckinghamshire owes its ...stence to, though it no longer depends solely upon ... local woods, and it supports tens of thousands of ...ple. Wood-pulp to the value of 2½ million pounds ...ling is annually imported into the United King... and, as a writer on the subject remarks, "Surely ... we can grow anything, we can grow timber fit for ...ood-pulp!"

...am not competent to deal with the financial ques...ns which would be involved in the carrying into ...t of the scheme of forest work outlined above. ...ds to a certain minimum amount should be ear...ked for new planting for instructional purposes. ...haps the Crown quit rents and the sums for which ...y are redeemed under the Land Act might be so ...ised. It is understood that practically the whole ...the large sums received as Quit Rents have been ...plied by the Commissioners of Woods and Forests ...the acquisition or development of Crown property ...England. The main duty of the Agricultural De...tment in regard to forestry would, as I conceive, ...to acquire suitable lands while it is still possible ...acquire them at all. The advantages claimed for ...ional forestry in Ireland can only be secured if ...ufficient area of suitable land is obtained fairly ...aply in advance. And further, if, as seems to be the case, very large tracts of suitable land may be secured very cheaply, money invested in their purchase must be the best possible investment at the present time in any large scheme of national-economic forestry.

I think the protection of isolated trees or of shelter-belt timber in holdings vested under the Land Purchase Acts should be rendered easier or possible by a change in the law. As affecting the security for the advance, or the real interest of the tenant-purchaser, or the amenities of country life generally, it seems deplorable to leave the door open for the present widespread destruction of hedgerow and other trees. But it may be noted that former laws, or the terms on which the tenantry were required to plant or to refrain from cutting timber trees, often operated very harshly. This is particularly so with Ash (a very common tree), whether isolated or planted in hedges, especially on tillage farms. This tree (though so valuable when grown in plantations) poisons the soil for pasture and tillage by its root-system, apart from the damage which may result from its shade. I would not lightly throw any obstacle in the way of the removal of such agricultural pests.

I have stated above that I would rule out as unsuited to profitable tree-planting all large or deep surplus turf bogs. Nevertheless, as for surplus mountain lands, I think that the State should temporarily hold surplus turf bogs of large extent which may come into its possession, and should retain them in conditions allowing of economical schemes of reclamation, resale, or utilisation hereafter. Fifty years hence compressed turf may be as valuable in Ireland for railway fuel as it now is in different parts of Germany. The fact that so little has been done in reclaiming turf bogs for agriculture or pasture during the past century is by itself no augury of the results of the next, or sufficient ground for argument that the schemes of the Bog Commissioners, prepared after such exhaustive inquiry in 1810-14, were visionary.

ROYAL COMMISSION ON CONGESTION IN IRELAND

LIST OF MEMBERS OF THE COMMISSION

The Right Hon. The Earl of Dudley, G.C.V.O. (Chairman)

The Right Hon Sir A. P. MacDonnell, G.C.S.I.

The Right Hon. Sir John C. R. Colomb, K.C.M.G.

The Right Hon. Sir Francis Mowatt, G.C.B.

The Most Rev. Patrick O'Donnell, D.D. Lord Bishop of Raphoe.

John Annan Bryce, Esq., M.P.

Walter Kavanagh, Esq., D.L.

Conor O'Kelly, Esq., M.P.

Angus Sutherland, Esq., Chairman of the Fishery Board for Scotland.

Secretary—

Walter Callan, Esq.

TERMS OF REFERENCE.

"To inquire into and report upon the operations of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas."

SUMMARY, ...	401

STATISTICS OF THE NUMBER, VALUATION, ACREAGE, AND POPULATION OF HOLDINGS IN IRELAND.

PREFATORY NOTE.

The information contained in the following tables has been specially prepared for the Commission by the Registrar General from the office summaries of the Census of 1901. As is well known, the Census Returns contain statistics relating to (1) the number of the various classes of holdings in each county in Ireland classified according to their valuation; (2) the total area occupied by each class of holdings; (3) the total valuation of each class of holdings; and (4) the total population living on each class of holdings. The original returns are collected according to townlands, and are combined in the Census Office into electoral divisions, thence into unions, and subsequently into counties. The information contained in the published Returns is shown by provinces, counties, and poor law unions, but not by electoral divisions, and as the latter is the unit of congestion, it is not possible to obtain from the Census Returns the information about the congested portions of a county which is available about the entire administrative county or poor law union. The Commission decided that it was important to have this information about the congested districts compiled from the manuscript summaries in the Census Office and published; and, as part of their inquiry has reference to the question of what areas (if any) outside the districts now scheduled as congested require to be dealt with as congested, and, as it was thought that the detailed information which would be obtainable from those statistics shown by electoral divisions, would throw some light upon the circumstances of the poorer non-scheduled districts and also upon the means available for the relief of congestion there, it was decided by the Commission that the statistics should be published for every electoral division in Ireland. This volume is the result.

Method of Arrangement.

The returns have been arranged in the following manner:—The provinces are taken in alphabetical order, and the counties within each province, the unions in each county, and the electoral divisions in each union are all arranged in the same order. Each county is complete in itself and has four tables relating to it. The first shows the total number of holdings, and the number of holdings which do not exceed £4 valuation, between £4 and £10, between £10 and £15, &c., &c. in each electoral division, in each union, and finally in the entire county. Each electoral division that is scheduled as congested is distinguished by an asterisk, and at the end of the table the total is given for all the congested electoral divisions and for all the non-congested electoral divisions in the county. The other three tables are arranged in exactly the same manner; the second shows the total area occupied by the holdings of each class; the third shows the total valuation of the holdings of each class; and the fourth the total population living on the holdings of each class.

As special importance may be attached to the figures relating to the congested districts, the following summary tables have been prepared:—

I.—Table showing Total Number of Holdings and Number of each of Eleven Classes, arranged according to Valuation, in the Congested Districts.

County.	Total Number of Holdings.	Classification of Holdings, and Number in each Class.										
		Not exceeding £4.	Above £4 and not exceeding £10.	Above £10 and not exceeding £15.	Above £15 and not exceeding £20.	Above £20 and not exceeding £30.	Above £30 and not exceeding £40.	Above £40 and not exceeding £50.	Above £50 and not exceeding £100.	Above £100 and not exceeding £200.	Above £200 and not exceeding £300.	Above £300 in value.

The importance of the statistics contained in this volume—both as regards congested and non-congested areas—is fairly obvious. Now for the first time from an official publication it is possible accurately to estimate the agricultural congestion existing not only in the large area of a county—as could have been done from the Census Returns—but also in the small area of an electoral division.* Thus it is possible to know not only the number of holdings in any one electoral division which do not exceed, say, £10 valuation, their total valuation, the acreage over which they extend, and the population that live upon them; but it is also possible to ascertain exactly how much land is required in order to enlarge such holdings up to any given limit, say, £10 valuation. It is also possible to ascertain whether there are any large holdings in that electoral division above, say, £50, £100, £200, or £300 valuation, part of which might possibly be acquired for the purpose of enlarging the small holdings, and these returns also show the exact acreage and valuation of such classes of holdings in each electoral division as well as the population which they now support.

It is also possible to ascertain what is the proportion that the number of holdings not exceeding, say, £10 valuation bears to the total number of holdings not only in the entire county, but also in any particular district. The importance of this is pretty apparent, for whilst the ratio is no complete index to congestion, it is, *ceteris paribus*, a useful guide.† Thus the number of holdings not exceeding £4, and not exceeding £10 valuation in the congested districts are 53 per cent., and 87 per cent. of the total number of holdings in the districts, whilst the number of holdings not exceeding £4, and £10 in the non-scheduled areas of the counties containing congested districts are 23 per cent., and 54 per cent. of the total number of holdings in these areas. These figures show at once that whilst there is congestion outside the scheduled areas, it is not as a whole comparable with the congestion existing within these areas, and the fact that the statistics are published by electoral divisions makes it possible to localise at once—so far as the valuation of the holding is a test—the spots outside the scheduled areas where the condition of the people corresponds to that existing over the greater part of the congested districts.

Interpretation of Figures.

The interpretation of the figures contained in this volume was touched upon in a memorandum submitted to the Commission by the Secretary, and printed in the Appendices to the First Report of the Commission [Cd. 3267—1906], pp. 351 *et seq.* It will suffice to remark here that, though these tables are nominally returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Galway six holdings valued at £2, £4, £6, £10, £20, and £40; a return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Galway one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns, where one man has several holdings in County Galway but in different electoral divisions, or has one holding which runs into two electoral divisions, the total area, population and valuation are allocated to the division containing the holding or the part of the holding of the highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Galway), and may exclude land geographically belonging to the division itself. Thus, the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or

* The importance of having information for the smaller areas is readily seen from a single illustration. The number of holdings not exceeding £4 valuation in Co. Galway is 41 per cent. of the total number of holdings. This in itself might not seem to indicate very acute congestion in Galway, though it is considerably higher than the proportion for the whole of Ireland (27 per cent.); but when we look at the figures relating to some of the Electoral Divisions in the Unions of Clifden and Oughterard and find that in them the holdings not exceeding £4 are 80 per cent. and 90 per cent. of the total, the existence of very acute congestion is at once recognised and also its precise location.

† The ratio of valuation to population, or the ratio between the number of small holdings and the number of large holdings can be regarded as a complete guide to the congestion or poverty of any particular district only (1) when the people are entirely dependent on the land for their living, that is, where there are no supplementary industries, such as fishing, weaving, &c., and (2) when the valuation is based on the present productivity of the land. The valuation of Ireland was, however, made between forty-five and fifty-five years ago, and was not even then uniform throughout Ireland, and does not allow for any improvement or deterioration that may since have taken place.

valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, when the compilation of these statistics was under discussion, considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, and decided that the unadjusted returns of landholders by electoral divisions would be the most useful.

Comparison between Census Returns and Agricultural Statistics.

It may be of interest to point out that information about the number of holdings and occupiers, classified according to acreage, is also contained in the Yearly Agricultural Statistics, which were issued formerly by the same office as the Census Returns, but which since 1900 have been issued by the Department of Agriculture and Technical Instruction. In 1901, according to these Returns, the number of holdings was 590,175 (A) and the number of occupiers was 543,238 (B), whilst the number of holdings, according to the Census returns (contained in this volume) was 490,301 (C). The discrepancies are for the most part easily explained. The Census figures, as has been already mentioned, though nominally returns of holdings, are really returns of landholders, and therefore (C) is properly comparable with (B) and not with (A), as might be imagined. The explanation of most of the difference between (B) and (C) is that the latter return is confined to agricultural holdings, and the former includes labourers' cottage holdings and gardens. Hence the difference between (B) and (C) in respect of holdings not exceeding one acre is over 45,000. Some of the discrepancies cannot, however, be thus explained, as this explanation can only refer to small holdings, and there are differences between B and C as regards every size of holding, as is shown by the following statement:—

	Number of Occupiers holding Land in Ireland.					
	Above 15 and not exceeding 30 Acres.	Above 30 and not exceeding 50 Acres.	Above 50 and not exceeding 100 Acres.	Above 100 and not exceeding 200 Acres.	Above 200 and not exceeding 500 Acres	Above 500 Acres.
According to B, .	120,642	67,878	54,168	22,841	8,917	2,202
According to C, .	118,749	67,014	54,501	23,086	9,089	2,249

The explanation of most of these apparent discrepancies appears to be that the Census Returns, which are primarily concerned with the statistics of population, contain more complete information as regards the number of persons having more than one holding than do the Agricultural Statistics, which are, of course, more concerned with the crops grown on farms than with the number of individual occupiers. Hence, owing to the more complete information collected for the purposes of the Census about persons having two or more holdings, the number of occupiers of small farms is less, and the number of occupiers of large farms is greater, in the Census Returns than in the Agricultural Statistics.

WALTER CALLAN,
Secretary.

19*th August*, 1907.

COUNTY OF GALWAY.

I.—Table showing Total Number of Holdings and Number of each of Eleven Classes, arranged according to Valuation, in the County of Galway.

Unions and Electoral Divisions.	Total Number of Holdings	Classification of Holdings, and Number in each Class.										
		Not exceeding £4.	Above £4 and not exceeding £10.	Above £10 and not exceeding £15.	Above £15 and not exceeding £20.	Above £20 and not exceeding £30.	Above £30 and not exceeding £40.	Above £40 and not exceeding £50.	Above £50 and not exceeding £100.	Above £100 and not exceeding £200.	Above £200 and not exceeding £300.	Above £300 in value.
